

8-bit Microcontroller

CMOS

F²MC-8FX MB95160M Series

MB95F168M/F168N/F168J/FV100D-103

■ DESCRIPTION

The MB95160M series is general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions.

Note : F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

■ FEATURE

- F²MC-8FX CPU core
 - Instruction set optimized for controllers
 - Multiplication and division instructions
 - 16-bit arithmetic operations
 - Bit test branch instruction
 - Bit manipulation instructions etc.
- Clock
 - Main clock
 - Main PLL clock
 - Sub clock
 - Sub PLL clock

(Continued)

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

MB95160M Series

(Continued)

- Timer
 - 8/16-bit compound timer × 2 channels
Can be used to interval timer, PWC timer, PWM timer and input capture.
 - 8/16-bit PPG × 2 channels
 - 16-bit PPG × 1 channel
 - Time-base timer × 1 channel
 - Watch prescaler × 1 channel
- LIN-UART × 1 channel
 - LIN function, clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- UART/SIO × 1 channel
 - Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- I²C* × 1 channel
 - Built-in wake-up function
- External interrupt × 8 channels
 - Interrupt by edge detection (rising, falling, or both edges can be selected)
 - Can be used to recover from low-power consumption (standby) modes.
- 8/10-bit A/D converter × 8 channels
 - 8-bit or 10-bit resolution can be selected.
- LCD controller (LCDC)
 - 32 SEG × 4 COM (Max 128 pixels)
 - With blinking function
- Low-power consumption (standby) mode
 - Stop mode
 - Sleep mode
 - Watch mode
 - Time-base timer mode
- I/O port
 - The number of maximum ports : Max 53
 - Port configuration
 - General-purpose I/O ports (N-ch open drain) : 2 ports
 - General-purpose I/O ports (CMOS) : 51 ports
- Programmable input voltage levels of port
 - Automotive input level / CMOS input level / hysteresis input level
- Flash memory security function
 - Protects the content of Flash memory

* : Purchase of Fujitsu I²C components conveys a license under the Philips I²C Patent Rights to use, these components in an I²C system provided that the system conforms to the I²C Standard Specification as defined by Philips.

MB95160M Series

■ PRODUCT LINEUP

Part number*1		MB95F168M	MB95F168N	MB95F168J
Parameter				
Type		Flash memory product		
ROM capacity		60 Kbytes		
RAM capacity		2 Kbytes		
Reset output		Yes		No
Option*2	Clock system	Dual clock		
	Low voltage detection reset	No	Yes	
	Clock supervisor	No		Yes
CPU functions		Number of basic instructions : 136 Instruction bit length : 8 bits Instruction length : 1 to 3 bytes Data bit length : 1, 8, and 16 bits Minimum instruction execution time : 61.5 ns (at machine clock frequency 16.25 MHz) Interrupt processing time : 0.6 μ s (at machine clock frequency 16.25 MHz)		
Peripheral functions	Ports (Max 53 ports)	General-purpose I/O port (N-ch open drain) : 2 ports General-purpose I/O port (CMOS) : 51 ports Programmable input voltage levels of port : Automotive input level / CMOS input level / hysteresis input level		
	Time-base timer (1 channel)	Interrupt cycle : 0.5 ms, 2.1 ms, 8.2 ms, 32.8 ms (at main oscillation clock 4 MHz)		
	Watchdog timer	Reset generated cycle At main oscillation clock 10 MHz : Min 105 ms At sub oscillation clock 32.768 kHz (for dual clock product) : Min 250 ms		
	Wild register	Capable of replacing 3 bytes of ROM data		
	I ² C (1 channel)	Master/slave sending and receiving Bus error function and arbitration function Detecting transmitting direction function Start condition repeated generation and detection functions Built-in wake-up function		
	UART/SIO (1 channel)	Data transfer capable in UART/SIO Full duplex double buffer, variable data length (5/6/7/8-bit), built-in baud rate generator NRZ type transfer format, error detected function LSB-first or MSB-first can be selected. Clock synchronous (SIO) or clock asynchronous (UART) serial data transfer capable		
	LIN-UART (1 channel)	Dedicated reload timer allowing a wide range of communication speeds to be set. Full duplex double buffer. Capable of serial data transfer synchronous or asynchronous to clock signal. LIN functions available as the LIN master or LIN slave.		
	8/10-bit A/D converter (8 channels)	8-bit or 10-bit resolution can be selected.		

(Continued)

MB95160M Series

(Continued)

Part number*1		MB95F168M	MB95F168N	MB95F168J
Parameter				
Peripheral functions	LCD controller (LCDC)	COM output : 4 (Max) SEG output : 32 (Max) LCD drive power supply (bias) pin : 4 32 SEG × 4 COM : 128 pixels can be displayed. Duty LCD mode Operable in LCD standby mode With blinking function Built-in division resistance for LCD drive		
	8/16-bit compound timer (2 channels)	Each channel of the timer can be used as “8-bit timer × 2 channels” or “16-bit timer × 1 channel”. Built-in timer function, PWC function, PWM function, capture function, and square wave form output Count clock : 7 internal clocks and external clock can be selected.		
	16-bit PPG (1 channel)	PWM mode or one-shot mode can be selected. Counter operating clock : Eight selectable clock sources Support for external trigger start		
	8/16-bit PPG (2 channels)	Each channel of the PPG can be used as “8-bit PPG × 2 channels” or “16-bit PPG × 1 channel”. Counter operating clock : Eight selectable clock sources		
	Watch counter	Count clock : Four selectable clock sources (125 ms, 250 ms, 500 ms, or 1 s) Counter value can be set from 0 to 63. (Capable of counting for 1 minute when selecting clock source 1 second and setting counter value to 60)		
	Watch prescaler (1 channel)	4 selectable interval times (125 ms, 250 ms, 500 ms, or 1 s)		
	External interrupt (8 channels)	Interrupt by edge detection (rising, falling, or both edges can be selected.) Can be used to recover from standby modes.		
Flash memory		Supports automatic programming, Embedded Algorithm Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Number of write/erase cycles (Minimum) : 10000 times Data retention time: 20 years Erase can be performed on each block Block protection with external programming voltage Flash Security Feature for protecting the content of the Flash		
Standby mode		Sleep, stop, watch, and time-base timer		

*1 : MASK ROM products are currently under consideration.

