### **1. GENERAL DESCRIPTION**

### **1.1 OVERVIEW**

N133BGE-P42 is a 13.3 TFT Liquid Crystal Display with 30-pins-and-1ch-LVDS circuit board. This product supports 1366 x 768 HD mode and can display 262,144 colors. The backlight unit and converter are not built in.

### **1.2 GENERAL SPECIFICATIONS**

Note (0) Light source is the standard light source "C" which is defined by CIE and driving voltages are based on suitable gamma voltages. The calculating method is as following :

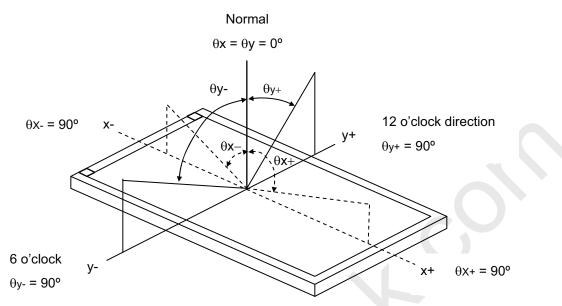

- 1. Measure Module's and BLU's spectrums. White is without signal input and R, G, B are with signal input. BLU is supplied by CMI.
- 2. Calculate cell's spectrum.
- 3. Calculate cell's chromaticity by using the spectrum of standard light source "C"
- Note (1) Light source is the BLU which is supplied by CMI and driving voltages are based on suitable gamma voltages. White is without signal input and R, G, B are with signal input. Spec is judged by CMI's golden sample.

# PRODUCT SPECIFICATION

Note (2) Definition of Viewing Angle ( $\theta x$ ,  $\theta y$ ):

Note (3) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR) = L63 / L0

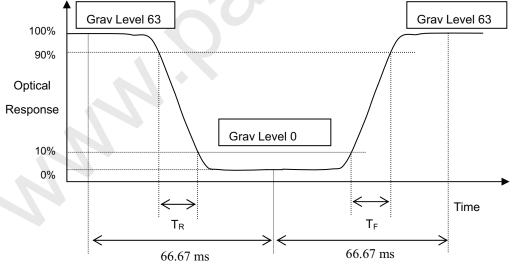

L63: Luminance of gray level 63

L 0: Luminance of gray level 0

CR = CR(1)

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Note (4) Definition of Response Time  $(T_R, T_F)$ :

Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

### 7. PRECAUTIONS

### 7.1 HANDLING PRECAUTIONS

- (1) The open cell should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the open cell.
- (2) While assembling or installing open cell, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the open cell from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the open cell.
- (10) Pins of I/F connector should not be touched directly with bare hands.

### 7.2 STORAGE PRECAUTIONS

- (1) High temperature or humidity may reduce the performance of open cell. Please store open cell within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the open cell, because the moisture may damage open cell when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly.

### **7.3 OPERATION PRECAUTIONS**

- (1) Do not pull the I/F connector in or out while the open cell is operating.
- (2) Always follow the correct power on/off sequence when open cell is connecting and operating. This can prevent the CMOS LSI chips from damage during latch-up.
