

C400 2.5-Inch SATA NAND Flash SSD

MTFDDAC128MAM, MTFDDAC256MAM, MTFDDAC512MAM MTFDDAK128MAM, MTFDDAK256MAM, MTFDDAK512MAM

Features

- Micron® 25nm MLC NAND Flash
- RoHS-compliant package
- SATA 6 Gb/s interface
- ATA modes supported
 - PIO mode 3, 4
 - Multiword DMA mode 0, 1, 2
 - Ultra DMA mode 0, 1, 2, 3, 4, 5
- Industry-standard, 512-byte sector size support
- Hot-plug capable
- Native command queuing support with 32-command slot support
- ATA-8 ACS2 command set compliant
- ATA security feature command set and password login support
- Secure erase (data page) command set: fast and secure erase
- Self-monitoring, analysis, and reporting technology (SMART) command set
- Performance^{1, 2}
 - Sequential 128k READ: up to 500 MB/s
 - Sequential 128k WRITE: up to 260 MB/s
 - Random 4k READ: up to 45,000 IOPS
 - Random 4k WRITE: up to 50,000 IOPS
 - PCMark® Vantage (HDD test suite score): up to 75,000
 - READ/WRITE latency: 55µs (TYP)

- Reliability
 - MTTF: 1.2 million device hours³
 - Static and dynamic wear leveling
 - Uncorrectable bit error rate (UBER): <1 sector per 10¹⁵ bits read
 - Low power consumption
 - <280mW TYP⁴
- Endurance: Total bytes written (TBW) 72TB
- Capacity⁵ (unformatted): 128GB, 256GB, 512GB
- Mechanical 9.5mm height
 - SATA connector: 5V ±10%
 - 2.5-inch drive: 100.5mm x 69.85mm x 9.5mm
 - Weight: 75g (MAX)
- Mechanical 7.0mm height
 - SATA connector: 5V ±10%
 - 2.5-inch drive: 100.5mm x 69.85mm x 7.0mm
 - Weight: 73g (MAX)
- Field-updateable firmware
- Operating temperature
 - Commercial (0°C to +70°C)⁶

Notes:

- 1. Typical I/O performance numbers as measured using lometer with a queue depth of 32 and write cache enabled.
- 4K transfers used for READ/WRITE latency values.
- 3. The product achieves a mean time to failure (MTTF) based on population statistics not relevant to individual units.
- 4. Active power measured during execution of MobileMark® 2007 with DIPM (device-initiated power management) enabled.
- 5. 1GB = 1 billion bytes; formatted capacity is less.
- 6. Drive case temperature.

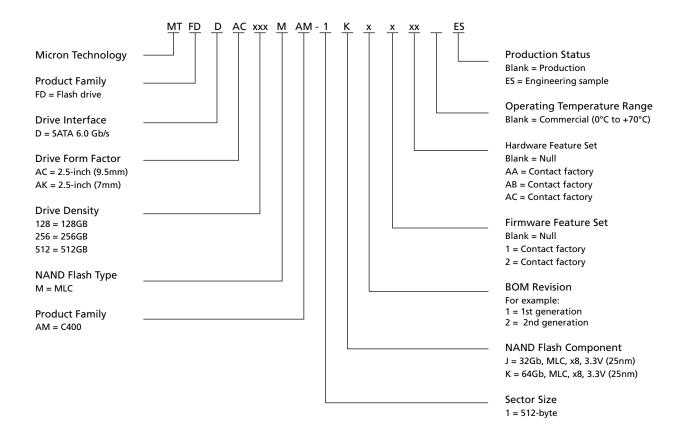

Warranty: Contact your Micron sales representative for further information regarding the product, including product warranties.

Part Numbering Information

Micron's C400 SSD is available in different configurations and densities. Visit www.micron.com for a list of valid part numbers.

