

## Multi Input Wide Band Video Interface with I<sup>2</sup>C Control

### ■ GENERAL DESCRIPTION

**NJW1329** is a multi input wide band video interface IC with I<sup>2</sup>C control. Also the **NJW1329** includes 7-input 2 channel video switch for CVBS, 3-input 1 channel video switch for Component Video Signal, 2 channel 75-ohm driver for CVBS and 1 channel 75-ohm driver for Component Video Signal.

**NJW1329** is suitable for video equipment that has multi input and multi output.

### ■ PACKAGE OUTLINE

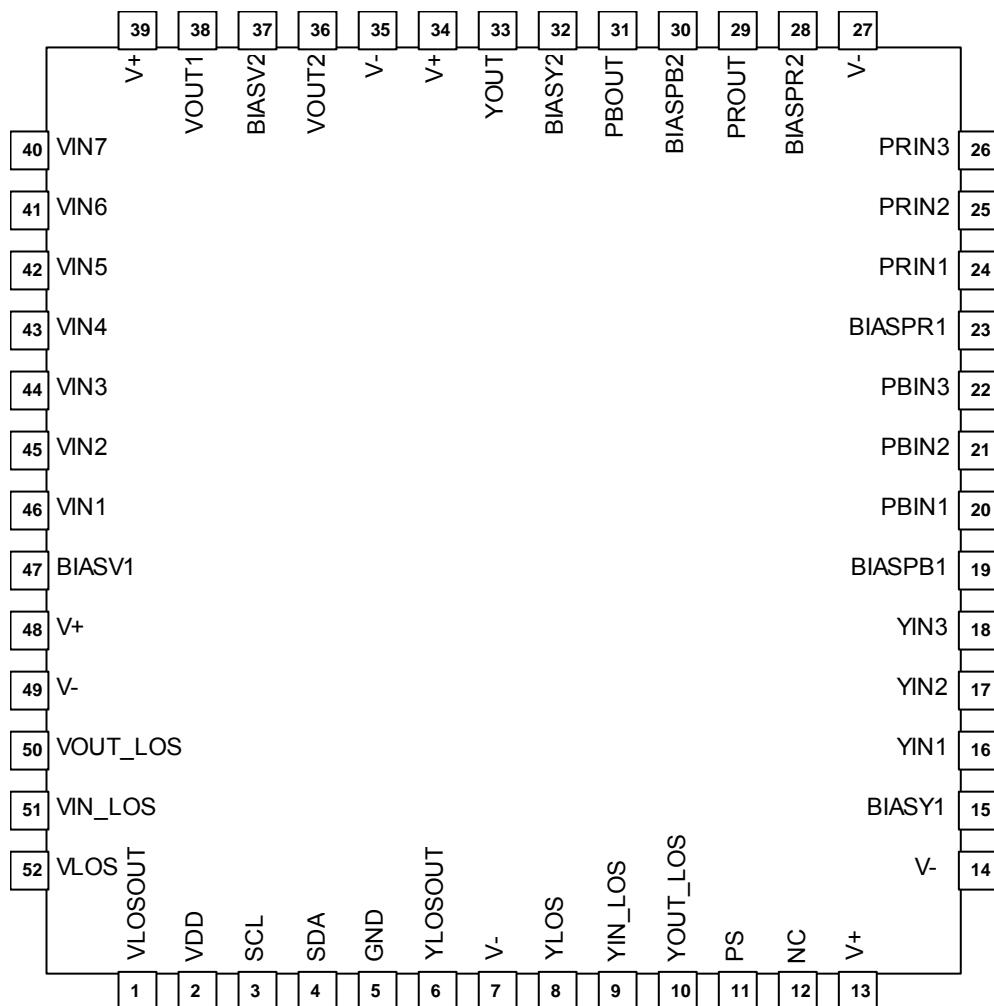

NJW1329FH3

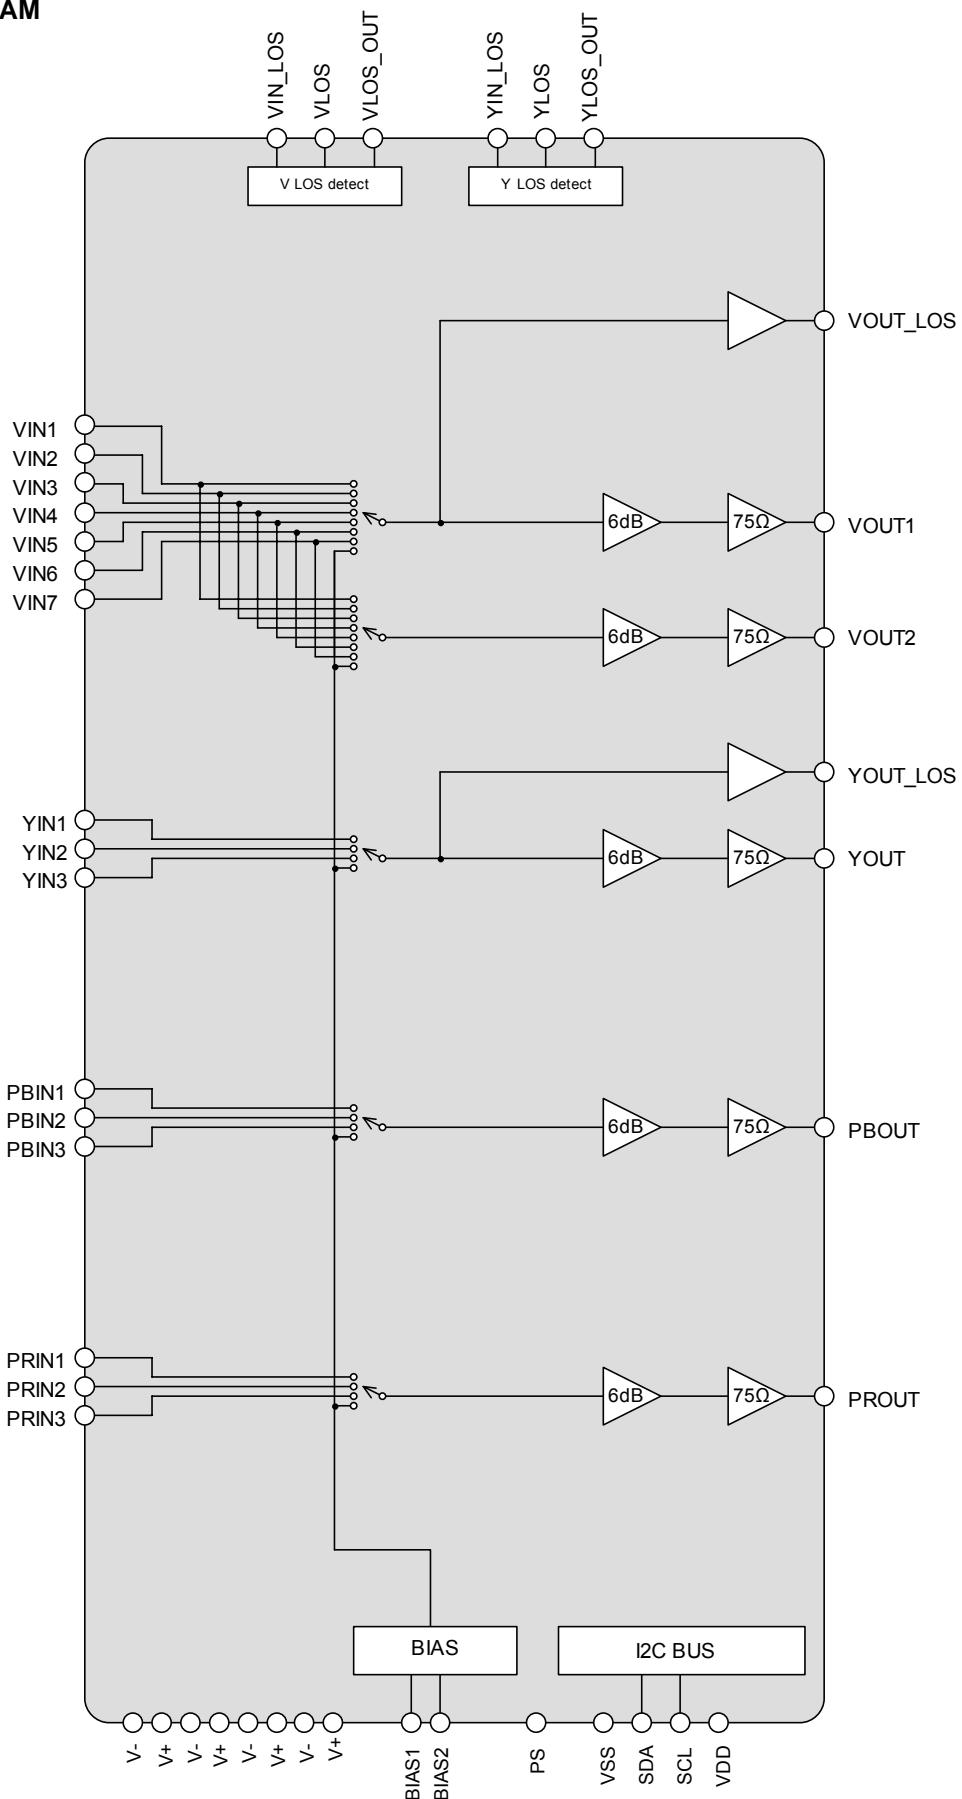

### ■ FEATURES

- Operating Voltage Dual Supply V+ +3.0 to +3.45V, V- -3.0 to -5.5V
- 7-input 2 channel video switch for CVBS
- 3-input 1 channel video switch for Component Video Signal
- 2 channel 75-ohm driver for CVBS
- 1 channel 75-ohm driver for Component Video Signal
- 1 channel LOS (Loss Of Signal) detector for each CVBS and Component Video Signal
- I<sup>2</sup>C BUS control
- LQFP52-H3

### ■ PIN CONFIGURATION

## ■ BLOCK DIAGRAM

**■ ABSOLUTE MAXIMUM RATINGS**

(Ta=25°C)

