Please confirm the sales representative before  
starting to design your system.**

## INTRODUCTION

The Copyright to this document belongs to NEC LCD Technologies, Ltd. (hereinafter called "NEC"). No part of this document will be used, reproduced or copied without prior written consent of NEC.

NEC does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NEC.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NEC, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "**Standard**", "**Special**", and "**Specific**" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NEC sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NEC standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NEC quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "**Standard**" unless otherwise specified in this document.

## 1. OUTLINE

### 1.1 STRUCTURE AND PRINCIPLE

Monochrome LCD module NL204153BM21-01 and NL204153BM21-01A are composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a monochrome-filter glass substrate.

Grayscale data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Monochrome images are created by regulating the amount of transmitted light through the TFT array.

### 1.2 APPLICATION

- Monochrome monitor system

### 1.3 FEATURES

- Ultra-wide viewing angle (Adoption of Super - Advanced Super Fine TFT (SA-SFT))
- High luminance
- High contrast
- Low reflection
- High resolution
- 256 gray scales per 1 sub-pixel
- LVDS interface
- Adjustable gamma characteristics by using built-in 10-bit LUT (look up table)
- Selectable LVDS data input map
- Small foot print
- Incorporated edge light type backlight (without inverter)
- Replaceable backlight
- Differences between NL204153BM21-01 and NL204153BM21-01A

