## F<sup>2</sup>MC-8L MB89550A Series

### MB89557A/558A/P558A/PV550A

#### ■ DESCRIPTION

The MB89550A series is a general-purpose, single-chip microcontroller that features a compact instruction set and contains a range of peripheral functions including a dual-clock control system, 5-level operating speed control, LCD controller driver, A/D converter, D/A converter, timer, serial interface, PWM timer, PWC timer, and external interrupts. The LCD controller driver is particularly suited for simultaneous control of LCD duty drive and static drive functions.

#### ■ FEATURES

- **Range of package options**
  - LQFP package (0.5 mm pitch)
  - TQFP package (0.4 mm pitch)
- **High speed operation at low voltage**
  - Minimum instruction execution time 0.32  $\mu$ s (for 12.5 MHz oscillation)
- **F<sup>2</sup>MCR-8L CPU core**
  - Instruction set optimized for controller applications
  - Multiplication and division instructions
  - 16-bit arithmetic operations
  - Bit test branch instructions
  - Bit manipulation instructions, etc.

(Continued)

#### ■ PACKAGE

# MB89550A Series

(Continued)

- **Dual-clock control system**

- Main clock 12.5 MHz maximum : (Four speed settings available, oscillation halts in sub-clock mode)
- Sub-clock 32.768 kHz : (Operation clock for sub-clock mode)

- **11 timer systems**

- 8/16-bit timer counter 1 (square wave output, 2-channel output switching available)
- 8/16-bit timer counter 2 (square wave output, 2-channel output switching available)
- 16-bit timer counter (also functions as event counter)
- 8-bit PWM timer (8-bit PWM timer  $\times$  2 channels or PPG timer  $\times$  1 channel, includes event counter function)
- 8-bit PWC timer (8-bit PWC timer  $\times$  1 channel)
- 6-bit PPG timer (6-bit PPG timer  $\times$  1 channel)
- 21-bit timebase timer
- Clock prescaler (17-bit)

- **UART/serial interface**

- UART/SIO switching

- **UART**

- Clock synchronous/asynchronous switching available

- **10-bit A/D converter**

- 10-bit A/D  $\times$  8 channels

- **8-bit D/A converter**

- 8-bit D/A  $\times$  2 channels

- **External interrupts**

- Eight independent inputs can be used for recovery from low-power consumption modes (selection of rising, falling, or both edge detection functions).
- Eight independent inputs can be used for recovery from low-power consumption modes (L level detection function included).

- **Clock output functions**

- High speed clock signal multiplied by 2 available as output from HCLK pin.
- Low speed clock pulse output available from LCLK pin.

- **LCD controller driver**

- 32SEG  $\times$  4COM (maximum 128 pixels)
  - 8 dedicated to segment output only
  - 8 for port or segment use
  - 16 for port, segment, or static use
- Built-in step-up power supply for driving LCD (optionally available)

- **Low-power consumption modes (standby modes)**

- Stop mode (all oscillations halt in sub-clock mode, current consumption falls to almost zero)
- Sleep mode (the CPU stops to reduce current consumption to approximately 1/3 of normal)
- Clock mode (all operations other than the clock prescaler halt, current consumption is very low)
- Sub clock mode (systems operate on sub-clock signals)

- **Maximum 66 I/O ports**

- General-purpose I/O ports (N-ch open drain) : 4
- General-purpose I/O ports (N-ch open drain) : 24
- [also function as LCD ports, with restrictions]
- General purpose I/O ports (CMOS) : 38

Classification		One-time product	Mask ROM product	Mask ROM product	Evaluation product
CPU functions		Number of instructions : 136 Instruction bit length : 8-bit Instruction length : 1 to 3bytes Data bit length : 1-, 8-, 16-bits Minimum execution time : 0.32 μs (at 12.5 MHz) Interrupt processing time : 2.88 μs (at 12.5 MHz)			
Peripheral Functions	Ports		Output-only ports (N-ch open drain) General-purpose I/O ports (N-ch open drain) General-purpose I/O ports (CMOS)		
	8/16-bit timer counter 1		2-channel 8-bit timer/counter operation (also functions as 1-channel 16-bit timer) with square wave output function		
	8/16-bit timer counter 2		2-channel 8-bit timer/counter operation (also functions as 1-channel 16-bit timer) with square wave output function		
	16-bit timer counter		16-bit timer/counter operation, 16-bit event counter operation		
	PPWM timer		2-channel 8-bit PWM timer operation (also functions as 1-channel PPG timer) with event counter function		
	PWC timer		1-channel 8-bit PWC timer operation		
	6-bit PPG timer		1-channel 6-bit PWM timer operation		
	LCD controller driver		Maximum 32SEG $\bar{A}$ ~4COM (some ports provide selection of DUTY drive/STATIC drive/N-ch open drain I/O port functions)		
	UART	SIO	Switchable between UART (with clock synchronous/asynchronous data transfer function) and SIO (simple serial)		
	UART/SIO		Data transfer function for UART/SIO		
	A/D converter		8-channel 10-bit resolution		
	D/A converter		2-channel, 8-bit resolution		
	Clock output		High speed clock multiplied×2, and sub clock output available		
Standby modes		Sub clock mode, sleep mode, clock mode, and stop mode			

\* : The MB89PV550A provides only evaluation functions (functions for use with emulation tools). This model cannot use piggyback functions (functions for use with E<sup>2</sup>PROM).

