

Output Coupling Capacitor-less Video Amplifier with Power Supply Short-circuit Protection

■GENERAL DESCRIPTION

The NJM2559 is a output coupling capacitor-less video amplifier with power supply short-circuit protection.*

When the DC voltage is impressed to the output terminal, it becomes a power saving mode, and IC is protected.

The NJM2559 is suitable for the video application at risk of power supply short-circuit.

*DC coupling. You must not connect an output capacitor.

NJM2559RB1

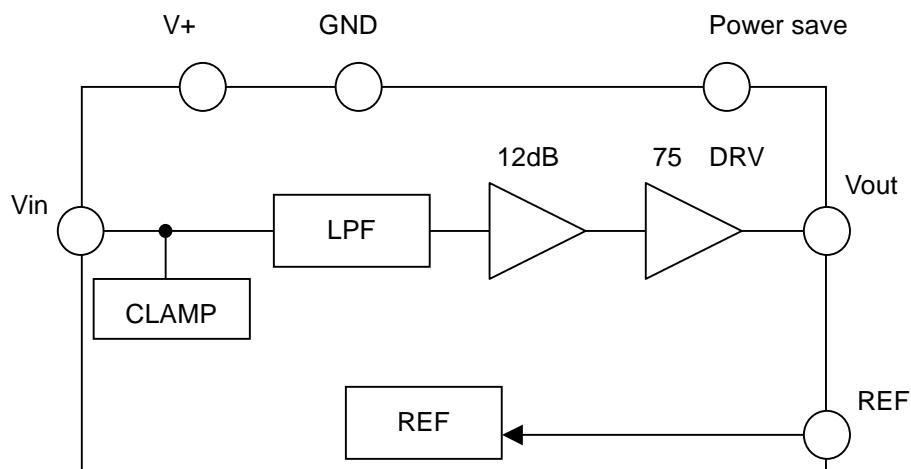

■FEATURES

- Operating Voltage 4.5 to 5.5V
- Output Coupling Capacitor-less (0.5V DC Output)
- Power Supply Short-circuit Protection Circuit
- Internal LPF -32dB typ. at 19MHz
- 12dB Amplifier
- 75Ω Driver
- Power-save Circuit
- Bipolar Technology
- Package Outline TVSP8

■ TEST CIRCUIT

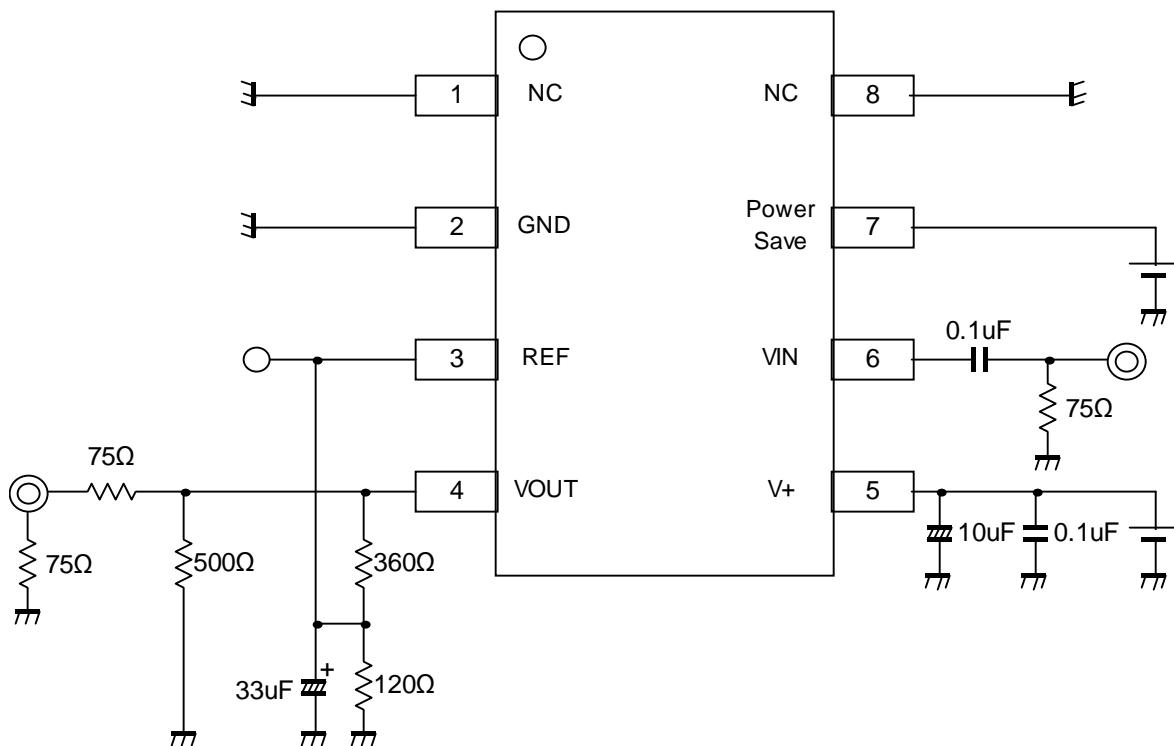

■ APPLICATION

Please connect the capacitor of power supply terminal (pin 5) near IC.
 You must not connect an output capacitor.
 External resistance must use power dissipation :125mW or more.
 When 120Ω x3 are replaced with 360Ω, 400mW or more is recommended.

■ APPLICATION CIRCUIT: Power Supply Short-circuit for 18Vmax)

■ APPLICATION

Please connect the capacitor of power supply terminal (pin 5) near IC.

You must not connect an output capacitor.

The power dissipation of external resistance is as follows.

When the power supply short-circuit voltage is 18Vmax, the current that flows to each resistance is as follows.

- 75Ω (series resistance): about 60mA
- 360Ω, 120Ω (power supply short-circuit detection resistance): about 30mA
- 500Ω(pull-down resistance): about 30mA

The power dissipation recommendation value of each resistance is as follows.

- 75Ω (series resistance): 300mW or more
- 360Ω(power supply short-circuit detection resistance): 400mW or more
- 120Ω(power supply short-circuit detection resistance): 125mW or more
- 500Ω(pull-down resistance): 500mW or more

The load resistance of NJM2559 is about 93Ω in this application circuit.

Please use it more than 93Ω.

Moreover, supply current increases by 1mA when comparing with test circuit.

Mode1: Power supply short-circuit protection OFF→ON

The voltage is applied to OUT from 0V in the step of +0.1V. Each voltage when the voltage of VIN began to fall on Low is measured.

Mode2: Power supply short-circuit protection ON→OFF

The voltage is applied to OUT from 16V in the step of -0.1V. Each voltage when the voltage of VIN becomes 1.4V is measured.