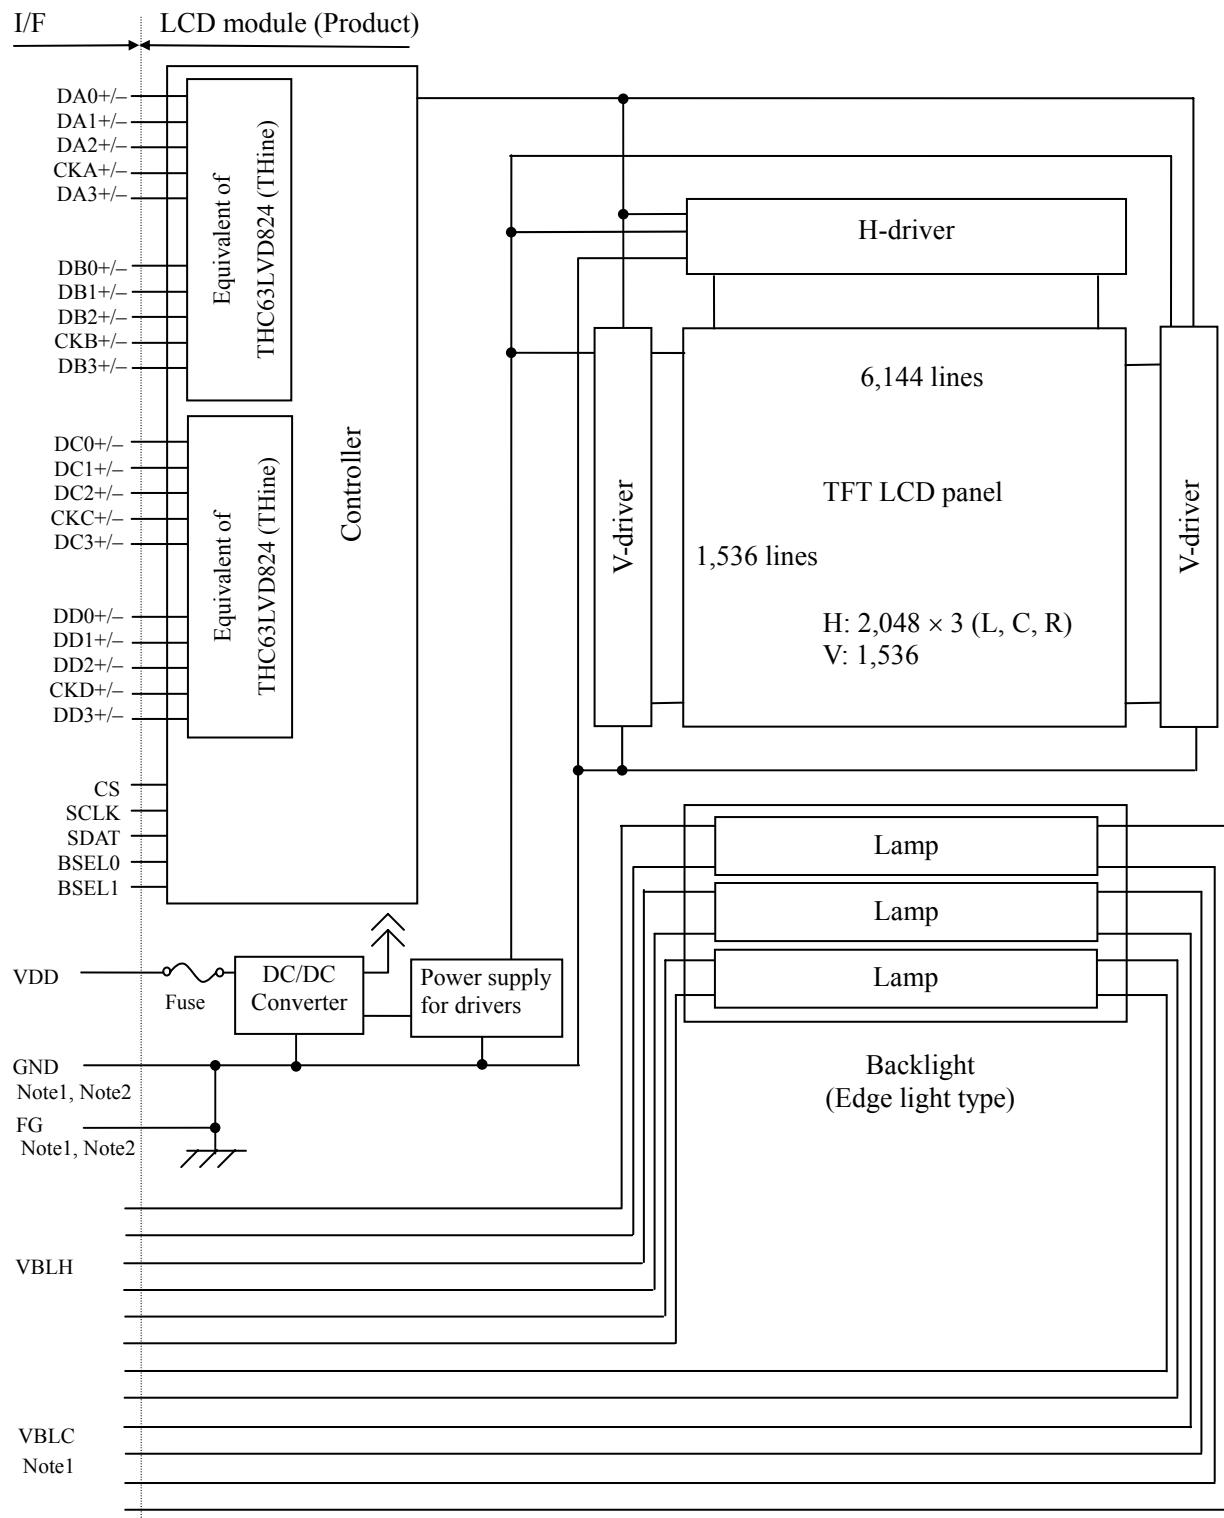

| Item                                 | NL204153BM21-01                | NL204153BM21-01A               |
|--------------------------------------|--------------------------------|--------------------------------|
| White chromaticity                   | Wx, Wy = (0.255, 0.310) (typ.) | Wx, Wy = (0.280, 0.304) (typ.) |
| Luminance                            | 700cd/m <sup>2</sup> (min.)    | 650cd/m <sup>2</sup> (min.)    |
| Backlight unit<br>(Replaceable part) | 213LHS06                       | 213LHS11                       |
| Cable color of backlight lamps       | See "4.5.2 Backlight lamp".    |                                |

