1. GENERAL DESCRIPTION

The NCT3940S/ NCT3940S-A is a simply linear fan driver. It is designed for noise-sensitive or power-sensitive applications that require system cooling. The NCT3940S/ NCT3940S-A is a low quiescent current, low dropout linear regulator which is designed with a P-channel MOSFET to power a DC fan and delivers output current up to 500mA. The output voltage follows the 1.6 times on the voltage of V_{SET} pin to dynamic adjust the DC fan speed. NCT3940S supports enable pin to control the output voltage. NCT3940S-A is power-on by the VSET pin voltage threshold and supports fully turn-on function. The internal power MOSFET can be fully turned on directly when FON# is at low level. NCT3940S/ NCT3940S-A is available in SOP-8 package.

2. FEATURES

2.1. General

- VOUT Follows 1.6 Times of VSET
- 150mV Dropout @ 0.5A Output Current
- 5uA Quiescent Current in Shutdown Mode
- UVLO Function
- Full On Function
- Over Current, Short Circuit and Over Temperature Protections
- Low External Component Count
- Low Cost and Easy to Use

2.2. Package

- SOP-8 150mil with Exposed Pad Package
- Lead Free (ROHS Compliant) and Halogen Free

2.3. Application

- Notebook/ Netbook Fan Driver
- Peripheral Add-in Cards
- Motherboards
- Battery Powered Systems

5. PIN DESCRIPTION

PIN NAME	NO		PIN TYPE	DESCRIPTION
	NCT3940S	NCT3940S-A		
FON#	N/A	1	I	Only for NCT3940S-A device. Full On mode selection pin. Output voltage follows 1.6 times of V_{SET} pin voltage when FON# pin at high level. The internal power MOSFET full turns on when FON# pin at low level. Internal pull up resistor connected to V_{IN} .
EN	1	N/A	I	Only for NCT3940S device. Enable pin. Output voltage follows 1.6 times of V_{SET} pin voltage when Enable pin at high level.
V_{IN}	2		POWER	DC power supply input. Connect a bypass capacitor (4.7uF, typically) is recommended.
V_{OUT}	3		AO	Voltage output pin. Connect a low ESR ceramic capacitor (4.7uF, typically) to ground to assure stability.
V_{SET}	4		AIN	Output voltage setting pin. The inputs could be DC voltage. The input voltage must be larger than 1V.

GND	5~8	GROUND	Power supply ground.
PIN TYPE	PIN Attribute		
AO	Output pin (Analog)		
AIN	Input pin (Analog)		
I	Input pin (Digital)		
POWER	Positive power supply input		
GROUND	Power supply ground		

6. FUNCTIONAL DESCRIPTION

6.1 General Description

The NCT3940S/ NCT3940S-A is a low quiescent current, low dropout linear regulator which is designed with a P-channel MOSFET to power a DC fan. It can deliver output current up to 500mA. The output voltage follows the 1.6 times on the voltage of V_{SET} pin to dynamic adjust the DC fan speed. NCT3940S supports enable pin to control the output voltage. NCT3940S-A is power-on by the VSET pin and supports fully turn-on function.

6.2 Under Voltage Lockout, UVLO

The NCT3940S/ NCT3940S-A was built-in a UVLO protection to keep the output off until the internal circuitry is operating properly. Typical UVLO threshold is 2.5V with 0.15V hysteresis.

6.3 Full On Function

The function is for NCT3940S-A only. The input voltage level of FON# can control the internal regulator fully turn on or following 1.6 times of V_{SET} voltage. When pulling this pin below 0.4V, the regulator will be fully turned on. When pulling this pin above 1.6V, the output voltage will follow 1.6 times of V_{SET} voltage.

6.4 VSET Setting

The output voltage is 1.6 times of V_{SET} pin voltage. If the input voltage of V_{SET} is under 1V, the internal regulator will be turned off. When the V_{SET} voltage exceeds 1V, the output voltage will follow 1.6 times of V_{SET} voltage.

6.5 Current Limit

The NCT3940S/ NCT3940S-A provides a current limit circuitry, which monitors the output current and controls PMOS gate voltage to limit the output current at a specific value.

6.6 Thermal Shutdown

The NCT3940S/ NCT3940S-A has a thermal shutdown circuitry to limit the junction temperature. When the junction temperature exceeds 150° C, the thermal shutdown circuits disable the output, allowing the device to cool down. The output circuitry is enabled again after the junction temperature cools down by 30° C, resulting in a pulsed output during continuous thermal overload conditions. The thermal protection is designed to protect the IC in the event of over temperature conditions. For reliable operation, the junction temperature cannot exceed 125° C.

6.7 VIN Decoupling

To achieve the best results when using the NCT3940S/ NCT3940S-A, decouple the power supply with a 4.7uF capacitor. Use a high quality ceramic surface mount capacitor if possible. Surface mount components minimize lead inductance, which improves performance, and ceramic capacitors tend to have adequate high frequency response for decoupling applications.

6.8 VOUT Stability

To maintain circuit stability and improve transient response over temperature and current, the NCT3940S/ NCT3940S-A needs a suitable output capacitor. In order to insure the circuit stability, the suitable output capacitor should be larger than 4.7uF.

7. ELECTRICAL CHARACTERISTIC

7.1 Absolute Maximum Ratings

PARAMETER		RATING	UNIT
Power Supply Voltage		-0.3 to 7V	V
Voltage on Other Pins		-0.3 to 7V	V
Storage Temperature		-50 to 150	°C
Soldering Temperature		Refer to IPC/JEDEC J-STD-020 Specification	
ESD Protection	Human Body Mode	2	kV
	Machine Mode	200	V
	Latch-up	100	mA

Note: Exposure to conditions beyond those listed under Absolute Maximum Ratings may adversely affect the life and reliability of the device.

7.2 Thermal Information

ITEM	RATING	UNIT
Power Dissipation, P_D @ $T_A=25^{\circ}\text{C}$	Internal Limited	W
Package Thermal Resistance, SOP8, θ_{JA}	160	°C/W

7.3 Recommended operating conditions

PARAMETER	RATING	UNIT
Operating Temperature	0 to 70	°C
Junction Temperature	-40 to 125	°C
Supply Voltage, VCC	$5 \pm 10\%$	V

7.4 Electrical CHARACTERISTICS

$V_{IN}=5V$, $V_{SET}=2V$, $C_{IN}=C_{OUT}=2.2\mu F$, $T_a=25^{\circ}C$

PARAMETER	SYM.	MIN.	TYP.	MAX.	UNIT	CONDITIONS
Supply Input Voltage						
Supply Input Voltage	V_{IN}	4.5		5.5	V	
Under Voltage Lockout (UVLO)						
V_{IN} UVLO Threshold		2.1	2.5	2.9	V	V_{IN} rising
V_{IN} UVLO Hysteresis			0.15		V	
EN Pin						
EN Voltage High		2.0			V	
EN Voltage Low				0.4	V

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.