## ■ OPTIONS AND CORRESPONDING PRODUCTS

		-201 Options	-202 Options	-203 Options
LCD step-up circuit		No step-up circuit	Step-up circuit included	
PORT/SEG dual-use pin selection		SEG8 to SEG31 : SEG/PORT dual use	SEG8 to SEG31 : SEG/PORT dual use	SEG8 to SEG21 : SEG/PORT dual use SEG22 to SEG31 : N-ch open drain*1
Model type	Evaluation model	MB89PV550A-201	MB89PV550A-202	MB89PV550A-203
	One-time model	MB89P558A-201	MB89P558A-202	MB89P558A-203
	Mask ROM model*2	MB89557A	MB89557A	MB89557A
		MB89558A	MB89558A	MB89558A

\*1 : The SEG22-SEG31 pins (N-ch open drain) are not subject to the restriction that input voltage ( $V_{IN}$ ) must be less than the voltage at the V3 pin.

\*2 : Options may be specified at the time of mask ROM ordering.

## ■ OSCILLATOR STABILIZATION WAIT TIME SELECTION

The MB89557A/558A allow a selection of default value for oscillator stabilization wait time, to be selected at the time of mask ROM ordering.

Oscillator stabilization wait time selection	Remarks
$2^{14}/F_{CH}$	1.31 ms (at F = 12.5 MHz)
$2^{17}/F_{CH}$	10.48 ms (at F = 12.5 MHz)
$2^{18}/F_{CH}$	20.97 ms (at F = 12.5 MHz)

## ■ DIFFERENCES AMONG PRODUCTS AND PRECAUTIONS FOR MODEL SELECTION

### • Package and Model Combinations

Package \ Models	MB89PV550A	MB89P558A	MB89557A MB89558A
FPT-100P-M05 (LQFP-100 0.5 mm pitch)	×	○	○
FPT-100P-M18 (TQFP-100 0.4 mm pitch)	×	○	○
MQP-100C-P02 (MQFP-100 0.5 mm pitch)	○	×	×

Note : Compatible with all options (-201/202/203) .

### • Memory Space

- When evaluating chips using piggyback evaluators etc., please take note of the differences among products before making the evaluation.

### • Current Consumption

- When operating at low speed, one-time PROM and EPROM products will consume more current than mask ROM products. However, the current consumption in sleep/stop modes is the same.
- For specific details about each package, see "■ PACKAGE DIMENSIONS".
- For details about power consumption, see "■ ELECTRICAL CHARACTERISTICS" .

### • Mask Options

- The available options, and methods of using options, differ according to the model. Be sure to confirm the options from the "■ MASK OPTIONS" section.

### • LCD Drive Step-up Power Circuit

The MB89550A series is available with or without the step-up circuit option as a mask option.

### • Power Supply Path

The models in the MB89550A series have two power supply pins,  $V_{CC1}$  and  $V_{CC2}$ , with power supply paths that differ according to the model.

Models	Supply pin	Power supply path
MB89557A/ 558A	$V_{CC1}$	3V power supply pin for internal resource operation, including the CPU.
	$V_{CC2}$	5V power supply pin for input/output ports.
MB89P558A	$V_{CC1}$	$V_{PP}$ pin for on-board writing.
	$V_{CC2}$	V power supply pin for internal resource operation, including the CPU, and for input/output pins.
MB89PV550A	$V_{CC1}$	Internally shut off, operates as input to $V_{CC2}$ only.
	$V_{CC2}$	5V power supply pin for internal resource operation, including the CPU, and for input/output pins.

### • Oscillator Startup and Power-on Reset

On the MB89PV550A and MB89P558A, oscillator startup and power-on reset are applied at the rise of the  $V_{CC2}$  input. On the MB89558A and MB89557A, oscillator startup and power-on reset are applied at the rise of the  $V_{CC1}$  input.

# MB89550A Series

- Wide Register Functions

The space available for use of wide register functions is as follows.

MB89PV550A	2000 <sub>H</sub> to FFFF <sub>H</sub>
MB89P558A	4000 <sub>H</sub> to FFFF <sub>H</sub>
MB89558A	4000 <sub>H</sub> to FFFF <sub>H</sub>
MB89557A	8000 <sub>H</sub> to FFFF <sub>H</sub>

- The P40, P41, P84, P85 Pins

On the MB889PV550A, an external oscillator signal equivalent to 64 clock pulses is required to initialize the P40, P41, P84, and P85 pins. Note therefore that at power-on there is an interval in which the values of these ports is undefined.

On the MB89P558A, MB89558A, and MB89557A, these ports are set to "Hi-Z" status at power-on.

## ■ PIN ASSIGNMENTS

# MB89550A Series

## ■ PIN DESCRIPTION

Pin No.	Pin Name	Circuit Type	Function
1	SEG05	H	Segment output pins for LCDC duty drive.
2	SEG06	H	
3	SEG07	H	
4	P50/ SEG08	G	N-ch open drain I/O pin. Also functions as a segment output pin for LCDC duty drive.
5	V <sub>SS</sub>	—	Power supply (GND) pin.
6	P51/ SEG09	G	N-ch open drain I/O pins. Also function as segment output pins for LCDC duty drive.
7	P52/ SEG10		
8	P53/ SEG11		
9	P54/ SEG12		
10	P55/ SEG13		
11	P56/ SEG14		
12	P57/ SEG15		
13	P60/ SEG16	G	N-ch open drain I/O pins. Also function as segment output pins for LCDC duty drive or static drive.
14	P61/ SEG17		
15	P62/ SEG18		
16	P63/ SEG19		
17	P64/ SEG20		
18	P65/ SEG21		
19	P66/ SEG22		
20	P67/ SEG23		
21	P70/ SEG24		
22	P71/ SEG25