*2 : For details of option, refer to “■ MASK OPTION”.

Note : Part number of evaluation product in MB95160M series is MB95FV100D-103. When using it, the MCU board (MB2146-303A) is required.

MB95160M Series

■ OSCILLATION STABILIZATION WAIT TIME

The initial value of the main clock oscillation stabilization wait time is fixed to the maximum value. The maximum value is shown as follows.

Oscillation stabilization wait time	Remarks
$(2^{14}-2) / F_{CH}$	Approx. 4.10 ms (at main oscillation clock 4 MHz)

■ PACKAGES AND CORRESPONDING PRODUCTS

■ DIFFERENCES AMONG PRODUCTS AND NOTES ON SELECTING PRODUCTS

• Notes on Using Evaluation Products

The evaluation product has not only the functions of the MB95160M series but also those of other products to support software development for multiple series and models of the F²MC-8FX family. The I/O addresses for peripheral resources not used by the MB95160M series are therefore access-barred. Read/write access to these access-barred addresses may cause peripheral resources supposed to be unused to operate, resulting in unexpected malfunctions of hardware or software.

Particularly, do not use word access to odd numbered byte address in the prohibited areas (If these access are used, the address may be read or written unexpectedly).

Also, as the read values of prohibited addresses on the evaluation product are different to the values on the Flash memory products, do not use these values in the program.

The functions corresponding to certain bits in single-byte registers may not be supported on some Flash memory products. However, reading or writing to these bits will not cause malfunction of the hardware. Also, as the evaluation and Flash memory products are designed to have identical software operation, no particular precautions are required.

• Difference of Memory Spaces

If the amount of memory on the evaluation product is different from that of the Flash memory products, carefully check the difference in the amount of memory from the model to be actually used when developing software.

For details of memory space, refer to “■ CPU CORE”.

• Current Consumption

For details of current consumption, refer to “■ ELECTRICAL CHARACTERISTICS”.

• Package

For details of information on each package, refer to “■ PACKAGES AND CORRESPONDING PRODUCTS” and “■ PACKAGE DIMENSIONS”.

• Operating voltage

The operating voltage is different among the evaluation and Flash memory products.

For details of operating voltage, refer to “■ ELECTRICAL CHARACTERISTICS”

PIN ASSIGNMENT

MB95160M Series

■ PIN DESCRIPTION

Pin no.	Pin name	I/O circuit type*	Function
1	AV _{CC}	—	A/D converter power supply pin
2	AVR	—	A/D converter reference input pin
3	P14/PPG0	H	General-purpose I/O port. The pin is shared with 16-bit PPG ch.0 output.
4	P13/TRG0/ ADTG		General-purpose I/O port. The pin is shared with 16-bit PPG ch.0 trigger input (TRG0) and A/D converter trigger input (ADTG) .
5	P12/UCK0		General-purpose I/O port. The pin is shared with UART/SIO ch.0 clock I/O.
6	P11/UO0		General-purpose I/O port. The pin is shared with UART/SIO ch.0 data output.
7	P10/UI0	G	General-purpose I/O port. The pin is shared with UART/SIO ch.0 data input.
8	P24/EC0/ SDA0	I	General-purpose I/O port. The pin is shared with 8/16-bit compound timer ch.0 clock input (EC0) and I ² C ch.0 data I/O (SDA0) .
9	P23/TO01/ SCL0		General-purpose I/O port. The pin is shared with 8/16-bit compound timer ch.0 output (TO01) and I ² C ch.0 clock I/O (SCL0) .
10	P22/TO00	H	General-purpose I/O port. The pin is shared with 8/16-bit compound timer ch.0 output.
11	P21/PPG01		General-purpose I/O port. The pin is shared with 8/16-bit PPG ch.0 output.
12	P20/PPG00		General-purpose I/O port. The pin is shared with 8/16-bit PPG ch.0 output.
13	MOD	B	Operating mode designation pin
14	X0	A	Main clock oscillation pin
15	X1		
16	V _{SS}	—	Power supply pin (GND)
17	V _{CC}	—	Power supply pin
18	C	—	Capacitor connection pin
19	X1A	A	Sub clock oscillation pins (32 kHz)
20	X0A		
21	R _{ST}	B'	Reset pin
22	P90/V3	R	General-purpose I/O port. The pins are shared with power supply pin for LCDC drive.
23	P91/V2		
24	P92/V1		
25	P93/V0