Figure 1: Part Number Chart

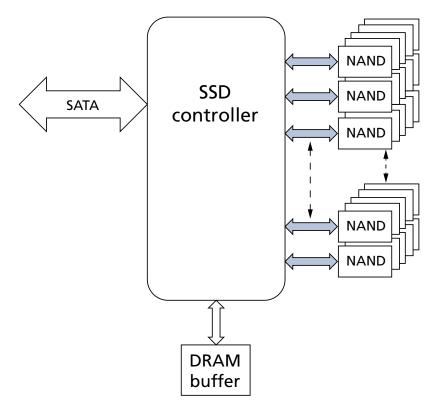

General Description

Micron's solid state drive (SSD) uses a single-chip controller with a SATA interface on the system side and n-channels of Micron NAND Flash internally. Packaged in an HDD replacement enclosure, the SSD integrates easily in existing storage infrastructures.

The SSD is designed to use the SATA interface efficiently during both READs and WRITEs while delivering bandwidth-focused performance. SSD technology enables enhanced boot times, faster application load times, reduced power consumption, and extended reliability.

Figure 2: Functional Block Diagram

Logical Block Address Configuration

The drive is set to report the number of logical block addresses (LBA) that will ensure sufficient storage space for the specified density. Standard LBA settings, based on the IDEMA standard (LBA1-02), are shown below.

Table 1: Standard LBA Settings

| | Total LBA | | Max | User Available Bytes | |
|------------|---------------|-------------|---------------|-------------------------|-----------------|
| Drive Size | Decimal | Hexadecimal | Decimal | Hexadecimal | (Unformatted) |
| 128GB | 250,069,680 | EE7C2B0 | 250,069,679 | EE7C2AF | 128,035,676,160 |
| 256GB | 500,118,192 | 1DCF32B0 | 500,118,191 | 1DCF32AF | 256,186,209,271 |
| 512GB | 1,000,215,216 | 3B9E12B0 | 1,000,215,215 | 3B9E12AF | 512,110,190,592 |

Physical Configuration

Table 2: 2.5-Inch Dimensions and Weight

| | Va | | |
|-------------|---------------|-------------|----------|
| | Height: 9.5mm | Height: 7mm | Unit |
| Width | 69.85 | 69.85 | mm (NOM) |
| Length | 100.50 | 100.50 | mm (NOM) |
| Unit weight | 75 | 73 | g (MAX) |

Interface Connectors

The SATA signal segment interface cable has four conductors and three ground connections. As shown in Package Dimensions, the cable includes a 7-pin signal segment and a 15-pin power segment arranged in a single row with a 1.27mm (0.050in) pitch.

Table 3: SATA Signal Segment Pin Assignments

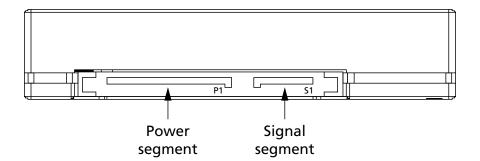

| Signal Name | Туре | Description |
|-------------|------|-------------------------------------|
| S1 | GND | Ground |
| S2 | А | — Differential signal pair A and A# |
| S3 | A# | Differential signal pair A and A# |
| S4 | GND | Ground |
| S5 | B# | — Differential signal pair B and B# |
| S6 | В | Differential signal pair 6 and 6# |
| S7 | GND | Ground |

Table 4: 2.5-Inch SATA Power Segment Pin Assignments

| Pin# | Signal Name | Description | |
|------|-------------|------------------------|--|
| P1 | V33 | No connect | |
| P2 | V33 | No connect | |
| P3 | V33 | No connect | |
| P4 | GND | Ground | |
| P5 | GND | Ground | |
| P6 | GND | Ground | |
| P7 | V5 | 5V power, precharge | |
| P8 | V5 | 5V power | |
| P9 | V5 | 5V power | |
| P10 | GND | Ground | |
| P11 | DAS | Device activity signal | |
| P12 | GND | Ground | |
| P13 | V12 | No connect | |
| P14 | V12 | No connect | |
| P15 | V12 | No connect | |

Figure 3: SSD Interface Connections

Performance

Measured performance can vary for a number of reasons. The major factors affecting drive performance are the density of the drive and the interface of the host. Additionally, overall system performance can affect the measured drive performance. When comparing drives, it is recommended that all system variables are the same, and only the drive being tested varies.

Performance numbers will vary depending on the host system configuration.