## 2. GENERAL SPECIFICATIONS

|                                   |  |                                |
|-----------------------------------|--|--------------------------------|
| <b>Display area</b>               | 433.152 (H) × 324.864 (V) mm   |                                |
| <b>Diagonal size of display</b>   | 54 cm (21.3 inches)  |                                |
| <b>Drive system</b>               | a-Si TFT active matrix   |                                |
| <b>Display grayscale</b>          | 256 gray scales per 1 sub-pixel (8-bit)<br>(766 gray scales per 1 pixel)   |                                |
| <b>Pixel</b>                      | 2,048 (H) × 1,536 (V) pixels (1 pixel consists of 3 sub-pixels (LCR).)   |                                |
| <b>Pixel arrangement</b>          | LCR vertical stripe  |                                |
| <b>Sub-pixel pitch</b>            | 0.0705 (H) × 0.2115 (V) mm   |                                |
| <b>Pixel pitch</b>                | 0.2115 (H) × 0.2115 (V) mm   |                                |
| <b>Module size</b>                | 457.0 (W) × 350.0 (H) × 25.0 (D) mm (typ.)   |                                |
| <b>Weight</b>                     | 3,800 g (typ.)   |                                |
| <b>Contrast ratio</b>             | 700:1 (typ.)   |                                |
| <b>Viewing angle</b>              | <p><i>At the contrast ratio ≥ 10:1</i></p> <ul style="list-style-type: none"> <li>Horizontal: Right side 85° (typ.), Left side 85° (typ.)</li> <li>Vertical: Up side 85° (typ.), Down side 85° (typ.)</li> </ul>   |                                |
| <b>Designed viewing direction</b> | Viewing angle with optimum grayscale ( $\gamma$ =DICOM): Normal axis (perpendicular) Note1   |                                |
| <b>Polarizer surface</b>          | Antiglare  |                                |
| <b>Polarizer pencil-hardness</b>  | 2H (min.) [by JIS K5400]   |                                |
| <b>Response time</b>              | $T_{on} + T_{off}$ (10% $\rightarrow$ 90%)<br>35 ms (typ.)   |                                |
| <b>Luminance</b>                  | <p><i>At IBL= 6.0mArms / lamp</i></p> 800 cd/m <sup>2</sup> (typ.)   |                                |
| <b>White chromaticity</b>         | NL204153BM21-01  | Wx, Wy = (0.255, 0.310) (typ.) |
|                                   | NL204153BM21-01A   | Wx, Wy = (0.280, 0.304) (typ.) |
| <b>Signal system</b>              | 4 ports LVDS interface (THC63LVD824×2 pcs, THine Electronics, Inc. or equivalent)<br>[LCR 8-bit signals, Data enable signal (DE), Dot clock (CLK)]   |                                |
| <b>Power supply voltage</b>       | LCD panel signal processing board: 12.0V   |                                |
| <b>Backlight</b>                  | Edge light type: 6 cold cathode fluorescent lamps (without inverter) <div style="margin-left: 20px;"> <p>Replaceable part</p> <ul style="list-style-type: none"> <li>Backlight unit: Type No. 213LHS06 for NL204153BM21-01<br/>213LHS11 for NL204153BM21-01A</li> </ul> </div> |                                |
| <b>Power consumption</b>          | <p><i>At IBL= 6.0mArms/lamp, Checkered flag pattern</i></p> 34.2 W (typ., Power dissipation of the inverter is not included.)  |                                |

Note1: When the product luminance is 800cd/m<sup>2</sup>, the gamma characteristic is designed to  $\gamma$ =DICOM.

### 3. BLOCK DIAGRAM

Note1: Connections between GND (Signal ground), FG (Frame ground) and VBLC (Lamp low voltage terminal) in the LCD module

|            |               |
|------------|---------------|
| GND - FG   | Connected     |
| GND - VBLC | Not connected |
| FG - VBLC  | Not connected |

Note2: GND and FG must be connected to customer equipment's ground, and it is recommended that GND, FG and customer inverter ground are connected together in customer equipment.

#### 4. DETAILED SPECIFICATIONS

##### 4.1 MECHANICAL SPECIFICATIONS

| Parameter    | Specification                                      | Unit         |
|--------------|--|--------------|
| Module size  | 457.0 ± 0.5 (W) × 350.0 ± 0.5 (H) × 25.0 ± 0.5 (D) | Note1, Note2 |
| Display area | 433.152 (H) × 324.864 (V)                          | Note2        |
| Weight       | 3,800 (typ.), 4,000 (max.)                         | g            |

Note1: Excluding warpage of the signal processing board cover and the connection board cover.

Note2: See "7. OUTLINE DRAWINGS".

##### 4.2 ABSOLUTE MAXIMUM RATINGS

| Parameter                     | Symbol | Rating        | Unit | Remarks                |
|-------------------------------|--------|---------------|------|------------------------|
| Power supply voltage          | VDD    | -0.3 to +14.0 | V    | Ta = 25°C              |
|                               | VBLH   | 2,000         | Vrms |                        |

## 4.3.2 Backlight lamp

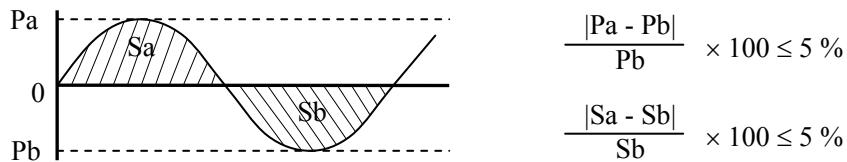

(Ta=25°C, Note1)

| Parameter                  | Symbol | min.  | typ. | max. | Unit  | Remarks   |
|----------------------------|--------|-------|------|------|-------|---|
| Lamp current               | IBL    | 3.0   | 6.0  | 7.0  | mArms | at IBL= 6.0mArms:<br>800 cd/m <sup>2</sup><br>Note3 |
| Lamp voltage               | VBLH   | -     | 750  | -    | Vrms  | Note2, Note3  |
| Lamp starting voltage      | VS     | 1,220 | -    | -    | Vrms  | Ta = 25°C<br>Note2, Note3                           |
|                            |        | 1,460 | -    | -    | Vrms  | Ta = 0°C<br>Note2, Note3                            |
| Lamp oscillation frequency | FO     | 50    | 58   | 60   | kHz   | Note4   |

Note1: This product consists of 6 backlight lamps, and these specifications are for each lamp.