MB95160M Series

Pin no.	Pin name	I/O circuit type*	Function
26	P94	S	General-purpose I/O port.
27	P95		
28	PA0/COM0	M	General-purpose I/O port. The pins are shared with LCD C COM output (COM0 to COM3).
29	PA1/COM1		
30	PA2/COM2		
31	PA3/COM3		
32	PB0/SEG00	M	General-purpose I/O port. The pins are shared with LCD C SEG output (SEG00 to SEG07).
33	PB1/SEG01		
34	PB2/SEG02		
35	PB3/SEG03		
36	PB4/SEG04		
37	PB5/SEG05		
38	PB6/SEG06		
39	PB7/SEG07		
40	PC0/SEG08	M	General-purpose I/O port. The pins are shared with LCD C SEG output (SEG08 to SEG15).
41	PC1/SEG09		
42	PC2/SEG10		
43	PC3/SEG11		
44	PC4/SEG12		
45	PC5/SEG13		
46	PC6/SEG14		
47	PC7/SEG15		
48	P60/SEG16/ PPG10	M	General-purpose I/O port. The pins are shared with LCD C SEG output (SEG16, SEG17) and 8/16-bit PPG ch.1 output (PPG10, PPG11) .
49	P61/SEG17/ PPG11		
50	P62/SEG18/ TO10		General-purpose I/O port. The pin is shared with LCD C SEG output (SEG18) and 8/16-bit compound timer ch.1 output (TO10) .

■ HANDLING DEVICES

- Preventing Latch-up

Care must be taken to ensure that maximum voltage ratings are not exceeded when they are used.

Latch-up may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- and high-withstand voltage pins or if higher than the rating voltage is applied between V_{CC} pin and V_{SS} pin.

When latch-up occurs, power supply current increases rapidly and might thermally damage elements.

- Stable Supply Voltage

Supply voltage should be stabilized.

A sudden change in power-supply voltage may cause a malfunction even within the guaranteed operating range of the V_{CC} power-supply voltage.

For stabilization, in principle, keep the variation in V_{CC} ripple (p-p value) in a commercial frequency range (50/60 Hz) not to exceed 10% of the standard V_{CC} value and suppress the voltage variation so that the transient variation rate does not exceed 0.1 V/ms during a momentary change such as when the power supply is switched.

- Precautions for Use of External Clock

Even when an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from sub clock mode or stop mode.

PIN CONNECTION

- Treatment of Unused Pin

Leaving unused input pins unconnected can cause abnormal operation or latch-up, leaving to permanent damage. Unused input pins should always be pulled up or down through resistance of at least 2 k Ω . Any unused input/output pins may be set to output mode and left open, or set to input mode and treated the same as unused input pins. If there is unused output pin, make it to open.

- Power Supply Pins

In products with multiple V_{CC} or V_{SS} pins, the pins of the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, you must connect the pins to external power supply and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating.

Moreover, connect the current supply source with the V_{CC} and V_{SS} pins of this device at the low impedance.

It is also advisable to connect a ceramic bypass capacitor of approximately 0.1 μ F between V_{CC} and V_{SS} pins near this device.

- Mode Pin (MOD)

Connect the MOD pin directly to V_{CC} or V_{SS} .

To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the MOD pin to V_{CC} or V_{SS} and to provide a low-impedance connection.

Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitance value higher than C_s . For connection of smoothing capacitor C_s , refer to the diagram below.

- C pin connection diagram

- Analog Power Supply

Always set the same potential to AV_{CC} and V_{CC} pins. When $V_{CC} > AV_{CC}$, the current may flow through the AN00 to AN07 pins.

- Treatment of Power Supply Pins on A/D Converter

Connect to be $AV_{CC} = V_{CC}$ and $AV_{SS} = AVR = V_{SS}$ even if the A/D converter is not in use.

Noise riding on the AV_{CC} pin may cause accuracy degradation. So, connect approx. 0.1 μF ceramic capacitor as a bypass capacitor between AV_{CC} and AV_{SS} pins in the vicinity of this device.

MB95160M Series

■ PROGRAMMING FLASH MEMORY MICROCONTROLLERS USING PARALLEL PROGRAMMER

• Supported Parallel Programmers and Adapters

The following table lists supported parallel programmers and adapters.

Package	Applicable adapter model	Parallel programmers
FPT-64P-M23	TEF110-95F168HPMC	AF9708 (Ver 02.35G or more)
FPT-64P-M24	TEF110-95F168HPMC1	AF9709/B (Ver 02.35G or more) AF9723+AF9834 (Ver 02.08E or more)

Note : For information on applicable adapter models and parallel programmers, contact the following:
Flash Support Group, Inc. TEL: +81-53-428-8380

• Sector Configuration

The individual sectors of Flash memory correspond to addresses used for CPU access and programming by the parallel programmer as follows:

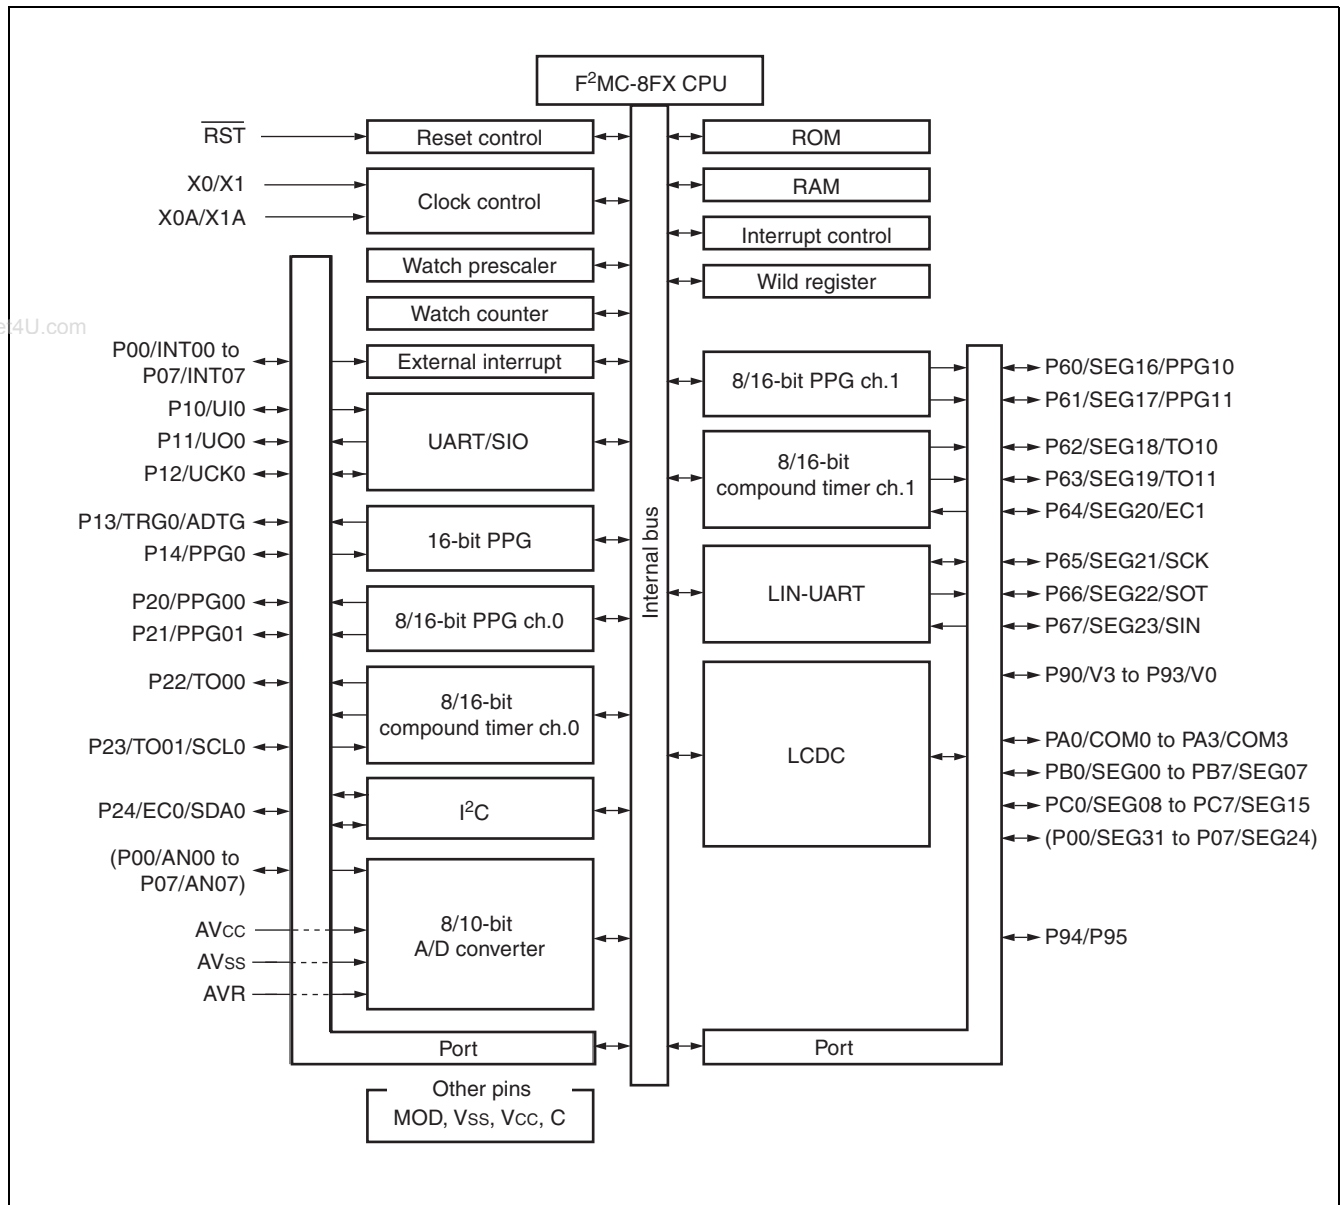

Flash memory	CPU address	Programmer address*
60 Kbytes	1000 _H	11000 _H
	FFFF _H	1FFFF _H

*: Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

• Programming Method

- 1) Set the type code of the parallel programmer to 17222.
- 2) Load program data to programmer addresses 11000_H to 1FFFF_H.
- 3) Programmed by parallel programmer

■ BLOCK DIAGRAM

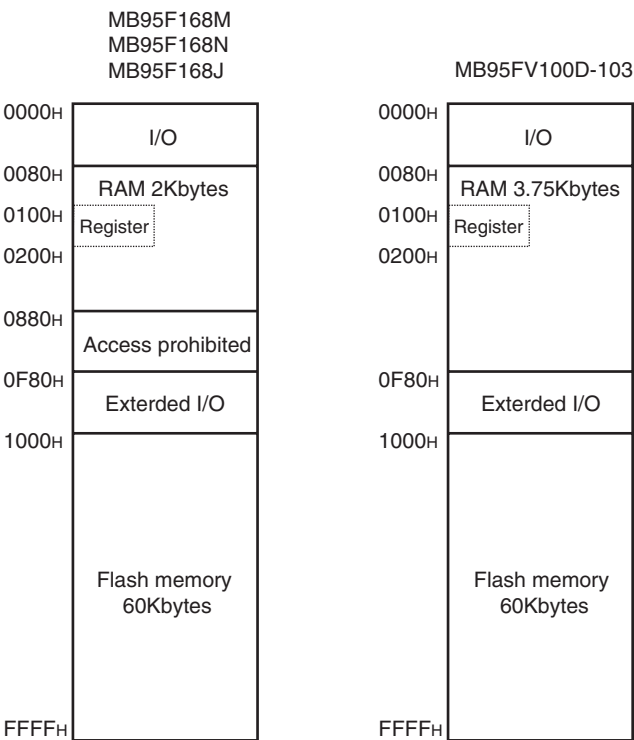

MB95160M Series

CPU CORE

1. Memory space

Memory space of the MB95160M series is 64 Kbytes and consists of I/O area, data area, and program area. The memory space includes special-purpose areas such as the general-purpose registers and vector table. Memory map of the MB95160M series is shown below.

