

## N-Channel Enhancement Mode Power MOSFET

# MTB2D0N04E3

### Features

- Low On Resistance
- Simple Drive Requirement
- Low Gate Charge
- Fast Switching Characteristic
- RoHS compliant package

|                                                                  |                     |
|------------------------------------------------------------------|---------------------|
| <b>BV<sub>DSS</sub></b>                                          | <b>40V</b>          |
| <b>I<sub>D</sub>@V<sub>GS</sub>=10V, T<sub>C</sub>=25°C</b>      | <b>84A</b>          |
| <b>I<sub>D</sub>@V<sub>GS</sub>=10V, T<sub>A</sub>=25°C</b>      | <b>17.3A</b>        |
| <b>R<sub>DS(ON)</sub>@V<sub>GS</sub>=10V, I<sub>D</sub>=20A</b>  | <b>2.2 mΩ (typ)</b> |
| <b>R<sub>DS(ON)</sub>@V<sub>GS</sub>=4.5V, I<sub>D</sub>=20A</b> | <b>2.5 mΩ (typ)</b> |

\*Drain current limited by maximum junction temperature

**Thermal Data**

| Parameter                                             | Symbol          | Value | Unit                 |
|-------------------------------------------------------|-----------------|-------|----------------------|
| Thermal Resistance, Junction-to-case, max             | $R_{\theta JC}$ | 0.9   | $^{\circ}\text{C/W}$ |
| Thermal Resistance, Junction-to-ambient, max (Note 2) | $R_{\theta JA}$ | 60    |                      |

- Note : 1. The power dissipation  $P_D$  is based on  $T_{J(MAX)}=175^{\circ}\text{C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
2. The value of  $R_{\theta JA}$  is measured with the device mounted on 1 in<sup>2</sup> FR-4 board with 2 oz. copper, in a still air environment with  $T_A=25^{\circ}\text{C}$ . The power dissipation  $P_{DSM}$  is based on  $R_{\theta JA}$  and the maximum allowed junction temperature of  $150^{\circ}\text{C}$ . The value in any given application depends on the user's specific board design, and the maximum temperature of  $175^{\circ}\text{C}$  may be used if the PCB allows it.
3. Pulse width limited by junction temperature  $T_{J(MAX)}=175^{\circ}\text{C}$ .
4. Ratings are based on low frequency and low duty cycles to keep initial  $T_J=25^{\circ}\text{C}$ . 100% tested by conditions of  $V_{DD}=30\text{V}$ ,  $I_D=20\text{A}$ ,  $L=1\text{mH}$ ,  $V_{GS}=10\text{V}$ .
5. Calculated continuous drain current based on maximum allowable junction temperature.
6. The static characteristics are obtained using  $<300\mu\text{s}$  pulses, duty cycle 0.5% maximum.
7. The  $R_{\theta JA}$  is the sum of thermal resistance from junction to case  $R_{\theta JC}$  and case to ambient.

**Characteristics (Tj=25°C, unless otherwise specified)**

## Typical Characteristics

Typical Output Characteristics

Breakdown Voltage vs Ambient Temperature

Static Drain-Source On-State resistance vs Drain Current

Reverse Drain Current vs Source-Drain Voltage

Static Drain-Source On-State Resistance vs Gate-Source Voltage

Drain-Source On-State Resistance vs Junction Temperature

## Typical Characteristics(Cont.)

Capacitance vs Drain-to-Source Voltage

Threshold Voltage vs Junction Temperature

Forward Transfer Admittance vs Drain Current

Gate Charge Characteristics

Maximum Safe Operating Area

Maximum Drain Current vs Case Temperature

## Typical Characteristics(Cont.)

Typical Transfer Characteristics

Single Pulse Maximum Power Dissipation

Transient Thermal Response Curves

### Recommended wave soldering condition

| Product         | Peak Temperature | Soldering Time  |
|-----------------|------------------|-----------------|
| Pb-free devices | 260 +0/-5 °C     | 5 +1/-1 seconds |

### Recommended temperature profile for IR reflow

| Profile feature                                     | Sn-Pb eutectic Assembly | Pb-free Assembly |
|-----------------------------------------------------|-------------------------|------------------|
| Average ramp-up rate ( $T_{smax}$ to $T_p$ )        | 3°C/second max.         | 3°C/second max.  |
| Preheat                                             |                         |                  |
| -Temperature Min( $T_{smin}$ )                      | 100°C                   | 150°C            |
| -Temperature Max( $T_{smax}$ )                      | 150°C                   | 200°C            |
| -Time( $t_{smin}$ to $t_{smax}$ )                   | 60-120 seconds          | 60-180 seconds   |
| Time maintained above:                              |                         |                  |
| -Temperature ( $T_L$ )                              | 183°C                   | 217°C            |
| - Time ( $t_L$ )                                    | 60-150 seconds          | 60-150 seconds   |
| Peak Temperature( $T_p$ )                           | 240 +0/-5 °C            | 260 +0/-5 °C     |
| Time within 5°C of actual peak temperature( $t_p$ ) | 10-30 seconds           | 20-40 seconds    |
| Ramp down rate                                      | 6°C/second max.         | 6°C/second max.  |
| Time 25 °C to peak temperature                      | 6 minutes max.          | 8 minutes max.   |

Note : All temperatures refer to topside of the package, measured on the package body surface.

## TO-220 Dimension

\*: Typical

Notes: 1.Controlling dimension: millimeters.

2.Maximum lead thickness includes lead finish thickness, and minimum lead thickness is the minimum thickness of base material.

3.If there is any question with packing specification or packing method, please contact your local CYStek sales office.

### Material:

- Lead: Pure tin plated.
- Mold Compound: Epoxy resin family, flammability solid burning class: UL94V-0.