# MB89550A Series

Pin No.	Pin Name	Circuit Type	Function
23	P72/ SEG26	G	N-ch open drain I/O pins. Also function as segment output pins for LCDC duty drive or static drive.
24	P73/ SEG27		
25	P74/ SEG28		
26	P75/ SEG29		
27	P76/ SEG30		
28	P77/ SEG31		
29	AVR	—	A/D converter reference voltage input pin.
30	AV <sub>CC</sub>	—	A/D converter and D/A converter power supply pin.
31	P07/AN7	D	General purpose I/O ports. Also function as analog input pins.
32	P06/AN6		
33	P05/AN5		
34	P04/AN4		
35	P03/AN3		
36	P02/AN2		
37	P01/AN1		
38	P00/AN0		
39	AV <sub>SS</sub>	—	A/D converter and D/A converter power supply pin (GND).
40	P17/ $\overline{\text{INT17}}$	E	General purpose I/O ports. Also function as external interrupt 1 input pins. External interrupt 1 input signals are hysteresis signals (edge detection).
41	P16/ $\overline{\text{INT16}}$		
42	P15/ $\overline{\text{INT15}}$		
43	P14/ $\overline{\text{INT14}}$		
44	P13/ $\overline{\text{INT13}}$		
45	P12/ $\overline{\text{INT12}}$		
46	P11/ $\overline{\text{INT11}}$		
47	V <sub>CC2</sub>	—	Power supply (5V) pin.
48	P10/ $\overline{\text{INT10}}$	E	General purpose I/O port. Also functions as an external interrupt 1 input pin. External interrupt 1 input signals are hysteresis signals (edge detection).
49	RST	I	Reset input pin.
50	X0A	A	Crystal oscillator pins (32 KHz) .
51	X1A		

(Continued)

# MB89550A Series

Pin No.	Pin Name	Circuit Type	Function
52	MODA	F	Operating mode setting pin.
53	X0	A	Crystal oscillator pins (Max12.5 MHz) .
54	X1		
55	P80/ $\overline{\text{INT24}}$	E	General purpose I/O port. Also functions as an external interrupt 2 input pin. External interrupt 2 input signals are hysteresis signals (level detection).
56	V <sub>ss</sub>	—	Power supply (GND) pin.
57	P81/ $\overline{\text{INT25}}$	E	General purpose I/O ports. Also function as external interrupt 2 input pins. External interrupt 2 input signals are hysteresis signals (level detection).
58	P82/ $\overline{\text{INT26}}$		
59	P83/ $\overline{\text{INT27}}$		
60	P20/UI	E	General purpose I/O ports. Also function as 8-bit serial I/O pins.
61	P21/UO	B	
62	P22/UCK	E	
63	P23/PPG1	B	General purpose I/O port. Also functions as the 6-bit PPG timer output.
64	P24/ $\overline{\text{INT20}}$	E	General purpose I/O ports. Also function as external interrupt 2 input pins. External interrupt 2 input signals are hysteresis signals (level detection).

## ■ HANDLING DEVICES

- Maximum rated voltage (Prevention of latchup)  
Be careful never to exceed maximum rated voltages.  
In CMOS IC devices, a condition known as latch-up may occur if voltages higher than  $V_{CC}$  or lower than  $V_{SS}$  are applied to input or output pins other than medium- or high-voltage pins, or if the voltage applied between  $V_{CC}$  and  $V_{SS}$  exceeds the rated voltage level.  
When latch-up occurs, the power supply current increases rapidly resulting in thermal damage to circuit elements. Therefore it is necessary to ensure that maximum ratings are not exceeded in circuit operation.  
Similarly, when turning the analog power supply on or off, it is necessary to ensure that the analog power supply voltages ( $AV_{CC}$ ,  $AVR$ , and  $DVR$ ) and analog input voltages do not exceed the digital power supply ( $V_{CC}$ ).
- Power supply voltages  
Power supply voltages should be kept as stable as possible.  
Rapid fluctuation of the voltage may cause the device to operate abnormally, even if the voltage remains within the allowed operating range.  
As a standard for power supply voltage stability, it is recommended that the peak-to-peak  $V_{CC}$  ripple voltage at commercial supply frequency (50 Hz to 60 Hz) be 10% or less of  $V_{CC}$ . Also when the power supply is turned on or off the transient voltage fluctuation be no more than 0.1V/ms or less.
- Treatment of unused input pins  
Leaving unused input pins unconnected can cause abnormal operation. Unused input pins should always be pulled up or down.
- Treatment of N.C. pins  
N.C. (not connected) pins should always be left open.
- Treatment of power supply pins on devices with A/D or D/A converters  
Even when the A/D or D/A converters are not in use, be sure to make the necessary connections to ensure that  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVR = DVR = V_{SS}$ .
- Precautions on using an external clock  
An oscillation stabilization delay occurs after a power-on reset or when recovering from sub-clock or stop mode, even if an external clock is used.
- Treatment of unused dedicated LCD pins  
Dedicated SEG output pins should be left open when not in use.
- Handling of ports also used as segment pins  
When a port is used as a segment pin, take care to ensure that the voltage applied to the pin does not exceed  $V_3$  (the segment drive voltage). This precaution is particularly necessary in models with step-up voltage circuits. Note also that after power-on or during a reset, an "L" level default signal is output from the segment/port pin.
- Treatment of unused LCD pins  
Connect the  $V_3$  pin to  $V_{CC2}$ . The other dedicated LCD pins  $V_0$ ,  $V_1$ ,  $V_2$ ,  $C_0$ , and  $C_1$  should be pulled down.
- Executing programs on RAM  
When programs are executed on RAM, debugging cannot be performed even with the use of the MB89PV550A.
- Wild register functions  
Wild registers cannot be debugged with the MB89PV550A or tools. To verify operation, use the MB89P558A and perform in-place testing.

# MB89550A Series

## ■ PROGRAMMING SPECIFICATIONS FOR ONE-TIME PROM PRODUCTS

The MB89P558A has a "PROM mode" with functions equivalent to the MBM27C1001, that enables the micro-controller to be programmed by writing from a general-purpose ROM programmer with the use of a special adapter. Note however that electronic signature mode is not available.

