

AM1 8-bit SERIES

AM1 (MN101) Series

The AM1 Series of 8-bit microcomputers is the realization of developments in C programming.

Because of the 8-bit architecture, which allows half-byte instruction sets and offers other advantages, assembler ROM code size can be reduced.

They are compact and consume little power, but feature a shortest instruction processing time of 63 ns (5 V).

They can be used in a wide variety of applications where cost performance is a demand.

Features

- **Efficiency of C-based ROM code:** Assembler rate 1 or less
- **High-speed instruction processing:** 63 ns (32 MHz)
- **Linear address space:** 1 MB
- **Identical architecture for 32- and 16-bit microcomputers**
- **Option functions**
 - Hardware task switching (Max. 4 task)
 - 16-bit multiplication
 - ROM collection