Note2: The lamp voltage cycle between lamps should be kept on a same phase. "VS" and "VBLH" are the voltage value between low voltage side (Cold) and high voltage side (Hot).

Note3: The asymmetric ratio of working waveform for lamps (Lamp voltage peak ratio, Lamp current peak ratio and waveform space ratio) should be less than 5 % (See the following figure.). If the waveform is asymmetric, DC (Direct current) element apply into the lamp. In this case, a lamp lifetime may be shortened, because a distribution of a lamp enclosure substance inclines toward one side between low voltage terminal (Cold terminal) and high voltage terminal (Hot terminal). When designing the inverter, evaluate asymmetric of lamp working waveform sufficiently.

Pa: Supply voltage/current peak for positive, Pb: Supply voltage/current peak for negative  
 Sa: Waveform space for positive part, Sb: Waveform space for negative part.

Note4: A beat noise by interference of "FO" and "1/th" may appear on the screen. (th: Horizontal cycle (See "**4.8.1 Timing characteristics**".)) Set up the "FO" so that the beat noise does not appear.

Note5: Method of lamp cable installation may invite fluctuation of lamp current and voltage or asymmetric of lamp working waveform. When designing method of lamp cable installation, evaluate the fluctuation of lamp current, voltage and working waveform sufficiently.

#### 4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

| Power supply voltage | Ripple voltage<br>(Measure at input terminal of power supply) | Note1 | Unit  |
|----------------------|---|-------|-------|
| VDD                  | 12.0 V  | ≤ 100 | mVp-p |

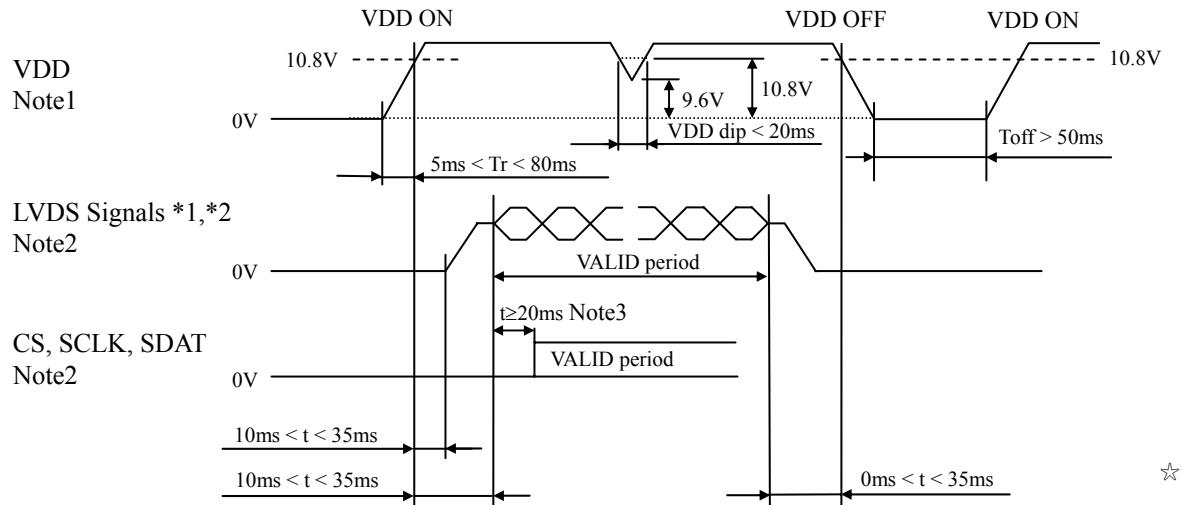

Note1: The permissible ripple voltage includes spike noise.

#### 4.3.4 Fuse

| Parameter | Fuse       |                              | Rating        | Fusing current    | Remarks |
|-----------|------------|------------------------------|---------------|-------------------|---------|
|           | Type       | Supplier                     |               |                   |         |
| VDD       | FCC16202AB | KAMAYA ELECTRIC<br>Co., Ltd. | 2.0 A<br>32 V | 4.0 A,<br>5s max. | Note1   |

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

## 4.4 POWER SUPPLY VOLTAGE SEQUENCE

\*1: DA0+/-, DA1+/-, DA2+/-, DA3+/-, CKA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/-, CKB+/-, DC0+/-, DC1+/-, DC2+/-, DC3+/-, CKC+/-, DD0+/-, DD1+/-, DD2+/-, DD3+/-, CKD+/-

\*2: LVDS signals should be measured at the terminal of  $100\Omega$  resistance.