Table 5: Drive Performance

| Density | 128GB | 256GB | 512GB | |
|----------------------------------|--------|--------|--------|-----------|
| Interface Speed | 6 Gb/s | 6 Gb/s | 6 Gb/s | Unit |
| Sequential read (128k transfer) | 500 | 500 | 500 | MB/s |
| Sequential write (128k transfer) | 175 | 260 | 260 | MB/s |
| Random read (4k transfer) | 45K | 45K | 45K | IOPs |
| Random write (4k transfer) | 35K | 50K | 50K | IOPs |
| Read latency | 55 | 55 | 55 | μs |
| Write latency | 55 | 55 | 55 | μs |
| PCMark vantage | 65K | 75K | 75K | HDD score |

- Notes: 1. Typical I/O performance numbers as measured using IOMeter with a queue depth of 32 and write cache enabled.
 - 2. IOMeter measurements are performed on an 8GB span.
 - 3. 4k transfers used for READ/WRITE latency values.
 - 4. System variations may affect measured results.
 - 5. Performance numbers are indicative of C400 firmware version 0009 and newer.

Reliability

Micron's SSDs incorporate advanced technology for defect and error management. They use various combinations of hardware-based error correction algorithms and firmware-based static and dynamic wear-leveling algorithms.

Over the life of the SSD, uncorrectable errors may occur. An uncorrectable error is defined as data that is reported as successfully programmed to the SSD but when it is read out of the SSD, the data differs from what was programmed.

Table 6: Uncorrectable Bit Error Rate

| Uncorrectable Bit Error Rate | Operation |
|--|-----------|
| <1 sector per 10 ¹⁵ bits read | READ |

Mean Time To Failure

Mean time to failure (MTTF) for the SSD can be predicted based on the component reliability data using the methods referenced in the Telcordia SR-332 reliability prediction procedures for electronic equipment.

Table 7: MTTF

| Density | MTTF (Operating Hours) ¹ |
|---------|-------------------------------------|
| 128GB | 1.2 million |
| 256GB | 1.2 million |
| 512GB | 1.2 million |

Note: 1. The product achieves a mean time to failure (MTTF) of 1.2 million hours, based on population statistics not relevant to individual units.

Endurance

Endurance for the SSD can be predicted based on the usage conditions applied to the device, the internal NAND component cycles, the write amplification factor, and the wear-leveling efficiency of the drive. The table below shows the drive lifetime for each SSD density based on predefined usage conditions.

Table 8: Drive Lifetime

| Density | Drive Lifetime (Total Bytes Written) |
|---------|--------------------------------------|
| 128GB | 72TB |
| 256GB | 72TB |
| 512GB | 72ТВ |

- Notes: 1. Total bytes written calculated with the drive 90% full.
 - 2. Access patterns are 50% sequential and 50% random and consist of the following: 5% are 4k; 5% are 8k; 10% are 16k; 10% are 32k; 35% are 64K; and 35% are 128k.
 - 3. GB/day can be calculated by dividing the total bytes written value by (365 x number of years). For example: 72TB/5 years/365 days = 40 GB/day for 5 years.

Electrical Characteristics

Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Table 9: SATA Power Consumption

| Density | Idle Average | Active Average | <u>-</u> | e/Read Maximum ransfer) | Unit |
|---------|--------------|----------------|----------|----------------------------|------|
| 128GB | <85 | 150 | 3500 | 2000 | mW |
| 256GB | <85 | 160 | 4000 | 2200 | mW |
| 512GB | <100 | 280 | 5500 | 2500 | mW |

- 1. Data taken at 25°C using a 6 Gb/s SATA interface.
- 2. Active average power measured while running MobileMark® 2007 Productivity Suite.
- 3. DIPM (device-initiated power management) enabled.
- 4. Sequential power measured in IOMETER MAX with 128KB transfer size.