• Memory Map

2. Register

The MB95160M series has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The dedicated registers are as follows:

- Program counter (PC) : A 16-bit register to indicate locations where instructions are stored.
- Accumulator (A) : A 16-bit register for temporary storage of arithmetic operations. In the case of an 8-bit data processing instruction, the lower 1 byte is used.
- Temporary accumulator (T) : A 16-bit register which performs arithmetic operations with the accumulator. In the case of an 8-bit data processing instruction, the lower 1 byte is used.
- Index register (IX) : A 16-bit register for index modification.
- Extra pointer (EP) : A 16-bit pointer to point to a memory address.
- Stack pointer (SP) : A 16-bit register to indicate a stack area.
- Program status (PS) : A 16-bit register for storing a register bank pointer, a direct bank pointer, and a condition code register.

			Initial Value
<div>← 16-bit →</div>			
<div>PC</div>		: Program counter	FFFD _H
<div>AHAL</div>		: Accumulator	0000 _H
<div>THTL</div>		: Temporary accumulator	0000 _H
<div>IX</div>		: Index register	0000 _H
<div>EP</div>		: Extra pointer	0000 _H
<div>SP</div>		: Stack pointer	0000 _H
<div>PS</div>		: Program status	0030 _H

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and a direct bank pointer (DP) and the lower 8 bits for use as a condition code register (CCR). (Refer to the diagram below.)

• Structure of the Program Status

MB95160M Series

The RP indicates the address of the register bank currently being used. The relationship between the content of RP and the real address conforms to the conversion rule illustrated below:

- Rule for Conversion of Actual Addresses in the General-purpose Register Area

The DP specifies the area for mapping instructions (16 different instructions such as MOV A, dir) using direct addresses to 0080_H to 00FF_H.

Direct bank pointer (DP2 to DP0)	Specified address area	Mapping area
XXX _B (no effect to mapping)	0000 _H to 007F _H	0000 _H to 007F _H (without mapping)
000 _B (initial value)	0080 _H to 00FF _H	0080 _H to 00FF _H (without mapping)
001 _B		0100 _H to 017F _H
010 _B		0180 _H to 01FF _H
011 _B		0200 _H to 027F _H
100 _B		0280 _H to 02FF _H
101 _B		0300 _H to 037F _H
110 _B		0380 _H to 03FF _H
111 _B		0400 _H to 047F _H

The CCR consists of the bits indicating arithmetic operation results or transfer data contents and the bits that control CPU operations at interrupt.

- H flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. This flag is for decimal adjustment instructions.
- I flag : Interrupt is enabled when this flag is set to "1". Interrupt is disabled when this flag is set to "0". The flag is set to "0" when reset.
- IL1, IL0 : Indicates the level of the interrupt currently enabled. Processes an interrupt only if its request level is higher than the value indicated by these bits.

IL1	IL0	Interrupt level	Priority
0	0	0	<div style="text-align: center;"> High ↑ ↓ Low (no interruption) </div>
0	1	1	
1	0	2	
1	1	3	

- N flag : Set to "1" if the MSB is set to "1" as the result of an arithmetic operation. Cleared to "0" when the bit is set to "0".
- Z flag : Set to "1" when an arithmetic operation results in "0". Cleared to "0" otherwise.
- V flag : Set to "1" if the complement on 2 overflows as a result of an arithmetic operation. Cleared to "0" otherwise.
- C flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

The following general-purpose registers are provided:

General-purpose registers: 8-bit data storage registers

The general-purpose registers are 8 bits and located in the register banks on the memory. 1-bank contains 8-register. Up to a total of 32 banks can be used on the MB95160M series. The bank currently in use is specified by the register bank pointer (RP), and the lower 3 bits of OP code indicates the general-purpose register 0 (R0) to general-purpose register 7 (R7).

- Register Bank Configuration

MB95160M Series

■ I/O MAP

Address	Register abbreviation	Register name	R/W	Initial value
0000 _H	PDR0	Port 0 data register	R/W	00000000 _B
0001 _H	DDR0	Port 0 direction register	R/W	00000000 _B

- R/W access symbols

R/W : Readable/Writable

R : Read only

W : Write only

- Initial value symbols

0 : The initial value of this bit is "0".

1 : The initial value of this bit is "1".

X : The initial value of this bit is undefined.

Note : Do not write to the " (Disabled) ". Reading the " (Disabled) " returns an undefined value.