### ROM Programmer Adapters

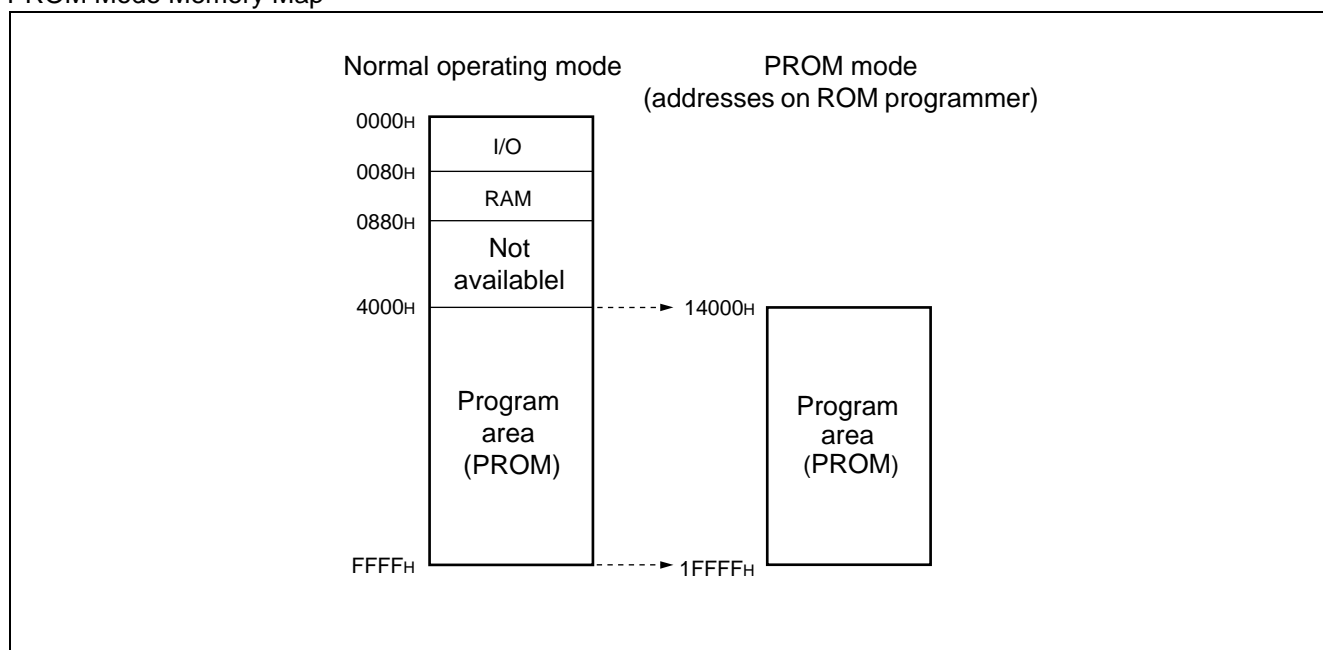

With some ROM programmers the insertion of approximately 0.1 $\mu$ F capacitance between V<sub>PP</sub> and V<sub>SS</sub> or between V<sub>CC</sub> and V<sub>SS</sub> allows more stable writing performance. The following table lists ROM programmer adapters.

### ROM Programmer Adapters

Part No.	Package	Adapter Part No.
MB89P558A	FPT-100P-M05	ROM-100SQF-32DP-8LA2
	FPT-100P-M18	ROM-100SQF-32DP-8LA

- Inquiries  
Sun Hayato Co., Ltd. : TEL 03-3986-0403
- PROM Mode Memory Map  
The PROM mode memory map is shown below.

### PROM Mode Memory Map

- EPROM Programming Procedure

- 1) Set the EPROM programmer type to MBM27C1001.
- 2) Load the program data into addresses 14000<sub>H</sub> to 1FFFF<sub>H</sub> in the EPROM programmer.
- 3) Use the EPROM programmer to program to addresses 14000<sub>H</sub> to 1FFFF<sub>H</sub>.

- Recommended Screening Conditions

High-temperature aging is the recommended method of screening unprogrammed one-time PROM microcontrollers before mounting.

The flow of the screening process is shown below.