Note1: In terms of voltage variation (voltage drop) while VDD rising edge is below 10.8V, a protection circuit may work, and then this product may not work.

Note2: LVDS signals and CS, SCLK, SDAT must be Low or High-impedance, exclude the VALID period (See above sequence diagram), in order to avoid that internal circuits is damaged.

If some of signals are cut while this product is working, even if the signal input to it once again, it might not work normally. VDD should be cut when the display and function signals are stopped.

Note3: At the beginning of the serial communication mode, take 20ms or more after the LVDS signal input. When writing the LUT data, see “**4.12 TEN-bit LOOK UP TABLE FOR GAMMA ADJUSTMENT**”.

Note4: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

## 4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

## 4.5.1 LCD panel signal processing board

CN1 socket (LCD module side): FI-WE41P-HFE (Japan Aviation Electronics Industry Limited (JAE))  
 Adaptable plug: FI-W41S (Japan Aviation Electronics Industry Limited (JAE))

Note1: High must be Open.

Note2: Twist pair wires with 100Ω (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter. ☆

Note3: Input signal RSVD is not used inside the product, but do not keep this pin open to avoid noise problem. ☆

#### 4.7 DISPLAY GRAY SCALE AND INPUT DATA SIGNALS

This product can display 256 gray scales in each LCR sub-pixel and 766 gray scales per 1 pixel. Also the relation between display gray scale and input data signals is as the following table.

| Display gray scale          |        | Data signal (0: Low level, 1: High level) |   |   |   |   |   |   |   |                                 |   |   |   |   |   |   |   |                                 |   |   |   |   |   |   |   |   |
|-----------------------------|--------|---|---|---|---|---|---|---|---|---------------------------------|---|---|---|---|---|---|---|---------------------------------|---|---|---|---|---|---|---|---|

|                    |                      | Hold time            | -                                       |   |                 |               | ns<br>-                  |
|                    | Rise time, Fall time |                      | -                                       |   |                 |               | ns<br>-                  |
|                    | CLK-DATA             | Setup time           | -                                       |   |                 |               | ns<br>-                  |
|                    |                      | Hold time            | -                                       |   |                 |               | ns<br>-                  |
|                    |                      | Rise time, Fall time | -                                       |   |                 |               | ns<br>-                  |

Note1: The sum of jitter and skew of horizontal period should be within  $\pm 1$  CLK.

