

32 M-WORD BY 64-BIT DDR SYNCHRONOUS DYNAMIC RAM MODULE

UNBUFFERED TYPE

Description

The MC-45D32CD641 is a 33,554,432 words by 64 bits DDR synchronous dynamic RAM module on which 16 pieces of 128M DDR SDRAM: μ PD45D128842 are assembled.

These modules provide high density and large quantities of memory in a small space without utilizing the surface-mounting technology on the printed circuit board.

Decoupling capacitors are mounted on power supply line for noise reduction.

Features

- 33,554,432 words by 64 bits organization
- Clock frequency

Part number	/CAS latency	Clock frequency (MAX.)	Module type
MC-45D32CD641KFA-C75	CL = 2.5	133 MHz	DDR SDRAM
	CL = 2	100 MHz	Unbuffered DIMM
MC-45D32CD641KFA-C80	CL = 2.5	125 MHz	Design specification
	CL = 2	100 MHz	Rev.0.9 compliant

- Fully Synchronous Dynamic RAM with all signals except DM, DQS and DQ referenced to a positive clock edge
- Double Data Rate interface
 - Differential CLK (/CLK) input
 - Data inputs and DM are synchronized with both edges of DQS
 - Data outputs and DQS are synchronized with a cross point of CLK and /CLK
- Quad internal banks operation
- Possible to assert random column address in every clock cycle
- Programmable Mode register set
 - /CAS latency (2, 2.5)
 - Burst length (2, 4, 8)
 - Wrap sequence (Sequential / Interleave)
- Automatic precharge and controlled precharge
- CBR (Auto) refresh and self refresh
- 2.5 V $\pm$ 0.2 V Power supply for V_{DD}
- 2.5 V $\pm$ 0.2 V Power supply for V_{DDQ}
- SSTL_2 compatible with all signals
- 4,096 refresh cycles / 64 ms
- Burst termination by Precharge command and Burst stop command
- 184-pin dual in-line memory module (Pin pitch = 1.27 mm)
- Unbuffered type
- Serial PD

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

Ordering Information

Part number	Clock frequency (MAX.)	Package	Mounted devices
MC-45D32CD641KFA-C75	133 MHz	184-pin Dual In-line Memory Module (Socket Type)	16 pieces of μ PD45D128842G5 (Rev. K) (10.16 mm (400) TSOP (II))
MC-45D32CD641KFA-C80	125 MHz	Edge connector: Gold plated 31.75 mm height	

Pin Configuration

184-pin Dual In-line Memory Module Socket Type (Edge connector: Gold plated)

/xxx indicates active low signal.

A0 - A11 : Address Inputs

[Row: A0 - A11, Column: A0 - A9]

BA0, BA1 : SDRAM Bank Select

DQ0 - DQ63 : Data Inputs/Outputs

CK0 - CK2 : Clock Input

(positive line of differential pair)

/CK0 - /CK2 : Clock Input

(negative line of differential pair)

CKE0 : Clock Enable Input

/S0, /S1 : Chip Select Input

/RAS : Row Address Strobe

/CAS : Column Address Strobe

/WE : Write Enable

DQS0 - DQS7 : Low Data Strobe

DM(0 - 7) / DQS(9 - 16) : Low Data Masks /
High Data Strobe

SA0 - SA2 : Address Input for EEPROM

SDA : Serial Data I/O for PD

SCL : Clock Input for PD

VDD : Power Supply

VSS : Ground

VDDID : VDD Identification Flag

VDDQ : Power Supply for DQ and DQS

VREF : Input Reference

VDDSPD : Power supply for EEPROM

NC : No Connection

/RESET : Reset Input

Block Diagram

- Remarks 1.** The value of all resistors of DQs, DQSSs, DM/DQSSs is 22 Ω.
- 2.** D0 – D15: μ PD45D128842 (4M words $\times$ 8 bits $\times$ 4 banks)

Electrical Specifications

- All voltages are referenced to V_{SS} (GND).
- After power up, wait more than 1 ms and then, execute **Power on sequence and CBR (auto) refresh** before proper device operation is achieved.

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Voltage on power supply pin relative to V_{SS}	V_{DD}, V_{DDQ}		-0.5 to +3.6	V
Voltage on input pin relative to V_{SS}	V_I		-0.5 to +3.6	V
Short circuit output current	I_O		50	mA
Power dissipation	P_D		12	W
Storage temperature	T_{stg}		-55 to +125	°C

Caution Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Recommended Operating Conditions

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Supply voltage	V_{DD}		2.3	2.5	2.7	V
Supply voltage for DQ, DQS	V_{DDQ}		2.3	2.5	2.7	V
Input reference voltage	V_{REF}		$0.49 \times V_{DDQ}$		$0.51 \times V_{DDQ}$	V
Termination voltage	V_{TT}		$V_{REF} - 0.04$	V_{REF}	$V_{REF} + 0.04$	V
High level dc input voltage	V_{IH} (DC)		$V_{REF} + 0.15$		$V_{DD} + 0.3$	V
Low level dc input voltage	V_{IL} (DC)		-0.3		$V_{REF} - 0.15$	V
Input differential voltage (CLK and /CLK)	V_{ID} (DC)		0.36		$V_{DDQ} + 0.6$	V
Input crossing point voltage (CLK and /CLK)	V_{IX}		$0.5 \times V_{DDQ} - 0.2$		$0.5 \times V_{DDQ} + 0.2$	V
Operating ambient temperature	T_A		0		70	°C

Capacitance ($T_A = 25^\circ\text{C}$, $f = 100\text{ MHz}$)