## Screening Flow

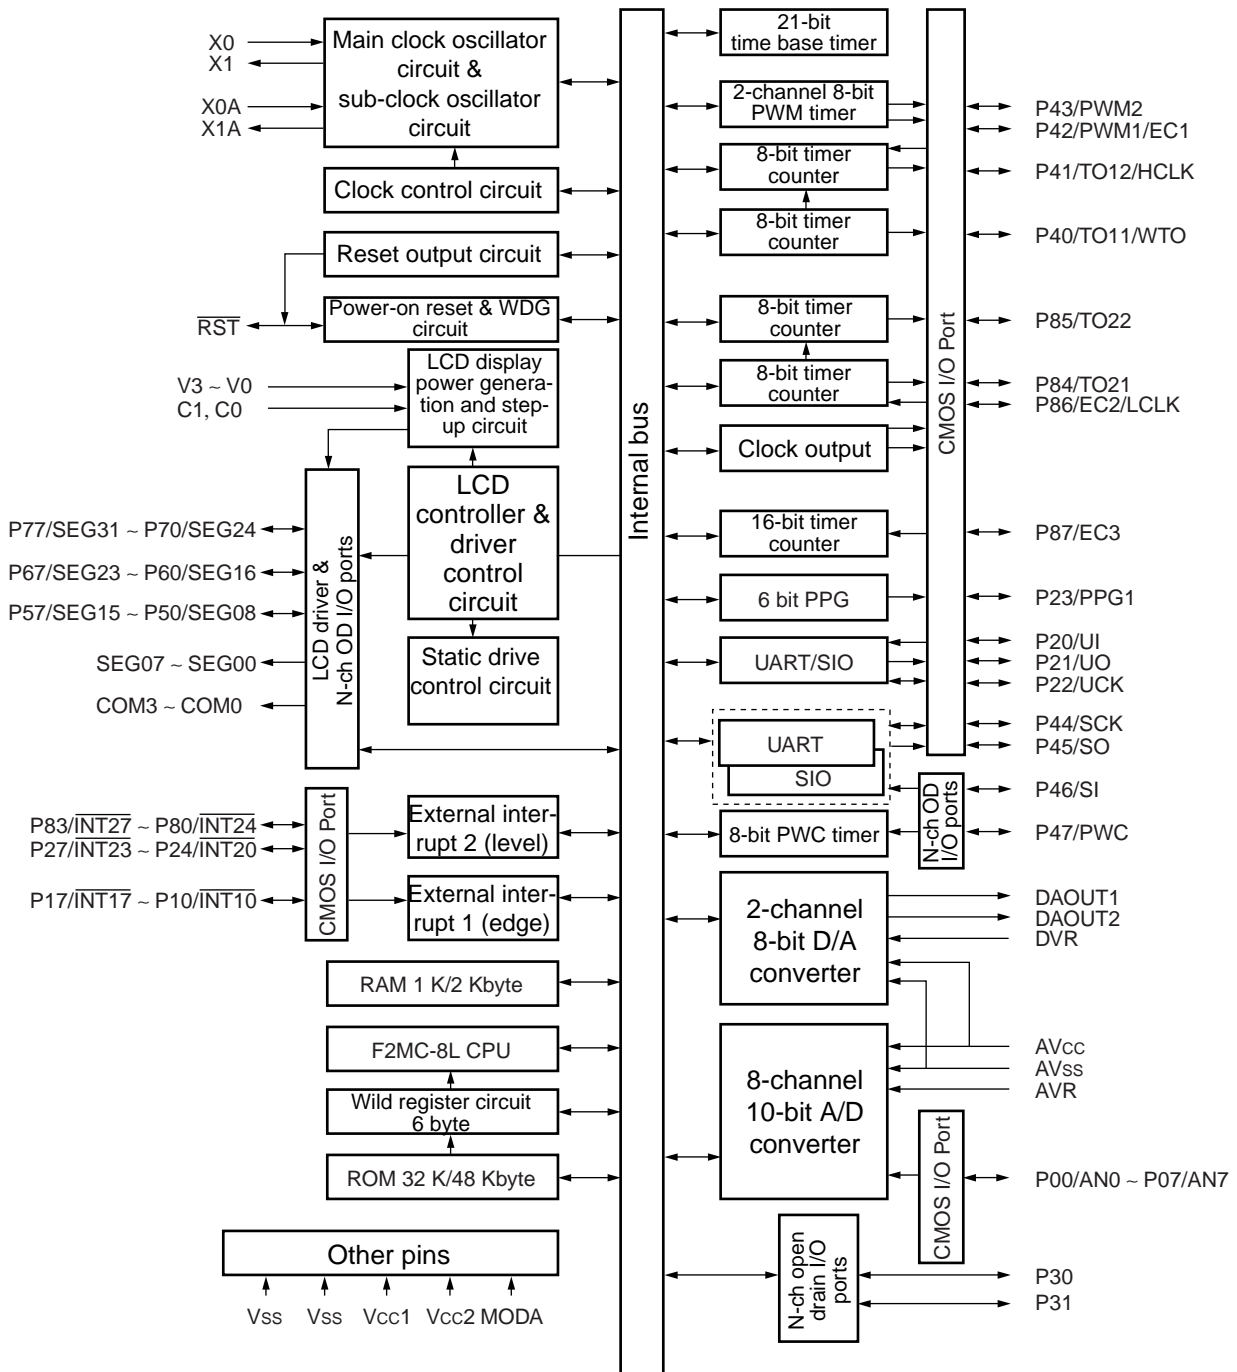

- About Writing Yields

The nature of chips before one-time writing of microcontroller programs to PROM prevents the use of all-bit writing tests. Therefore it is not possible to guarantee writing yields of 100% in some cases.