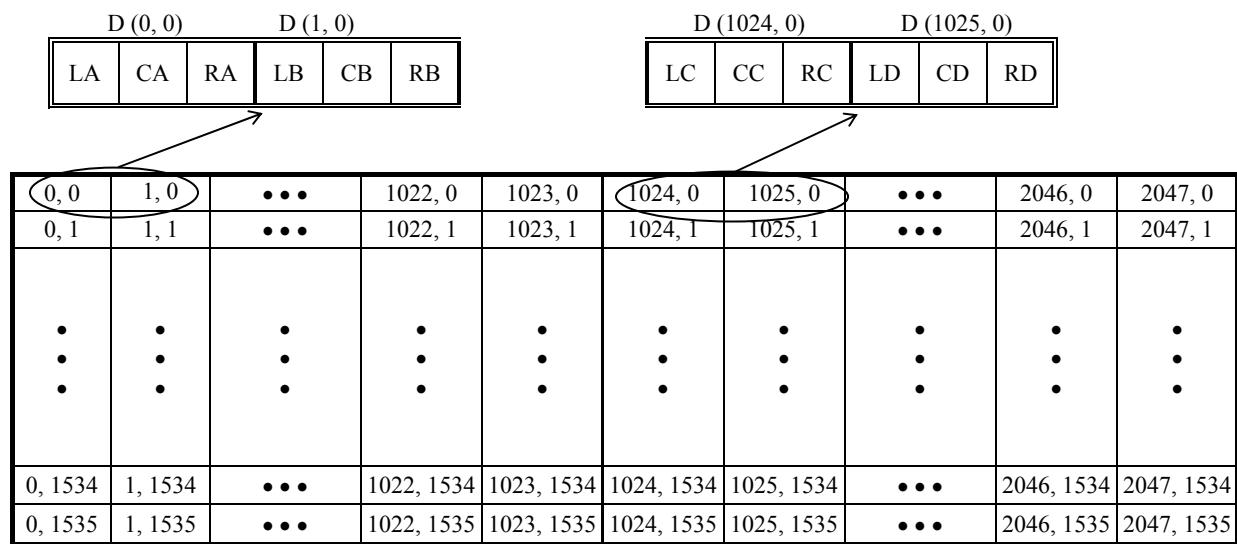

### 4.8.2 Input signal timing chart

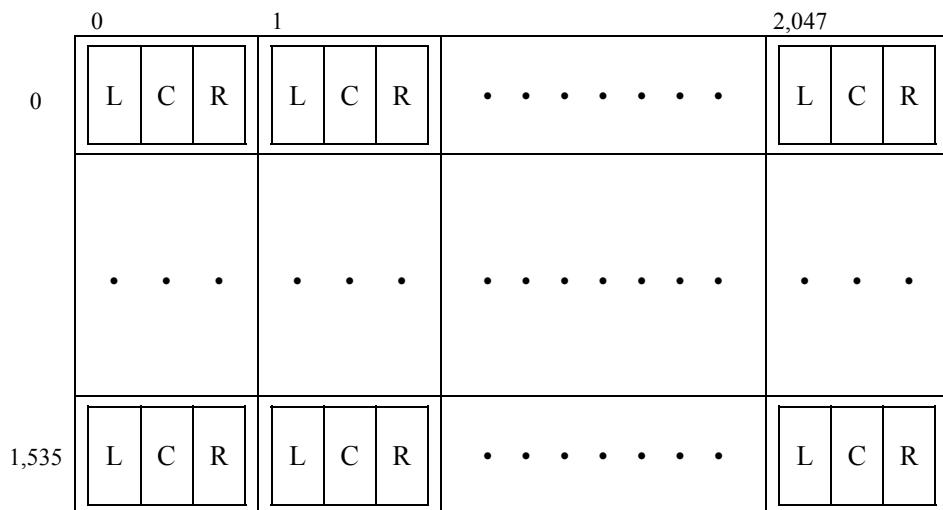

#### 4.9 LVDS DATA TRANSMISSION METHOD

#### 4.10 DISPLAY POSITIONS

## 4.11 PIXEL ARRANGEMENT

#### 4.12 TEN-bit LOOK UP TABLE FOR GAMMA ADJUSTMENT

Adjustment of gamma characteristics for each 8-bit LCR data is possible by using built-in 10-bit LUT (look up table) for Gamma characteristics.

The LUT is set with the serial data. The combination of the control command determines Random/Sequential Address WRITE and Individual/Simultaneous LCR setting.

The serial data is composed as Table1.

Table1: Serial data Composition

| DATA | DATA name | Function          | Remarks           |
|------|-----------|-------------------|-------------------|
| D31  | CMD5      | Control Command   | See Table2 and 3. |
| D30  | CMD4      | Control Command   |                   |
| D29  | CMD3      | Control Command   |                   |
| D28  | CMD2      | Control Command   |                   |
| D27  | CMD1      | Control Command   |                   |
| D26  | CMD0      | Control Command   |                   |

| DATA2  | GAM2      | [MSB]     |             |
| DATA1  | GAM1      | GMA Data  | See Table7. |
| DATA0  | GAM0      | [LSB]     |             |

Table7: Control code GAM[2:0]

| GMA2 | GMA1 | GMA0 | Function                                    |
|------|------|------|---|
| 0    | 0    | 0    | No correction (Initial setting)             |
| 0    | 0    | 1    | Correction according to the LUT Data. Note1 |

\*Other combinations are prohibited, and may cause function error.

Note1: Initial setting of the LUT is undefined data. The LUT should be enabled by setting of the GMA after writing the LUT data in all the 256 addresses, in order to avoid undefined data display.

Note2: Transfer the data every power-on, because the LUT data isn't stored in the LCD module.

