### ■ DESCRIPTIONS

The MB85R256 is an FRAM (Ferroelectric Random Access Memory) chip in a configuration of 32,768 words x 8 bits, using the ferroelectric process and silicon gate CMOS process technologies for forming the nonvolatile memory cells.

Unlike SRAM MB85R256 is able to retain data without back-up battery.

The memory cells used for the MB85R256 has improved at least  $10^{10}$  times of read/write access per bit, significantly outperforming FLASH memory and EEPROM in durability.

The MB85R256 uses a pseudo - SRAM interface compatible with conventional asynchronous SRAM.