| PARAMETER                   | SYMBOL         | RATINGS               | UNIT |
|-----------------------------|----------------|-----------------------|------|
| Supply Voltage              | V <sup>+</sup> | 3.5                   | V    |
| Supply Voltage              | V <sup>-</sup> | -6.0                  | V    |
| Power Dissipation           | Pd             | 1800 <sup>NOTE)</sup> | mW   |
| Operating Temperature Range | Topr           | -20 to +75            | °C   |
| Storage Temperature Range   | Tstr           | -40 to +125           | °C   |

(Note) At on a board of EIA/JDAC specification. ( 114.3 x 76.2 x 1.6mm Two layers,FR-4)

**■ RECOMMEND OPERATING VOLTAGE**

(Ta=25°C)

| PARAMETER           | SYMBOL | TEST CONDITION       | MIN. | TYP. | MAX. | UNIT |
|---------------------|--------|----------------------|------|------|------|------|
| Operating Voltage 1 | Vopr1  | V <sup>+</sup> - GND | 3.0  | 3.3  | 3.45 | V    |
| Operating Voltage 2 | Vopr2  | V <sup>-</sup> - GND | -5.5 | -3.3 | -3.0 | V    |

**■ ELECTRICAL CHARACTERISTICS****● Power Supply Characteristics**(TEST CONDITION: Ta=25°C, V<sup>+</sup> = 3.3V, VDD= 0V, V<sup>-</sup> = -5.0V VSS= -5.0V all controls unless otherwise specified)**● DC CHARACTERISTICS**

# NJW1329

---

## • AC CHARACTERISTICS

| PARAMETER                            | SYMBOL | TEST CONDITION | MIN. | TYP. | MAX.           | UNIT |
|--------------------------------------|--------|----------------|------|------|----------------|------|
| Switch Change Over Voltage (H level) | VthH   |                | 2.0  | -    | V <sup>+</sup> | V    |
| Switch Change Over Voltage (L level) | VthL   |                | 0    | -    | 1.0            | V    |
| Maximum inflow current on Switch ON  | IthH   | V=3.3V         | -    | -    | 120            | uA   |
| Maximum inflow current on Switch OFF | IthL   | V=0.3V         | -    | -    | 8              | uA   |

## ■ POWER SAVE CONTROL

NJW1329 performs Power Save mode with PS terminal.

| PS TERMINAL VOLTAGE | OPERATION  |
|---------------------|--|
| <VthL               | Power Save Mode, enable I2C control for Power Save |
| >VthH               | Normal Mode, disenable I2C control for Power Save  |