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

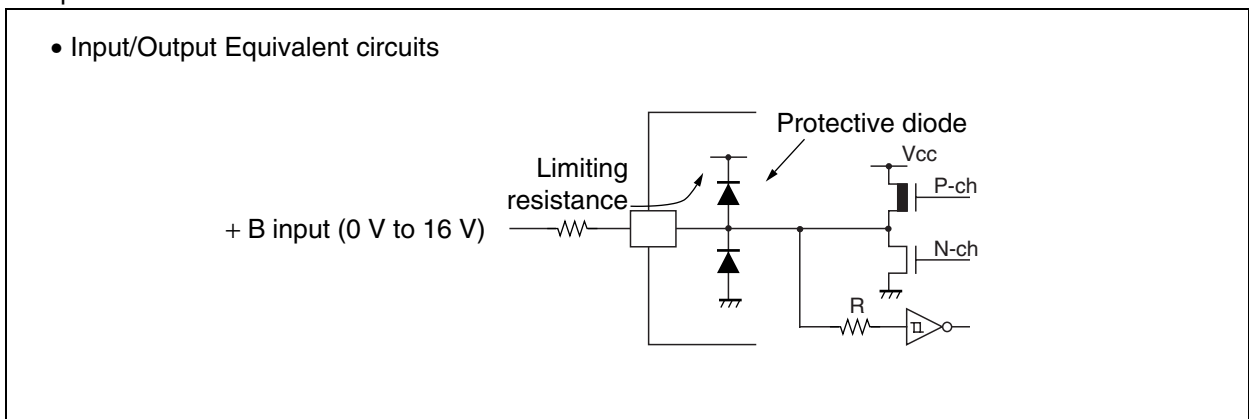

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V _{CC} , AV _{CC}	V _{SS} – 0.3	V _{SS} + 6.0	V	*2
	AVR	V _{SS} – 0.3	V _{SS} + 6.0		*2
Power supply voltage for LCD	V0 to V3	V _{SS} – 0.3	V _{SS} + 6.0	V	*3
Input voltage*1	V _I	V _{SS} – 0.3	V _{SS} + 6.0	V	*4
Output voltage*1	V _O	V _{SS} – 0.3	V _{SS} + 6.0	V	*4
Maximum clamp current	I _{CLAMP}	– 2.0	+ 2.0	mA	Applicable to pins*5
Total maximum clamp current	Σ I _{CLAMP}	—	20	mA	Applicable to pins*5
“L” level maximum output current	I _{OL}	—	15	mA	Applicable to pins*5
“L” level average current	I _{OLAV}	—	4	mA	Applicable to pins*5 Average output current = operating current × operating ratio (1 pin)
“L” level total maximum output current	ΣI _{OL}	—	100	mA	
“L” level total average output current	ΣI _{OLAV}	—	50	mA	Total average output current = operating current × operating ratio (Total of pins)
“H” level maximum output current	I _{OH}	—	– 15	mA	Applicable to pins*5
“H” level average current	I _{OHAV}	—	– 4	mA	Applicable to pins*5 Average output current = operating current × operating ratio (1 pin)
“H” level total maximum output current	ΣI _{OH}	—	– 100	mA	
“H” level total average output current	ΣI _{OHAV}	—	– 50	mA	Total average output current = operating current × operating ratio (Total of pins)
Power consumption	P _d	—	320	mW	
Operating temperature	T _A	– 10	+ 85	°C	
Storage temperature	T _{stg}	– 55	+ 150	°C	

(Continued)

MB95160M Series

(Continued)

- *1 : The parameter is based on $V_{SS} = 0.0 \text{ V}$.
- *2 : Apply equal potential to AV_{CC} and V_{CC} . AVR should not exceed $AV_{CC} + 0.3 \text{ V}$.
- *3 : V_0 to V_3 should not exceed $V_{CC} + 0.3 \text{ V}$.
- *4 : V_I and V_O should not exceed $V_{CC} + 0.3 \text{ V}$. V_I must not exceed the rating voltage. However, if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_I rating.
- *5 : Applicable to pins :
 - P00 to P07, P10 to P14, P20 to P22, P60 to P67, P90 to P95, PA0 to PA3, PB0 to PB7, PC0 to PC7
 - Use within recommended operating conditions.
 - Use at DC voltage (current).
 - + B signal is an input signal that exceeds V_{CC} voltage. The + B signal should always be applied a limiting resistance placed between the + B signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the + B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
 - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this affects other devices.
 - Note that if the + B signal is inputted when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
 - Note that if the + B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
 - Care must be taken not to leave the + B input pin open.
 - Note that analog system input/output pins other than the A/D input pins (LCD drive pins, etc.) cannot accept + B signal input.
 - Sample recommended circuits :

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

(V_{SS} = 0.0 V)

Parameter	Symbol	Condi- tions	Value		Unit	Remarks	
			Min	Max			
Power supply voltage	V _{CC} , AV _{CC}	—	2.42*1,*2	5.5*1	V	In normal operating	Other than MB95FV100D- 103
			2.3	5.5		Hold condition in STOP mode	
			2.7	5.5		In normal operating	MB95FV100D- 103
			2.3	5.5		Hold condition in STOP mode	
Power supply voltage for LCD	V ₀ to V ₃		V _{SS}	V _{CC}	V	The range of liquid crystal power supply: without up-conversion (The optimal value depends on liquid crystal display elements used.)	
A/D converter reference input voltage	AVR		4.0	AV _{CC}	V		
Smoothing capacitor	C _S		0.1	1.0	μF	*3	
Operating temperature	T _A		− 10	+ 85	°C	Other than MB95FV100D-103	
		+ 5	+35	°C	MB95FV100D-103		

*1 : The values vary with the operating frequency, machine clock or analog guarantee range.

*2 : The value is 2.88 V when the low voltage detection reset is used. The device operates normally during the time between 2.88 V and low voltage detection, and between release voltage and 2.88 V.

(Continued)

MB95160M Series

(Continued)

*3 : Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitor value higher than C_s . For connection of smoothing capacitor C_s , refer to the diagram below.

