CHINE OPTOELECTRONICS CORP.

1. Handling Precautions

- If any signals or power lines deviate from the power on/off sequence, it may cause shorten the life of the LCD module.
- The LCD panel and the CFL are made of glass and may break or crack if dropped on a hard surface, so please handle them with care.
- CMOS ICs are included in the LCD panel. They should be handled with care, to prevent electrostatic discharge.
- Do not press the reflector sheet at the LCD module to any directions.
- Do not stick the adhesive tape on the reflector sheet at the back of the LCD module.
- Please handle with care when mount in the system cover. Mechanical damage for lamp cable/lamp connector may cause safety problems.
- Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (2.11, IEC60950 or UL60950), or be applied exemption conditions of flammability requirements (4.4.3.3, IEC60950 or UL60950) in an end product.
- The LCD module is designed so that the CFL in it is supplied by Limited Current Circuit (2.4, IEC60950 or UL60950).
- The fluorescent lamp in the liquid crystal display (LCD) contains mercury. Do not put it in trash that is disposed of in landfills. Dispose of it as required by local ordinances or regulations.
- Never apply detergent or other liquid directly to the screen.
- Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth; do not use solvents or abrasives.
- Do not touch the front screen surface in your system, even bezel.
- Gently wipe the covers and the screen with a soft cloth.

The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by CHI MEI Optoelectronics for any infringements of patents or other right of the third partied which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of CHI MEI Optoelectronics or others.

Version 3.3

2. General Description

- This specification applies to 12.1 inch Color TFT/LCD Module 'N121X4-L02'.
- This module is designed for a display unit of notebook style personal computer.
- The screen format and electrical interface are intended to support the XGA (1024(H) x768 (V)) screen.
- This module contains an inverter card for backlight.
- BIST (Built-In Self Test) function
- VESA CVT reduced blanking mode support
- Compliant with RoHS (Restriction of the Use of Certain Hazardous Substances) directive

2.1 Product Summary

Table 1 shows the summary of this LCD module. Unless otherwise noted, all characteristics are at 25 degree C condition.

ITEMS	SPECIFICATIONS
Screen Diagonal [mm]	307.2
Active Area [mm]	245.76(H) x 184.32(V)
Pixels H x V	1024(x3) x 768
Pixel Pitch [mm]	0.240(per one triad) x 0.240
Pixel Arrangement	R.G.B. Vertical Stripe
Display Mode	Normally White
White Luminance [cd/m2]	150 typ. (5 Points average, SMData=00H)
Contrast Ratio	300: 1 Тур.
Optical Rise Time + Fall Time [msec]	50Max.
Nominal Input Voltage[Volt]	
VDD	+3.3 Тур
5VSUS, 5VALW line	+5.0 Тур
PWR_SRC line	+14.4 Typ.
Logic Power Consumption [watt](VDD Line)	0.9 Typ. (All Black Pattern)
Backlight Power Consumption [watt]	4.4 Max(SMData=00H)
Weight [grams]	280 Typ, 295 max. (with inverter)
Physical Size [mm]	261.0(W) x 209.5(H) x 4.7(D) Typ. (with Inverter space)
	261.0(W) x 198.0(H) x 4.7(D) Typ. (without inverter space)
Electrical Interface (Logic)	Single LVDS(4 pairs LVDS)
	EEDID (clock, data)
	BISTEN
Electrical Interface (Inverter)	SMB_CLK, SMB_DAT, FPVEE, LAMP_STAT
Support Color	Native 262K colors (RGB 6-bit data driver)
Temperature Range (degree C)	
Operating	0 to +50
Storage (Shipping)	-20 to +60

6. Optical Characteristics

6.1 **Optical Characteristics**

The optical characteristics are measured under stable conditions as follows under 25 degree C condition:

Table 3 Optical characteristics						
Item	Conditions	Specification				
		Min	Тур.	Max	Note	
Viewing Angle (Degrees)	Horizontal (Right)	40	-	-		
	K>10(Left)	40	-	-		
K: Contrast Ratio	Vertical (Upper)	15	-	-		
	K>10 (Lower)	30	-	-		
Contrast ratio		230	300			
Response Time(ms)	Rising + Falling	-	-	50		
Color Chromaticity(CIE)	Red x	0.558	0.584	0.610	+/-0.026	
	Red y	0.308	0.336	0.364	+/-0.028	
	Green x	0.296	0.322	0.348	+/-0.026	
	Green y	0.506	0.534	0.562	+/-0.028	
	Blue x	0.125	0.151	0.177	+/-0.026	
	Blue y	0.100	0.128	0.156	+/-0.028	
	White x	0.287	0.313	0.339	+/-0.026	
	White y	0.301	0.329	0.357	+/-0.028	
White Luminance(cd/m2)	5 Points average	127	150

• Chromaticity and White Balance are defined as the C.I.E. 1931 x,y coordinates at the center of LCD. The Standard Equipments are as shown below table.