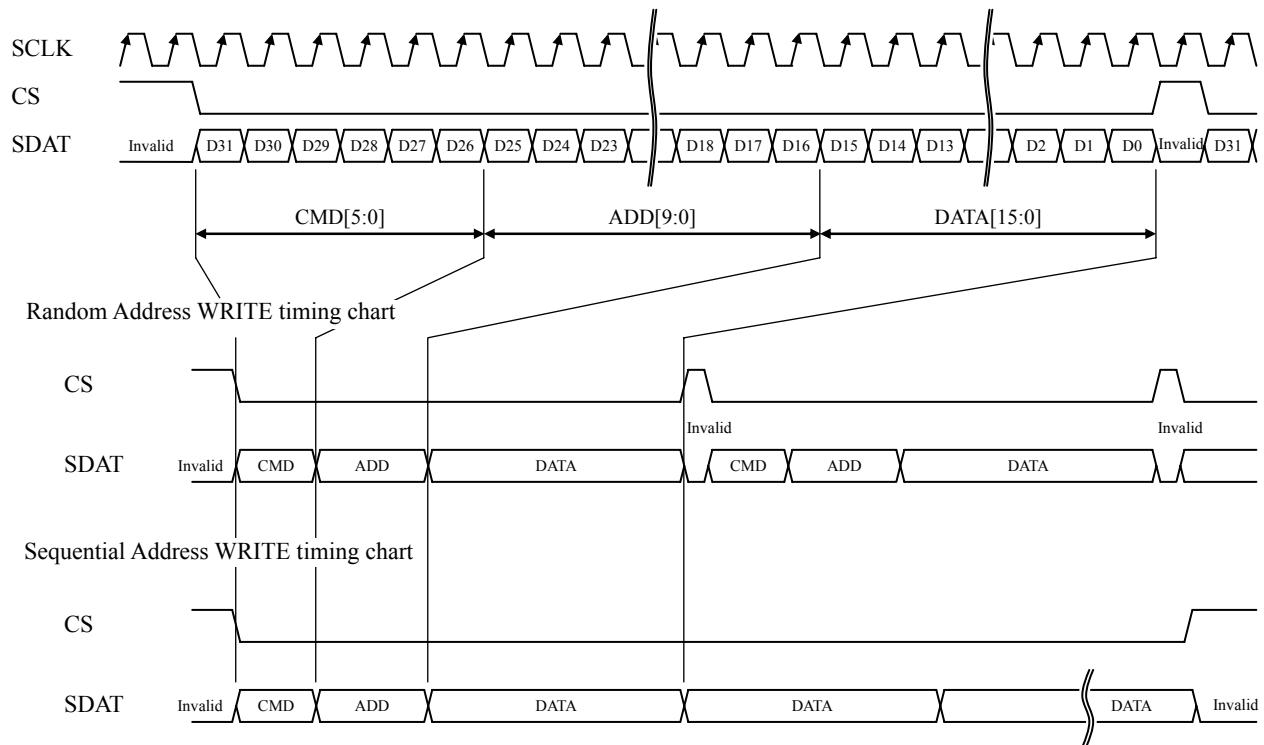

Note3: As writing and reading the LUT data, a noise may appear on the display image. In order to prevent the noise appearing on the display, following measures should be performed.

- (1)The LUT data should be rewritten during invalid period of pixel data (See "4.8 INPUT SIGNAL TIMINGS").
- (2) The LUT data should be rewritten when the Gamma Correction is OFF (GMA[2:0] = 000).

| SDAT-SCLK Setup Time | Tds    | 50   | -    | -    | ns   | -       |
| SDAT-SCLK Hold Time  | Tdh    | 50   | -    | -    | ns   | -       |
| CS-SCLK Setup Time   | Tcs    | 50   | -    | -    | ns   | -       |
| CS-SCLK Hold Time    | Tch    | 50   | -    | -    | ns   | -       |

Note1: During the serial communication mode, the display noise may appear because of rewriting the data. To avoid this, rewrite the LUT data when the pixel data is invalid or the Gamma Correction is OFF (GMA[2:0] = 000). The external noise may cause the data change, refresh the data regularly according to need.

## 4.14 OPTICS

### 4.14.1 Optical characteristics

(1)NL204153BM21-01

(Note1, Note2)

| Parameter            |       | Condition   | Symbol     | min. | typ.  | max. | Unit              | Measuring instrument | Remarks        |

|                      |       | White to Black  | Toff       | -    | 18    | 25   | ms                |                      |                |
| Viewing angle        | Right | $\theta U = 0^\circ, \theta D = 0^\circ, CR \geq 10$  | $\theta R$ | 70   | 85    | -    | $^\circ$          | BM-5A                | Note8          |
|                      | Left  | $\theta U = 0^\circ, \theta D = 0^\circ, CR \geq 10$  | $\theta L$ | 70   | 85    | -    | $^\circ$          |                      |                |
|                      | Up    | $\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$  | $\theta U$ | 70   | 85    | -    | $^\circ$          |                      |                |
|                      | Down  | $\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$  | $\theta D$ | 70   | 85    | -    | $^\circ$          |                      |                |

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

T<sub>a</sub> = 25°C, V<sub>DD</sub> = 12.0V, I<sub>BL</sub> = 6.0mA/rms/lamp, Display mode: QXGA,  
Horizontal cycle = 1/96.72kHz, Vertical cycle = 1/60.0Hz

Optical characteristics are measured after 20 minutes from working the product, in the dark room. Also measurement methods are as follows.

Note3: See "**4.14.2 Definition of contrast ratio**".

Note4: See "**4.14.3 Definition of luminance uniformity**".

Note5: These coordinates are found on CIE 1931 chromaticity diagram.