- C pin connection diagram

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

MB95160M Series

3. DC Characteristics

($V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

*1 : Clock before setting division due to machine clock division ratio selection bit (SYCC : DIV1 and DIV0) . This source clock is divided by the machine clock division ratio selection bit (SYCC : DIV1 and DIV0) , and it becomes the machine clock. Further, the source clock can be selected as follows.

- Main clock divided by 2
- PLL multiplication of main clock (select from 1, 2, 2.5, 4 multiplication)
- Sub clock divided by 2
- PLL multiplication of sub clock (select from 2, 3, 4 multiplication)

*2 : Operation clock of the microcontroller. Machine clock can be selected as follows.

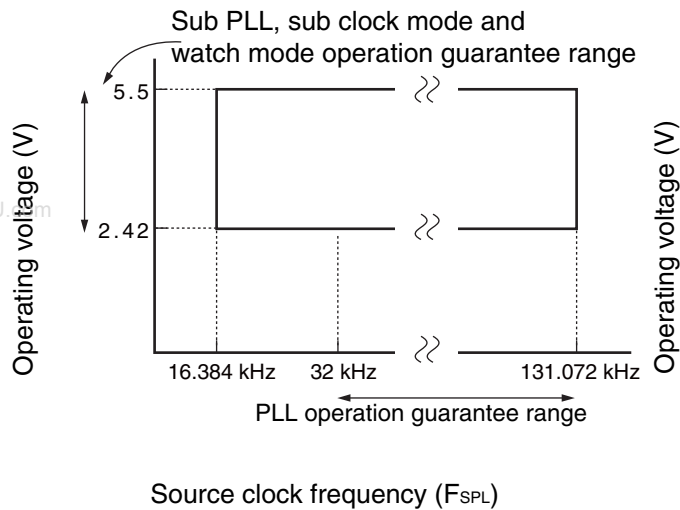

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

- Outline of clock generation block

*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : • Refer to “(2) Source Clock/Machine Clock” for t_{MCLK} .

- m is CS4 bit and CS3 bit (bit 4 and bit 3) of I²C clock control register (ICCR) .
- n is CS2 bit to CS0 bit (bit 2 to bit 0) of I²C clock control register (ICCR) .
- Actual timing of I²C is determined by m and n values set by the machine clock (t_{MCLK}) and CS4 to CS0 of ICCR0 register.

• Standard-mode :

m and n can be set at the range : $0.9 \text{ MHz} < t_{MCLK} \text{ (machine clock)} < 10 \text{ MHz}$.

Setting of m and n determines the machine clock that can be used below.

(m, n) = (1, 8) : $0.9 \text{ MHz} < t_{MCLK} \leq 1 \text{ MHz}$

(m, n) = (1, 22), (5, 4), (6, 4), (7, 4), (8, 4) : $0.9 \text{ MHz} < t_{MCLK} \leq 2 \text{ MHz}$

(m, n) = (1, 38), (5, 8), (6, 8), (7, 8), (8, 8) : $0.9 \text{ MHz} < t_{MCLK} \leq 4 \text{ MHz}$

(m, n) = (1, 98) : $0.9 \text{ MHz} < t_{MCLK} \leq 10 \text{ MHz}$

• Fast-mode :

m and n can be set at the range : $3.3 \text{ MHz} < t_{MCLK} \text{ (machine clock)} < 10 \text{ MHz}$.

Setting of m and n determines the machine clock that can be used below.

(m, n) = (1, 8) : $3.3 \text{ MHz} < t_{MCLK} \leq 4 \text{ MHz}$

(m, n) = (1, 22), (5, 4) : $3.3 \text{ MHz} < t_{MCLK} \leq 8 \text{ MHz}$

(m, n) = (6, 4) : $3.3 \text{ MHz} < t_{MCLK} \leq 10 \text{ MHz}$

Differential linear error			− 1.9	—	+ 1.9	LSB	
Zero transition voltage	V _{OT}		AV _{SS} − 1.5 LSB	AV _{SS} + 0.5 LSB	AV _{SS} + 2.5 LSB	V	
Full-scale transition voltage	V _{FST}		AVR − 3.5 LSB	AVR − 1.5 LSB	AVR + 0.5 LSB	V	
Compare time	—		0.9	—	16500	μs	4.5 V ≤ AV _{CC} ≤ 5.5 V
			1.8	—	16500	μs	4.0 V ≤ AV _{CC} < 4.5 V
Sampling time	—		0.6	—	∞	μs	4.5 V ≤ AV _{CC} ≤ 5.5 V, At external impedance < 5.4 kΩ
			1.2	—	∞	μs	4.0 V ≤ AV _{CC} < 4.5 V, At external impedance < 2.4 kΩ
Analog input current	I _{AIN}		− 0.3	—	+ 0.3	μA	
Analog input voltage	V _{AIN}		AV _{SS}	—	AVR	V	
Reference voltage	—		AV _{SS} + 4.0	—	AV _{CC}	V	AVR pin
Reference voltage supply current	I _R		—	600	900	μA	AVR pin, during A/D operation
	I _{RH}		—	—	5	μA	AVR pin, at stop mode

(2) Notes on Using A/D Converter

• About the external impedance of analog input and its sampling time

A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. Also, if the sampling time cannot be sufficient, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

	R	C
$4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$	2.0 k Ω (Max)	16 pF (Max)
$4.0\text{ V} \leq V_{CC} < 4.5\text{ V}$	8.2 k Ω (Max)	16 pF (Max)

Note : The values are reference values.