# MB89550A Series

## ■ BLOCK DIAGRAM

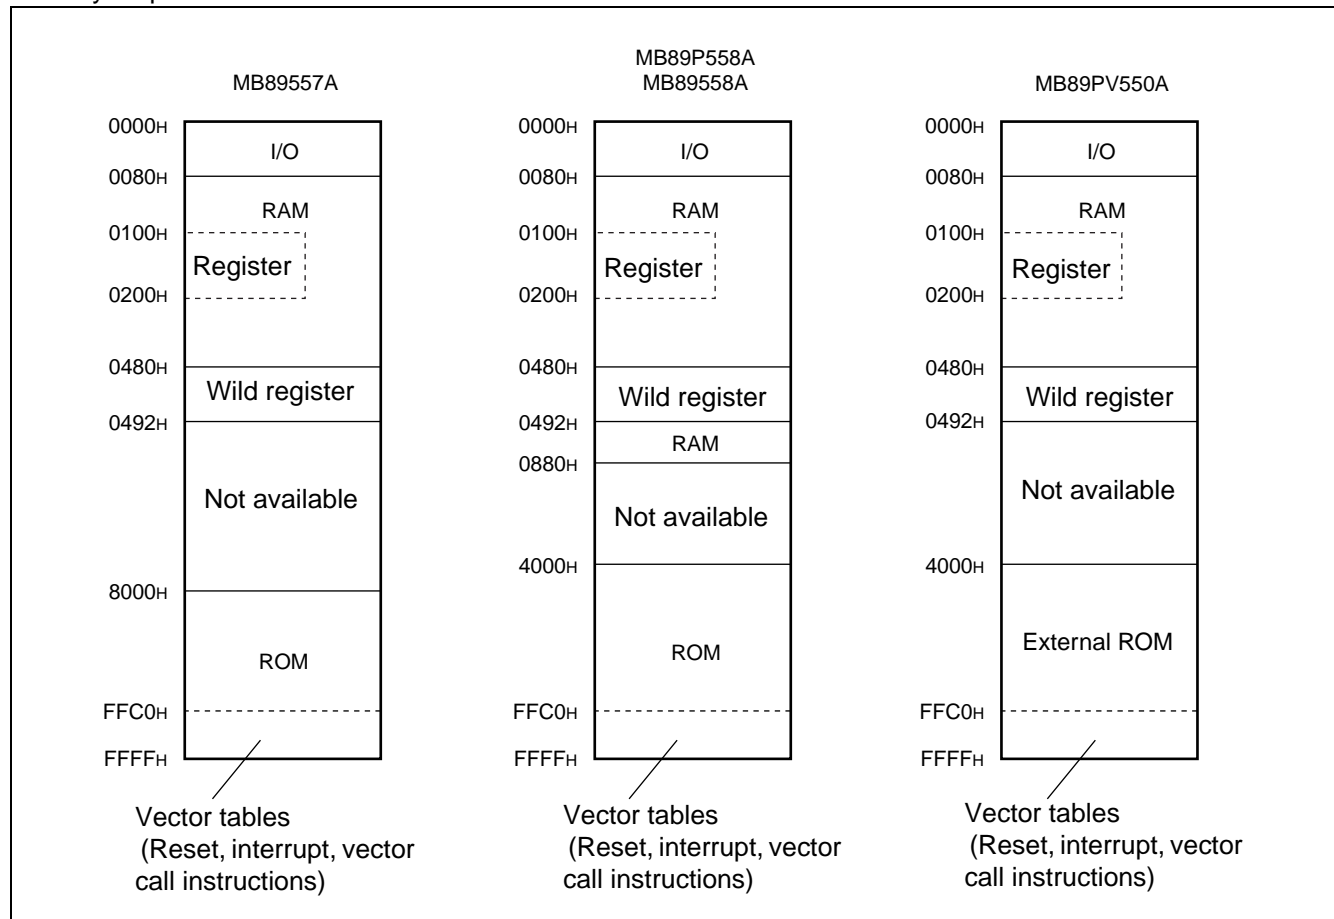

## ■ CPU CORE

### Memory space

The MB89550A has 64 Kbytes of memory space, composed of the I/O area, RAM area, ROM area, and external area. The memory space includes general purpose registers, as well as areas used for special purposes such as vector tables.

- I/O Area (address : 0000<sub>H</sub> to 007F<sub>H</sub>)
  - This area is allocated to control registers and data registers for internal peripheral functions.
  - Because the I/O area is part of memory space, it can be accessed in the same ways. Direct addressing provides faster access.
- RAM Area
  - Static RAM is provided for use as an internal data area.
  - The size of internal RAM differs between product models.
  - High speed access is available to addresses 80<sub>H</sub> to FF<sub>H</sub> using direct addressing (the area available for use is restricted on some models).
  - Addresses 100<sub>H</sub> to 1FF<sub>H</sub> are used as the general-purpose register area.
  - If a reset is applied during writing to RAM, the value of data at the target addresses is not assured.
- ROM Area
  - ROM is provided for use as the internal program area.
  - The size of internal ROM differs between product models.
  - Addresses FFC0<sub>H</sub> to FFFF<sub>H</sub> are used for special purpose data such as vector tables.

### ○ Read/write notation

- R/W : Reading and writing enabled
- R : Read-only
- W : Write only

### ○ Initial value notation

- 0 : Initial value of bit is "0".
- 1 : Initial value of bit is "1".
- X : Initial value of bit is undefined.

Note : Areas indicated as "unused area" are not to be used.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

(AVSS = VSS = 0 V)

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage	V <sub>CC1</sub>	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 4.0	V	V <sub>CC1</sub> not to exceed V <sub>CC2</sub> .*
	V <sub>CC2</sub>	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0		
A/D converter reference input voltage	AVR	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0	V	
D/A converter reference input voltage	DVR	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0	V	
LCD power supply voltage	V0-V3	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0	V	On models without step-up circuits V0-V3 are not to exceed V <sub>CC2</sub> .
Input voltage	V <sub>I1</sub>	V <sub>SS</sub> – 0.3	V <sub>CC2</sub> + 0.3	V	Pins other than P50 to P57, P60 to P67, P70 to P77, P46, P47, P30, P31
	V <sub>I2</sub>	V <sub>SS</sub> – 0.3	V3	V	P50 to P57, P60 to P67, P70 to P77
	V <sub>I3</sub>	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0	V	P46, P47, P30, P31
Output voltage	V <sub>O1</sub>	V <sub>SS</sub> – 0.3	V <sub>CC2</sub>	V	Pins other than P50 to P57, P60 to P67, P70 to P77, P46, P47, P30, P31
	V <sub>O2</sub>	V <sub>SS</sub> – 0.3	V3	V	P50 to P57, P60 to P67, P70 to P77
	V <sub>O3</sub>	V <sub>SS</sub> – 0.3	V <sub>SS</sub> + 6.0	V	P46, P47, P30, P31
“L” level maximum output current	I <sub>OL1</sub>	—	15	mA	Pins other than P22/UCK, P23/PPG1
	I <sub>OL2</sub>	—	30	mA	P22/UCK, P23/PPG1
“L” level average output current	I <sub>OLAV1</sub>	—	4	mA	Pins other than P22/UCK, P23/PPG1 average value (operating current × operating ratio)
	I <sub>OLAV2</sub>	—	15	mA	P22/UCK, P23/PPG1 average value (operating current × operating ratio)
“L” level total maximum output current	ΣI <sub>OL</sub>	—	100	mA	
“L” level total average output current	ΣI <sub>OLAV</sub>	—	60	mA	average value (operating current × operating ratio)
“H” level maximum output current	I <sub>OH1</sub>	—	–15	mA	Pins other than P22/UCK, P23/PPG1
	I <sub>OH2</sub>	—	–30	mA	P22/UCK, P23/PPG1