Parameter	Symbol	Test condition	MIN.	TYP.	MAX.	Unit
Input capacitance	C_{I1}	A0 - A11, BA0, BA1, /RAS, /CAS, /WE	TBD		TBD	pF
	C_{I2}	CK0 - CK2, /CK0 - /CK2	TBD		TBD	
	C_{I3}	CKE0	TBD		TBD	
	C_{I4}	/S0, /S1	TBD		TBD	
Data input/output capacitance	$C_{I/O1}$	DM(0-7)/DQS(9-16), DQS0 - DQS7	TBD		TBD	pF
	$C_{I/O2}$	DQ0 - DQ63	TBD		TBD	

DC Characteristics 1 (Recommended Operating Conditions unless otherwise noted)

Parameter	Symbol	Test condition	/CAS latency	Grade	MIN.	MAX.	Unit	Notes
Operating current (ACT-PRE)	I _{DD0}	t _{RC} = t _{RC(MIN.)} , t _{CK} = t _{CK(MIN.)} , One bank, Active-precharge, DQ, DM and DQS inputs changing twice per clock cycle, Address and control inputs changing once per clock cycle		-C75		TBD	mA	
				-C80		TBD		
Operating current (ACT-READ-PRE)	I _{DD1}	t _{RC} = t _{RC(MIN.)} , t _{CK} = t _{CK(MIN.)} , One bank, Active-read-precharge, I _O = 0 mA, Burst length = 2, Address and control inputs changing once per clock cycle	CL = 2	-C75		TBD	mA	1
				-C80		TBD		
			CL = 2.5	-C75		TBD		
				-C80		TBD		
Precharge power down standby current	I _{DD2P}	CKE ≤ V _{IL(MAX.)} , t _{CK} = t _{CK(MIN.)} , All banks idle, Power down mode				TBD	mA	
Idle standby current	I _{DD2N}	CKE ≥ V _{IH(MIN.)} , t _{CK} = t _{CK(MIN.)} , /CS ≥ V _{IH(MIN.)} , All banks idle, Address and other control inputs changing once per clock cycle				TBD	mA	
Active power down standby current	I _{DD3P}	CKE ≤ V _{IL(MAX.)} , t _{CK} = t _{CK(MIN.)} , One bank active, Power down mode				TBD	mA	
Active standby current	I _{DD3N}	/CS ≥ V _{IH(MIN.)} , CKE ≥ V _{IH(MIN.)} , t _{CK} = t _{CK(MIN.)} , t _{RC} = t _{RAS(MAX.)} , One bank, Active-precharge, DQ, DM and DQS inputs changing twice per clock cycle, Address and other control inputs changing once per clock cycle				TBD	mA	
Operating current (Burst read)	I _{DD4R}	t _{CK} = t _{CK(MIN.)} , Continuous burst read, Burst length = 2, I _O = 0mA, One bank active, Address and control inputs changing once per clock cycle	CL = 2	-C75		TBD	mA	2
				-C80		TBD		
			CL = 2.5	-C75		TBD		
				-C80		TBD		
Operating current (Burst write)	I _{DD4W}	t _{CK} = t _{CK(MIN.)} , Continuous burst write, Burst length = 2, One bank active, Address and control inputs changing once per clock cycle	CL = 2	-C75		TBD	mA	2
				-C80		TBD		
			CL = 2.5	-C75		TBD		
				-C80		TBD		
CBR (auto) refresh current	I _{DD5}	t _{RFC} = t _{RFC(MIN.)}		-C75		TBD	mA	
				-C80		TBD		
Self refresh current	I _{DD6}	CKE ≤ 0.2 V				TBD	mA	

Notes 1. I_{DD1} depends on output loading and cycle rates. Specified values are obtained with the output open.

2. I_{DD4R} and I_{DD4W} depend on output loading and cycle rates. Specified values are obtained with the output open.

DC Characteristics 2 (Recommended Operating Conditions unless otherwise noted)

Parameter	Symbol	Test condition	MIN.	MAX.	Unit	Notes
Input leakage current	I _{I(L)}	V _I = 0 to 3.6 V, all other pins not under test = 0 V	TBD	TBD	μA	
Output leakage current	I _{O(L)}	D _{OUT} is disabled, V _O = 0 to V _{DDQ} + 0.3 V	TBD	TBD	μA	
Output high current	I _{OH}	V _{OUT} = V _{DDQ} - 0.43 V	TBD		mA	
Output low current	I _{OL}	V _{OUT} = 0.35 V	TBD		mA	

AC Characteristics (Recommended Operating Conditions unless otherwise noted)

Test Conditions

Parameter	Symbol	Value	Unit	Notes
Input Reference voltage (Input timing measurement reference level)	V_{REF}	$V_{DDQ} \times 0.5$	V	
Termination voltage (Output timing measurement reference level)	V_{TT}	V_{REF}	V	1
High level ac input voltage	$V_{IH}(ac)$	$V_{REF} + 0.31$	V	
Low level ac input voltage	$V_{IL}(ac)$	$V_{REF} - 0.31$	V	
Input differential voltage (CK0 - CK2 and /CK0 - /CK2)	$V_{ID}(ac)$	0.7	V	
Input signal slew rate	SLEW	1	V/ns	2

- Notes**
- Output waveform timing is measured where the output signal crosses through the V_{TT} level.
 - Slew rate is to be maintained in the $V_{IL}(ac)$ to $V_{IH}(ac)$ range of the input signal swing. $SLEW = (V_{IH}(ac) - V_{IL}(ac)) / \Delta t$

Synchronous Characteristics

Parameter		Symbol	-C75 (PC266B)		-C80 (PC200)		Unit	Note

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

CAUTION FOR HANDLING MEMORY MODULES

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory IC, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

When re-packing memory modules, be sure the modules are NOT touching each other. Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

- The information in this document is current as of June, 2000. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC semiconductor products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades:
 "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
 "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.
 The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.
 (Note)
 (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
 (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