• The relationship between external impedance and minimum sampling time

(External impedance = 0 k Ω to 100 k Ω)

(External impedance = 0 k Ω to 20 k Ω)

• About errors

As $|V_{CC} - V_{SS}|$ becomes smaller, values of relative errors grow larger.

(3) Definition of A/D Converter Terms

- Resolution

The level of analog variation that can be distinguished by the A/D converter.

When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.

- Linearity error (unit : LSB)

The deviation between the value along a straight line connecting the zero transition point

("00 0000 0000" \leftarrow "00 0000 0001") of a device and the full-scale transition point

("11 1111 1111" \leftarrow "11 1111 1110") compared with the actual conversion values obtained.

- Differential linear error (Unit : LSB)

Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.

- Total error (unit: LSB)

Difference between actual and theoretical values, caused by a zero transition error, full-scale transition error, linearity error, quantum error, and noise.

$$1 \text{ LSB} = \frac{V_{CC} - V_{SS}}{1024} \text{ (V)}$$

$$\text{Total error of digital output N} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

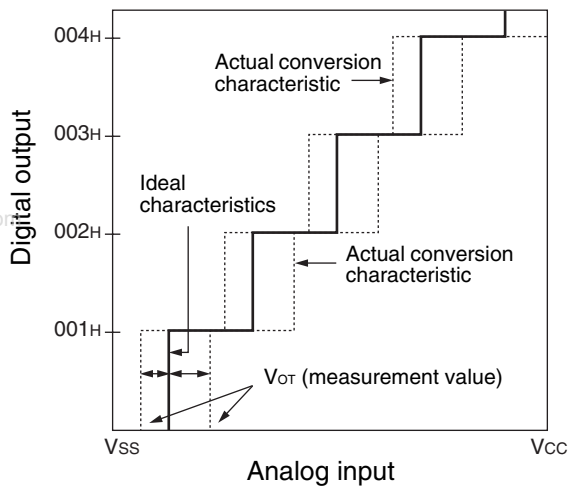

N : A/D converter digital output value

V_{NT} : A voltage at which digital output transits from (N - 1)_H to N_H

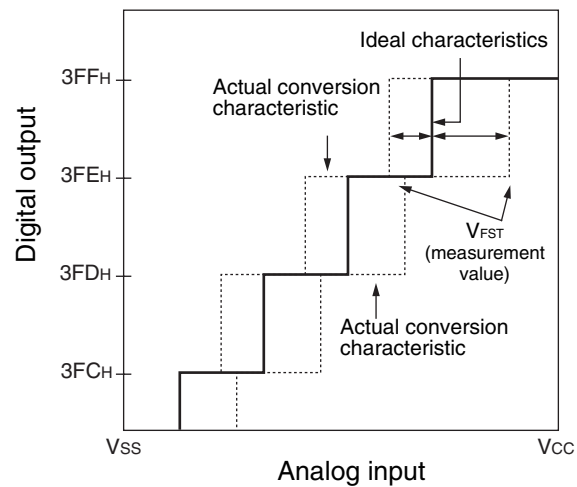

(Continued)

(Continued)

Zero transition error

Full-scale transition error

Linearity error

Differential linear error

$$\text{Linearity error in digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linear error in digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

N : A/D converter digital output value

V_{NT} : A voltage at which digital output transits from (N - 1)_H to N_H

V_{OT} (Ideal value) = V_{SS} + 0.5 LSB [V]

V_{FST} (Ideal value) = V_{CC} - 1.5 LSB [V]

6. Flash Memory Program/Erase Characteristics

Parameter	Condi- tions	Value			Unit	Remarks
		Min	Typ	Max		
Chip erase time	—	—	1* ¹	15* ²	s	Excludes 00 _H programming prior erasure.
Byte programming time		—	32	3600	μs	Excludes system-level overhead.
Erase/program cycle		10000	—	—	cycle	
Power supply voltage at erase/program		4.5	—	5.5	V	
Flash memory data retention time		20* ³	—	—	year	Average T _A = + 85 °C

*1 : T_A = + 25 °C, V_{CC} = 5.0 V, 10000 cycles

*2 : T_A = + 85 °C, V_{CC} = 4.5 V, 10000 cycles

*3 : This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at +85 °C) .

EXAMPLE CHARACTERISTICS

Power supply current temperature

$I_{CC} - V_{CC}$
 $T_A = +25^\circ\text{C}$, $F_{MP} = 2, 4, 8, 10, 16$ MHz (divided by 2)
 Main clock mode, at external clock operating

$I_{CC} - T_A$
 $V_{CC} = 5.5$ V, $F_{MP} = 10, 16$ MHz (divided by 2)
 Main clock mode, at external clock operating

$I_{CCS} - V_{CC}$
 $T_A = +25^\circ\text{C}$, $F_{MP} = 2, 4, 8, 10, 16$ MHz (divided by 2)
 Main sleep mode, at external clock operating

$I_{CCS} - T_A$
 $V_{CC} = 5.5$ V, $F_{MP} = 10, 16$ MHz (divided by 2)
 Main sleep mode, at external clock operating

$I_{CCMPLL} - V_{CC}$
 $T_A = +25^\circ\text{C}$, $F_{MP} = 2, 4, 8, 10, 16$ MHz
 (Main PLL multiplied by 2.5)
 Main PLL mode, at external clock operating

$I_{CCMPLL} - T_A$
 $V_{CC} = 5.5$ V, $F_{MP} = 10, 16$ MHz (Main PLL multiplied by 2.5)
 Main PLL mode, at external clock operating

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice.
Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