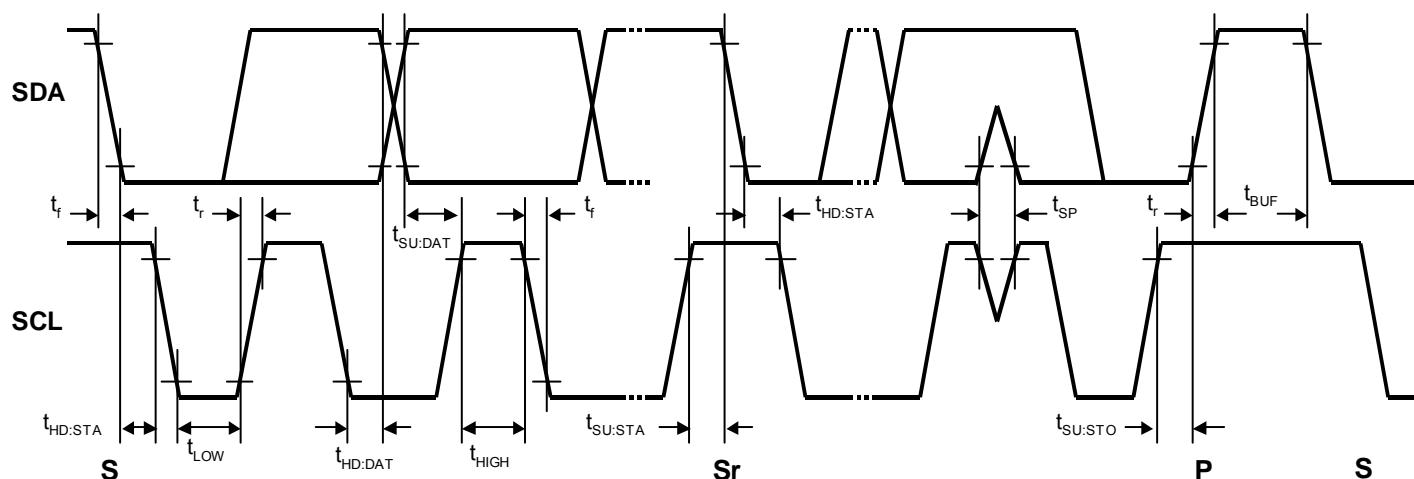

## ■ SIGNAL DETECTION

NJW1329 detects a signal that is larger than Signal Detective Voltage (SDV).

| INPUT SIGNAL VOLTAGE   | LOS_OUT | CONDITION                  |
|------------------------|---------|----------------------------|
| Vdet > V <sub>IN</sub> | H       | Signal is smaller than SDV |
| Vdet < V <sub>IN</sub> | L       | Signal is larger than SDV  |

NOTE) If you input a signal except for video signal with sync, there is the case that output of LOS\_OUT terminal is not stable.

| Fall time of both SDA and SCL signals            | t <sub>f</sub>      | -             | -    | 300  | -               | -    | 300  | ns   |
| Set-up time for STOP condition                   | t <sub>SU:STO</sub> | 4.0           | -    | -    | 0.6             | -    | -    | μs   |
| Bus free time between a STOP and START condition | t <sub>BUF</sub>    | 4.7           | -    | -    | 1.3             | -    | -    | μs   |
| Capacitive load for each bus line                | C <sub>b</sub>      | -             | -    | 400  | -               | -    | 400  | pF   |
| Noise margin at the Low level                    | V <sub>nL</sub>     | 0.5           | -    | -    | 0.5             | -    | -    | V    |
| Noise margin at the High level                   | V <sub>nH</sub>     | 1             | -    | -    | 1               | -    | -    | V    |

C<sub>b</sub> ; total capacitance of one bus line in pF

NOTE) Data hold time: t<sub>HD:DAT</sub>

Please hold the Data Hold Time (t<sub>HD:DAT</sub>) to 300ns or more to avoid status of unstable at SCL falling edge.

### ■ DEFINITION OF I<sup>2</sup>C REGISTER

You can send and transmit address by I<sup>2</sup>C REGISTER with SDA input and SCL input.

#### • I<sup>2</sup>C BUS FORMAT

|      | MSB           | LSB  | MSB            | LSB  | MSB  | LSB  | A    | P |
|------|---------------|------|----------------|------|------|------|------|---|
| S    | Slave Address | A    | Select Address | A    | Data | A    |      |   |
| 1bit | 8bit          | 1bit | 8bit           | 1bit | 8bit | 1bit | 1bit |   |

S: Starting term

## ■ APPLICATION NOTE

Please input the recommendation voltage on each power supply terminal.