Table 10: Maximum Ratings

| Parameter/Condition | Symbol | Min | Мах | Unit |
|------------------------------------|----------------|-----|-----|---------|
| Voltage input | V5 | 4.5 | 5.5 | V |
| Operating temperature | T _C | 0 | 70 | °C |
| Non-operating temperature | | -40 | 85 | °C |
| Rate of temperature change | | _ | 20 | °C/hour |
| Relative humidity (non-condensing) | | 5 | 95 | % |

- Notes: 1. Temperature is best measured with a thermocouple attached to the center point of the exterior of the case on the cast side (side where the SATA connector is visible). Contact with the drive label is acceptable.
 - 2. Power-off sequence: When the Micron C400 SSD is shut down, the ATA STANDBY IMME-DIATE (STBI) command should be the last command sent by the host and acknowledged by the SSD. Failure to follow this process might result in a longer than normal time-toready (TTR) during the subsequent power-on sequence. TTR is the time from power-on to drive ready to accept SATA commands.

Table 11: Shock and Vibration

| Parameter/Condition | Specification |
|---------------------|-----------------|
| Operating shock | 1500 G/1.0ms |
| Operating vibration | 2–500Hz at 3.1G |

Device ID

Commands

Table 13: Supported ATA Command Set

See ATA-8 standard for command details

| Command Name | Command Code (hex) |
|------------------------------------|------------------------|
| CHECK POWER MODE | 98h or E5h |
| DEVICE CONFIGURATION RESTORE | B1h/C1h |
| DEVICE CONFIGURATION FREEZE LOCK | B1h/C3h |
| DEVICE CONFIGURATION IDENTIFY | B1h/C1h |
| DEVICE CONFIGURATION SET | B1h/C3h |
| DOWNLOAD MICROCODE | 92h |
| EXECUTE DEVICE DIAGNOSTIC | 90h |
| FLUSH CACHE | E7h |
| FLUSH CACHE EXT | EAh |
| IDENTIFY DEVICE | ECh |
| IDLE | E3h or 97h |
| IDLE IMMEDIATE | E1h or 95h |
| INITIALIZE DEVICE PARAMETERS | 91h |
| NOP | 00h |
| READ BUFFER | E4h |
| READ DMA (with retry) | C8h |
| READ DMA (without retry) | C9h |
| READ DMA EXT | 25h |
| READ FPDMA QUEUED | 60h |
| READ LOG EXT | 2Fh |
| READ MULTIPLE | C4h |
| READ MULTIPLE EXT | 29h |
| READ NATIVE MAX ADDRESS | F8h |
| READ NATIVE MAX ADDRESS EXT | 27h |
| READ SECTOR(S) EXT | 24h |
| READ SECTOR(S) (with retry) | 20h |
| READ SECTOR(S) (without retry) | 21h |
| READ VERIFY SECTOR EXT | 42h |
| READ VERIFY SECTOR(S) (with retry) | 40h |
| SCT WRITE SAME | 02h/0001h |
| | 02h/0002h |
| | 02h/0101h 02h/0102h |
| SCT RETURN ERROR RECOVERY CONTROL | 030h/01h |
| SCT SET ERROR RECOVERY CONTROL | 03h/01h |
| SCT SET FEATURE CONTROL | 04h/01h |
| SCT RETURN FEATURE CONTROL | 04h/02h |
| JCT RETORITE EATONE CONTINUE | V711/V211 |

Table 13: Supported ATA Command Set (Continued)

See ATA-8 standard for command details

| Command Name | Command Code (hex) |
|----------------------------------|--------------------|
| SCT RETURN FEATURE OPTION FLAG | 04h/03h |
| SCT RETURN SCT DATA TABLE | 05h/01h |
| SECURITY DISABLE PASSWORD | F6h |

| WRITE LOG EXT | 3Fh |
| WRITE MULTIPLE | C5h |
| WRITE MULTIPLE EXT | 39h |

Table 13: Supported ATA Command Set (Continued)

See ATA-8 standard for command details

| Command Name | Command Code (hex) |
|------------------------------|--------------------|
| WRITE MULTIPLE FUA EXT | CEh |
| WRITE SECTOR(S) (with retry) | 30h |
| WRITE SECTOR(S) EXT | 34h |
| WRITE UNCORRECTABLE EXT | 45h |

Compliance

Micron SSDs comply with the following:

- · RoHS "green"
- CE (Europe): EN55022, 2006 Class B and EN55024, 1998 + A1: 2001 + A2:2003
- FCC: CFR Title 47, Part 15, ICES-003, all Class B
- UL (US): approval to UL-60950-1, 2nd Edition, 2007-03-27, IEC 60950-1:2005, 2nd Edition
- BSMI (Taiwan): approval to CNS 13438
- C-TICK (Australia, New Zealand): approval to AS/NZS CISPR22
- KCC RRL (Korea): approval to KCC MU2-C30025, KCC MU2-C30018 Class B
- W.E.E.E.: Compliance with EU WEEE directive 2002/96/EC. Additional obligations
 may apply to customers who place these products in the markets where WEEE is enforced.
- TUV (Germany): approval to IEC60950/EN60950
- V_{CCI}
- IC (Canada):
 - This Class B digital apparatus complies with Canadian ICES-003.
 - Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

FCC Rules

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Package Dimensions

Figure 4: 2.5-Inch Package - 9.5mm

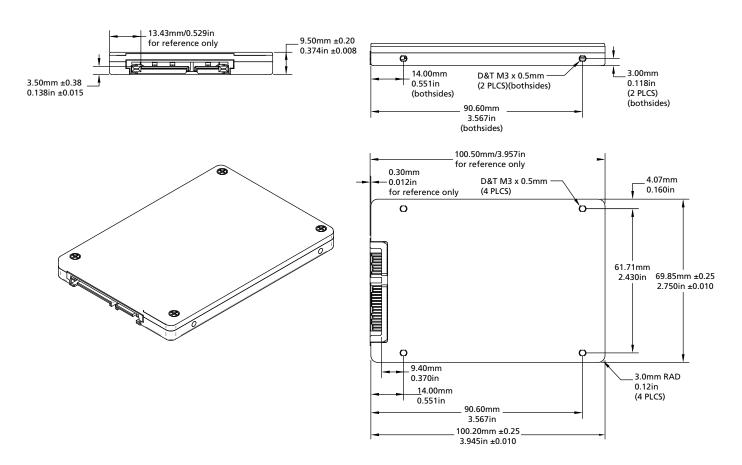

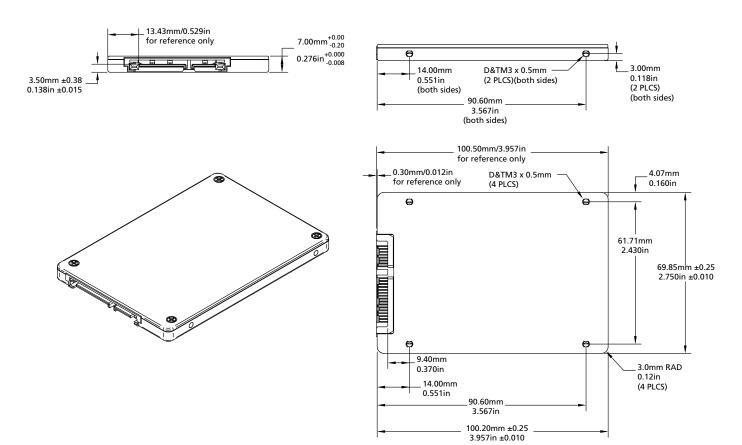

Figure 5: 2.5-Inch Package - 7mm

Revision History

Rev. F - 07/12

- Changed mean time between failure (MTBF) to mean time to failure (MTTF)
- Added a wildcard x to part number chart
- Added a power-off sequence note to the maximum ratings table
- Added information to the Identity Device table, Word 76, bit 9

Rev. E - 05/12

• Updated BOM Revision in Part Number Chart

Rev. D - 09/11

• Added FCC rules to Compliance

Rev. C - 09/11

- Updated Performance specifications in Features
- Updated Drive Performance table values in Performance
- Updated Electrical Specifications
- Updated word 85, bit 0b to 1b (SMART feature set enabled) in Device ID

Rev. B, Preliminary - 06/11

- · Corrected typo in capacity points
- Updated mechanical drawing dimensions (document change only)
- Clarified temperature specification
- Clarified performance test conditions for data transfer sizes

Rev. A, Preliminary - 02/11

· Initial release