(Continued)

(Continued)

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
“H” level average output current	$I_{OHAV}$	—	−4	mA	Pins other than P22/UCK, P23/PPG1 and open drain output pins average value (operating current × operating ratio)
	$I_{OHAV}$	—	−15	mA	P22/UCK, P23/PPG1 average value (operating current × operating ratio)
“H” level total maximum output current	$\Sigma I_{OH}$	—	−50	mA	
“H” level total average output current	$\Sigma I_{OHAV}$	—	−30	mA	average value (operating current × operating ratio)
Power consumption	$P_D$	—	300	mW	
Operating temperature	$T_A$	−40	+85	°C	
Storage temperature	$T_{stg}$	−55	+150	°C	

\* : Set  $AV_{CC}$  to the same potential as  $V_{CC}$ .  
Also ensure that AVR and DVR do not exceed  $AV_{CC} + 0.3$  V.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

# MB89550A Series

## 2. Recommended Operating Conditions

(AVSS = VSS = 0 V)

Item	Symbol	Rating		Unit	Remark
		Min	Max		
Power supply voltage*3	V <sub>CC1</sub>	2.2*1	3.6	V	Guaranteed normal operating range (MB89557A/558A)
	V <sub>CC2</sub>	2.2*1	5.5	V	
	V <sub>CC1</sub>	—	—	V	Guaranteed normal operating range (MB89P558A)
	V <sub>CC2</sub>	2.7*2	5.5	V	
	V <sub>CC1</sub> , V <sub>CC2</sub>	1.5	3.6	V	To maintain RAM state in stop mode
A/D converter reference voltage input*4	AVR	V <sub>CC1</sub>	AV <sub>CC</sub>	V	Guaranteed normal operating range
D/A converter reference voltage input*4	DVR	V <sub>CC1</sub>	AV <sub>CC</sub>	V	Guaranteed normal operating range
LCD supply voltage	V0-V3	V <sub>SS</sub>	V <sub>CC2</sub>	V	Models without step-up circuit, pins V0 to V3. LCD power supply range and maximum value are determined by the characteristics of the LCD display element used.
Operating temperature	T <sub>A</sub>	−40	+85	°C	

\*1 : The operating power supply voltage differs depending on the instruction cycle time of the operating frequency. See Figure 1.

\*2 : The operating power supply voltage differs depending on the instruction cycle time of the operating frequency. See Figure 2. Note also that on the MB89PV550A the input to the V<sub>CC1</sub> pin is cut off internally, and on the MB89P558A the V<sub>CC1</sub> pin is used as the V<sub>PP</sub> pin for on-board writing.

\*3 : AV<sub>CC</sub> and V<sub>CC2</sub> should be set to the same potential. Also, care must be taken to ensure that V<sub>CC1</sub> does not exceed V<sub>CC2</sub>.

\*4 : Care must be taken to ensure that the relation between AVR and DVR is such that "V<sub>CC1</sub> ≤ AVR (DVR) ≤ AV<sub>CC</sub> + 0.3 V".

Figure 1. Operating Voltage vs. Operating Frequency (MB89558A/557A)

Figure 2. Operating Voltage vs. Operating Frequency (MB89P558A)

# MB89550A Series

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

## 3. DC Characteristics

( $AV_{CC} = AVR = DVR = V_{CC2} = 5.0\text{ V}$ ,  $AV_{SS} = V_{SS} = 0\text{ V}$ ,  $T_A = -40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$ )

Parameter	Sym- bol	Pin name	Condition	Value			Unit	Remarks

			Min	Max		
Power supply rise time	$t_R$	—	0.05	50	ms	
Power supply cutoff time	$t_{OFF}$		1	—	ms	For repeated operation

Note : Be sure that the power supply rise time is less than the selected oscillator stabilization period. Also, when varying the supply voltage during operation, it is recommended that the supply voltage be increased gradually.

# MB89550A Series

## (3) Power Supply Voltage

Be sure that the power supply is set so that  $V_{CC2} \geq V_{CC1}$ .

The MB89PV550A and MB89P558A operate on the  $V_{CC2}$  power supply only.

On the MB89558A and MB89557A,  $V_{CC1}$  is the power supply for internal CPU operation, and  $V_{CC2}$  is the I/O power supply.

## (4) Clock Timing

\*3 : Stop mode

## (10) A/D Converter Glossary

- Resolution  
The level of analog variation that can be recognized by the A/D converter.
- Linearity error (Unit : LSB)  
The deviation between the actual conversion characteristics and the line linking the zero transition point ("00 0000 0000" ↔ "00 0000 0001") and the full-scale transition point ("11 1111 1110" ↔ "11 1111 1111") .
- Differential linearity error (Unit : LSB)  
The variation from the theoretical input voltage required to change the output code by 1 LSB.
- Total error (Unit : LSB)  
The total error is the difference between the actual value and the theoretical value.