(X=0, Y=0, Z=0)

Table 4 Standard Equipments			
Item	Standard Equipment		
Viewing Angle	MCPD-7000 by Ohtsuka Elec.		
Contrast	MCPD-7000 by Ohtsuka Elec.		
Response Time	BM5A by TOPCON OPTICAL Co.,Ltd.		
White Luminance	MCPD-7000 by Ohtsuka Elec.		
Luminance Uniformity	MCPD-7000 by Ohtsuka Elec.		
Chromaticity	MCPD-7000 by Ohtsuka Elec.		
White Balance	MCPD-7000 by Ohtsuka Elec.		

The measurement is to be done after 30 minutes of Power-on of Backlight. Unless otherwise specified, the ambient conditions are as following.

7.2 LVDS Receiver

7.2.1. Signal Electrical Characteristics for LVDS Receiver

The built-in LVDS receiver is compatible with ANSI/TIA/TIA-644 standard.

Table 9 LVDS Receiver Electrical Characteristics

Parameter	Symbol	Min	Тур	Max	Unit	Conditions
Differential Input High Threshold	Vth			+100	mV	Vcm=+1.2V
Differential Input Low Threshold	Vtl	-100			mV	Vcm=+1.2V
Magnitude Differential Input Voltage	Vid	100		600	mV	
Common Mode Voltage	Vcm	1.0	1.2	1.4	V	Vth - Vtl = 200mV
Common Mode Voltage Offset	∆Vcm	-50		+50	mV	Vth - Vtl = 200mV

Note:

• Input signals shall be low or Hi-Z state when VDD is off.

• All electrical characteristics for LVDS signal are defined and shall be measured at the interface connector of LCD.

Parameter	Symbol	min	typ	max	unit
Input low voltage	VIL	0		0.3VDD	V
Input high voltage	VIH	0.7VDD		VDD	V
Input leakage current	IIZ	-10		10	uA

Table 10 Timing Requirements

Parameter	Symbol	Min	Тур	Max	Unit	Conditions	Note
Clock Frequency	fc	50	56	67	MHz		VESA XGA CVT reduced blanking
Cycle Time	tc	14.93	17.86	20.00	ns		
Data Setup Time	Tsu	600			ps	fc = 56MHz	(See Figure 9)
Data Hold Time	Thd	600			ps	tCCJ < 50ps	(See Figure 9)
						Vth-Vtl = 200m	
						Vcm = 1.2V	
						∆Vcm = 0	
Cycle-to-cycle jitter	tCCJ	-150		+150	ps	fc = 56MHz	Jitter is the magnitude of the change in input
		•				Tsu=Thd=600ps	clock period.
Cycle Modulation	tCJavg			20	ps/clk	fc = 56MHz	tCJavg is maximum average cycle
Rate						Tsu=Thd=600ps	modulation rate in peak-to-peak transition
							within any 100-clock cycles. Figure 10 Cycle
							Modulation Rate illustrates a case against
							this requirement. This specification is
							applied only if input clock peak jitter within
							any 100-clock cycles is greater than 300ps.

Note:.All values are at VDD=3.3V, Ta=25 degree C.

7.2.3. Recommended Guidelines for Motherboard PCB Design and Cable Selection

Following the suggestions below will help to achieve optimal results.

- Use controlled impedance media for LADS signals. They should have a matched differential impedance of 100 ohm.
- Match electrical lengths between traces to minimize signal skew.
- Isolate TEL signals from LADS signals.
- For cables, twisted pair, twin, or flex circuit with close coupled differential traces are recommended.

7.3 Interface Timings

VESA CVT reduced blanking timing is supported.

If timing signal is invalid, the LCD enters "self protection mode" and the screen becomes whole black. Once the signal is back, it resumes normal operation.

7.3.1. Timing Characteristics

7.7 BIST

This LCD has BIST(Built-In Self Test) function.

When in BIST mode, LCD display 5 rotating patterns automatically every two seconds, as shown in "Figure 14 BIST display data patterns".

To enter BIST mode, BISTEN pin must be set to H and LVDS clock must be suspended. Note that logic level of differential inputs must be stable; i.e., RxCLK+ = L and RxCLK- = H, or vice versa. See "Table 16 Operation mode" and "Figure 15 Entering/leaving BIST mode".