When impressing the voltage of the recommendation outside, there is a possibility to destroying by latch up of the inner device.

When not making IC move, please use a power save mode. Or please don't input the voltage on any power supply terminals.

### •Power supply sequence

When input V- (-5V) first, V+ (3.3V) power supply terminal will be the negative voltage. There is a possibility that a regulator of V+ power supply doesn't move in that case.

When V-power supply is impressed at the state that a regulator of V+ power supply doesn't move, an excessive electric current flows to IC. And the worst in case of is destroyed.

Please input V+ power supply and V- power supply at the same time. Or please input V+ power supply first.

Please turn off V-power supply first at the time at power supply off. Or please turn off V+ power supply and V- power supply at the same time.

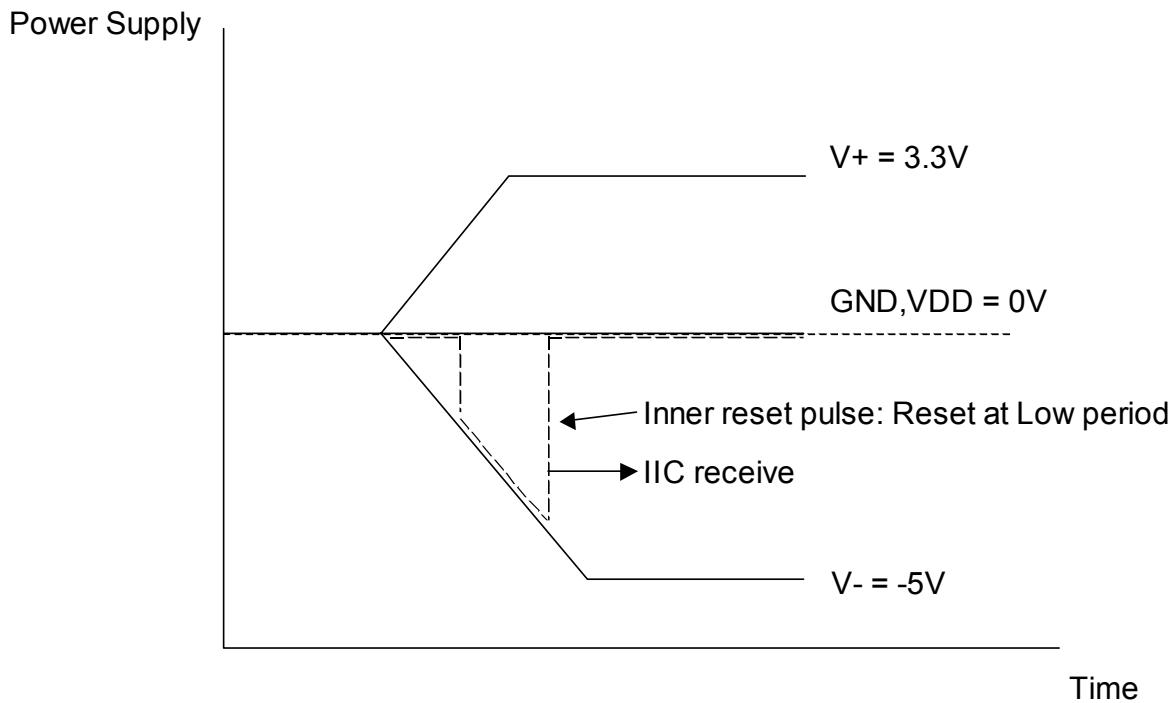

After the inner reset pulse stood up in High from Low, please do the timing to which IIC is sent. (Figure 1 referring)

The inner reset pulse is when V- terminal was about -2.5V in ambient temperature at time to stand up in High from Low.

Therefore time of the reset pulse is proportional to the rising rate of the V- power supply.

The above fluctuates by variability of the temperature and variability of a device.