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ (V)}$$

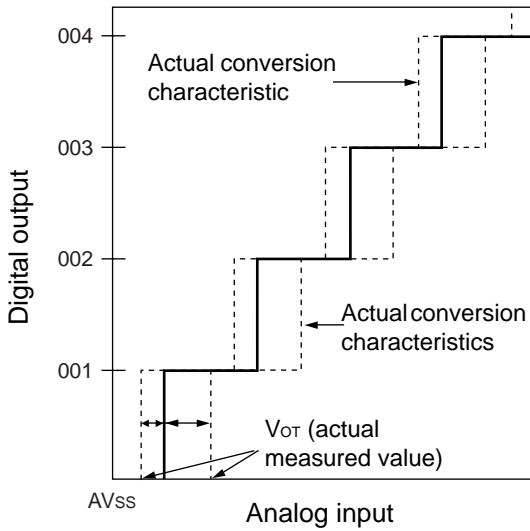

$$\text{Total error for digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + 0.5 \text{ LSB}\}}{1 \text{ LSB}}$$

(Continued)

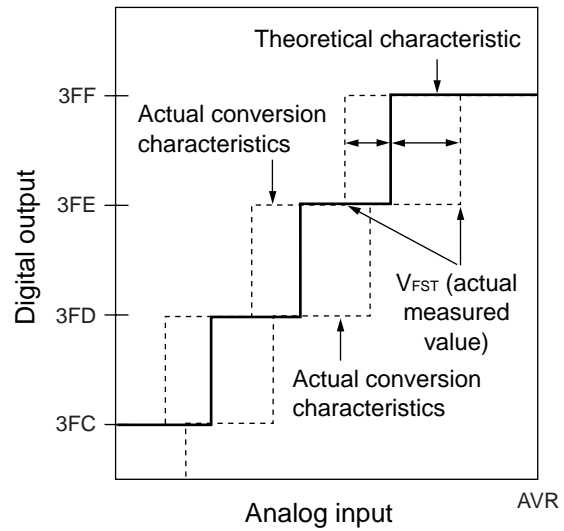

(Continued)

Zero transition error

Full-scale transition error

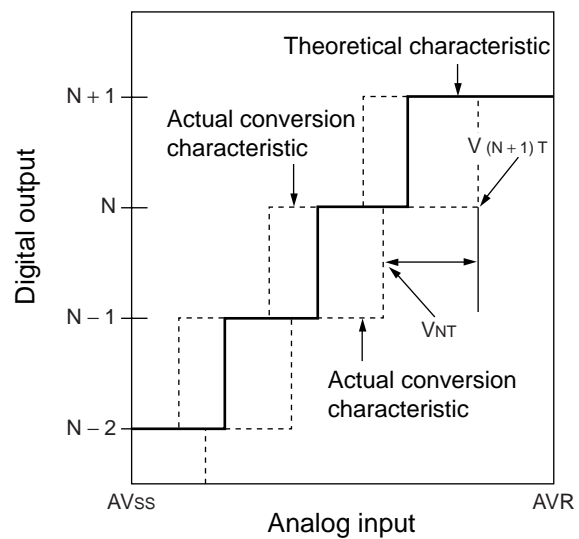

Linearity error

$$\text{Linearity error in digital output N} = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

Differential linearity error

$$\text{Differential linearity error in digital output N} = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

# MB89550A Series

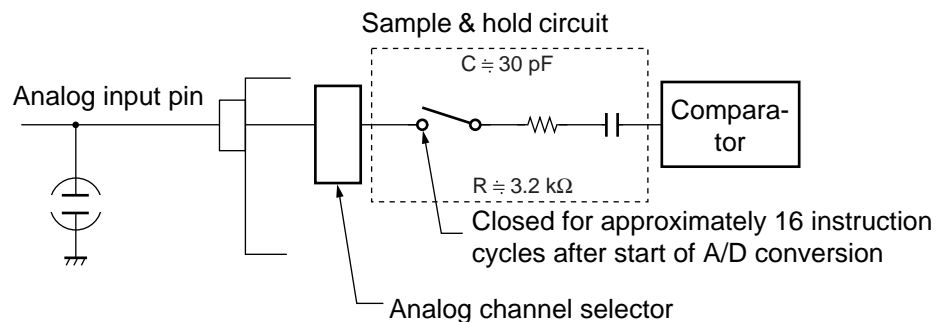

## (11) Notes for A/D Conversion

- Analog input pins and input impedance

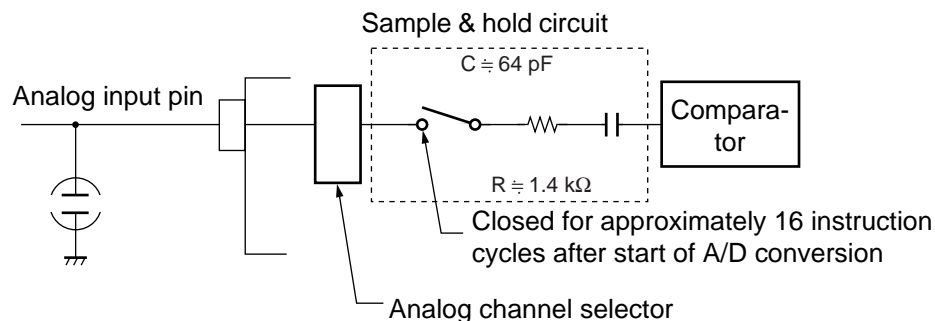

The A/D converter in the MB89550A series incorporates a sample & hold circuit as shown below. When an A/D conversion starts, the voltage at the analog input pin is captured by the sample & hold capacitor for a period of 16 instruction cycles.

Accordingly, if the output impedance of the external circuit connected to the analog input is high, the analog input voltage may not stabilize within the period of the analog input sampling time. Therefore, it is recommended that the output impedance of the external circuit be sufficiently low (10 k $\Omega$  or less) .

- Equivalent circuit for MB89558A and MB89557A analog input

- Equivalent circuit for MB89P558A and MB89PV550A analog input

- Error

The relative error increases as  $|AVR - AV_{ss}|$  becomes smaller.