In any circumstances, do not drive BISTEN to H while VDD is off. Such reverse voltage bias may damage the timing controller LSI.

Table 16 Operation mode

	LVDS clock is active	LVDS clock is suspended
BISTEN=L	Normal operation: displays the image from	Self-protection mode: displays whole black
	host graphics system.	screen.
BISTEN=H	If previous state is "normal operation"(BIST=H and LVDS clock is active), continues normal operation. Otherwise, displays all black for five seconds, then enters LCD manufacturer's test mode. This state is considered "transitional" and should not continue more than 100ms.	BIST mode: displays 5 self-rotating patterns every 2 seconds.

CHINEL OPTOELECTRONICS CORP.

Issued Date: May. 16 2005 Model No: N121X4-L02

9. Qualifications and CFL Life

This Quality Specification is supplied from CHI MEI Optoelectronics to the customer.

Please pay attention the following items, when this LCD Module is checked in your inspection.

- You should consider the LCD Module to mount that uneven force is not applied to this LCD Module.
- Do not push and put a label on the rear side that is located backlight.
- Do not joggle the LCD Module, there will be some ripple on the screen.
- Display qualifications depend on the power on time. The visual screen quality is applied the state since 30 seconds after power on.

9.1 Visual Screen Quality

Table 21 shows the visual screen quality of the general TFT-LCD module at power-off.

Polarizer Scratch/Bubble	Size (mm)	Allowable maximum counts					
Elliptical defects	d < 0.2	Disregarded					
	u · 0.2	Disregulaca					
	0.2 <u>≤</u> d < 0.4	5					
	0.4 <u>≤</u> d	0					
Linear defects	w < 0.07	Disregarded					
	0.07 <u>≤</u> w < 0.1 and I < 3.0	5					
	0.1 ≦ w or 3.0 ≦ l	0					

Table 21 Visual screen quality

- d : diameter, d= (longaxis + shortaxis) / 2
- w : line width
- I : line length

9.2 Line Defect

- No visible line defect is allowed in entire screen.
- A Line Defect is defined as a horizontal and vertical apparent line, visible through 5% ND-filter, that differs from adjacent lines at any gray raster pattern.

Version 3.3

Issued Date: May. 16 2005

Model No: N121X4-L02

9.3 Bright and Black Dots

The following Table describes the specification of bright and black dots in the visual screen quality of the TFT-LCD module at power-ON.

Table 22 Pixel defects						
Items	Spe	Specification				
Any Bright Dots	0					
Any Black Dots	8	Max				
Bright and Black Dots(total)	8	Max				
Two Joined Bright Dots	0					
Two Joined Black Dots	3	Pair Max				
Three Joined Black Dots	1	Max				
Bright/Black Dots Distance (Any Combination)	5	mm Min				
Definitions:						
1. A Bright Dot is any one of a stuck Red, Green	or Blue pixe	el visible throug	h 5% ND-filter under			
all black background.						
2. A Black Dot is an unlit pixel under any of White, Rec	d, Green or E	Blue bright raste	r.			
Note : A lit is agreed separately by demonstrated mode	ule.					
Basic Conditions:						
Viewing Distance 3	50 to 500 mi	m				
Ambient Illumination 3	00 to 700 lux	x				
Ambient Temperature 2	0 to 25 degr	eeC				

9.4 CFL Life

	Table 23 CF	L life			
CFL Life Time	10,000 Hours	condition 4.5mArms	25	deg.C	and
The accumed CEL Life wi	Il bo until the luminance becomes	50% of its initial value	`		

The assumed L Life will be until the luminance becomes 50% of its initial value.

12. Appendix

12.1 National Test Lab Requirement

The display module will satisfy all requirements for compliance to UL 60950, 3rd Edition. U.S.A. Information Technology Equipment.

12.2 Conditions of Acceptability

When installed on the end product, consideration shall be given to the following.

- This component has been judged on the basis of the required specification in *The Standard for Safety of Information Technology Equipment*, CAN/CSA C22.2 No.60950-00 *UL60950, Third Edition, which would cover the component itself if submitted for listing.
- The inverter output circuit is Limited Current Circuits.
- The unit is intended to be supply by SELV and Limited Power Source. Also separated from electrical parts, which may produce high temperature that could cause ignition by as least 13mm of air or by a solid barrio of material of V-1 minimum.
- The terminals and connectors are suitable for factory wiring only.
- A suitable electrical enclosure shall be provided.