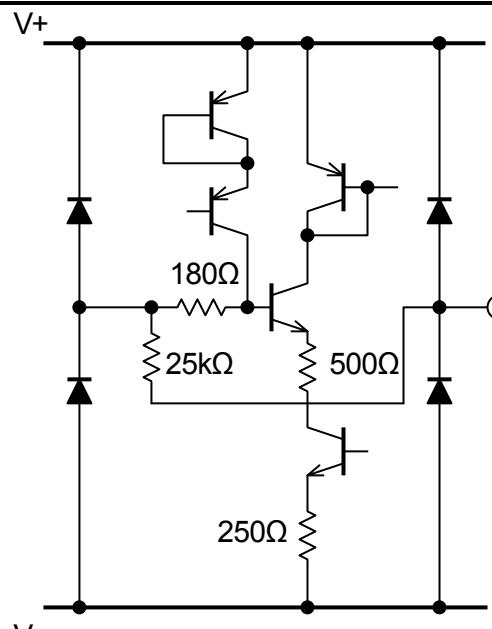

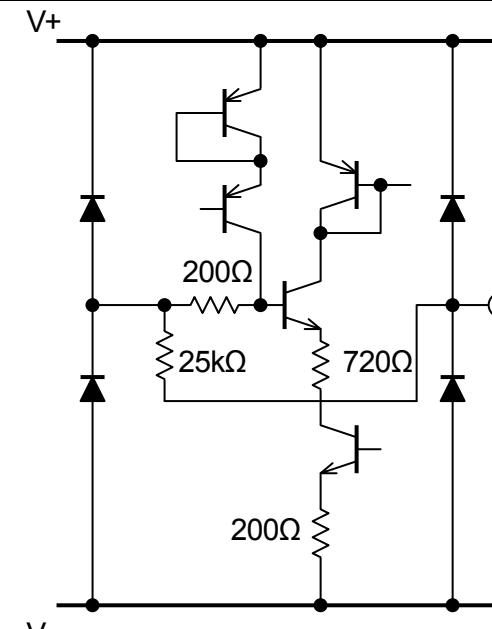

Therefore please send IIC after it'll be by V- power supply less than -3.0 V.

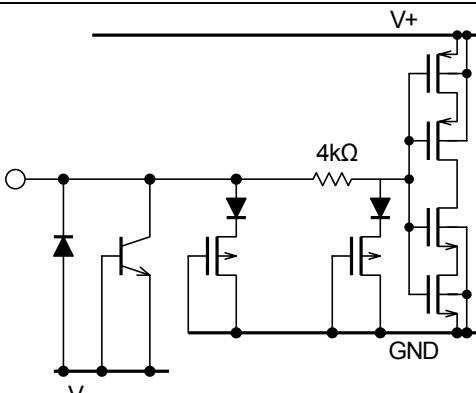

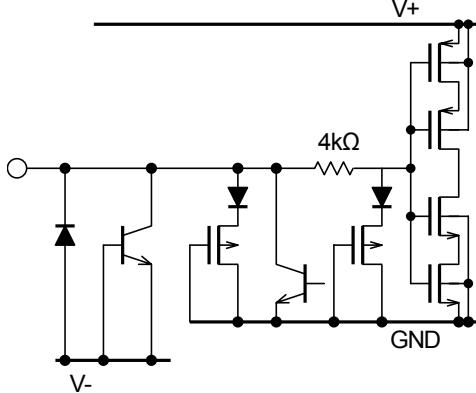

(Figure 1)

## ■ TERMINAL DESCRIPTION

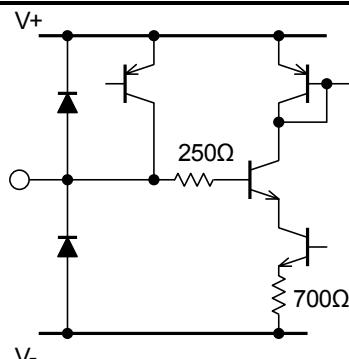

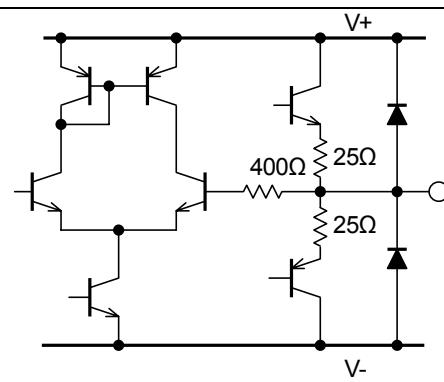

| No. | SYMBOL | FUNCTION                  | EQUIVALENT CIRCUIT | VOLATGE |