Note6: Product surface temperature: TopF = 35 °C

Note7: See "**4.14.4 Definition of response times**".

Note8: See "**4.14.5 Definition of viewing angles**".

#### 4.14.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

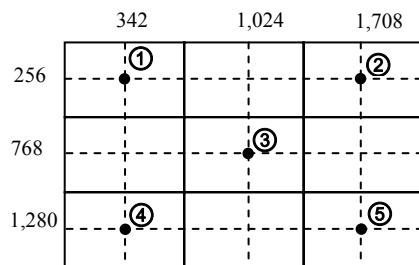

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance of white screen}}{\text{Luminance of black screen}}$$

#### 4.14.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

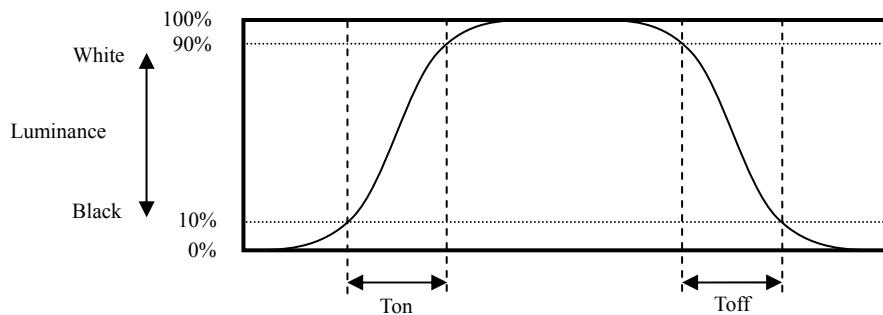

$$\text{Luminance uniformity (LU)} = \frac{\text{Maximum luminance from } \textcircled{1} \text{ to } \textcircled{5}}{\text{Minimum luminance from } \textcircled{1} \text{ to } \textcircled{5}}$$

The luminance is measured at near the 5 points shown below.

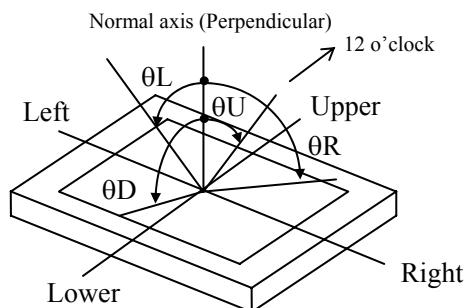

#### 4.14.4 Definition of response times

Response time is measured, the luminance changes from "black" to "white", or "white" to "black" on the same screen point, by photo-detector. Ton is the time it takes the luminance change from 10% up to 90%. Also Toff is the time it takes the luminance change from 90% down to 10% (See the following diagram.).

#### 4.14.5 Definition of viewing angles

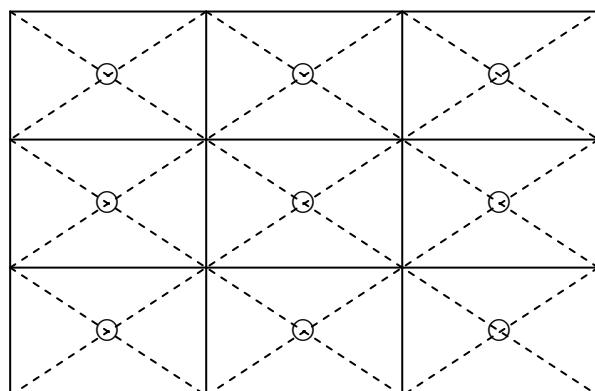

## 5. RELIABILITY TESTS

| Test item                                    | Condition   | Judgment Note1  |
|--|---|---|
| High temperature and humidity<br>(Operation) | ① $60 \pm 2^\circ\text{C}$ , RH = 60%, 240hours<br>② Display data is white.   |   |
| Heat cycle<br>(Operation)                    | ① $0 \pm 3^\circ\text{C} \dots 1\text{hour}$<br>$55 \pm 3^\circ\text{C} \dots 1\text{hour}$<br>② 50cycles, 4hours/cycle<br>③ Display data is white.                                     | No display malfunctions   |
| Thermal shock<br>(Non operation)             | ① $-20 \pm 3^\circ\text{C} \dots 30\text{minutes}$<br>$60 \pm 3^\circ\text{C} \dots 30\text{minutes}$<br>② 100cycles, 1hour/cycle<br>③ Temperature transition time is within 5 minutes. |   |
| Vibration<br>(Non operation)                 | ① 5 to 100Hz, $11.76\text{m/s}^2$<br>② 1 minute/cycle<br>③ X, Y, Z direction<br>④ 10 times each directions  | No display malfunctions<br>No physical damages  |
| Mechanical shock<br>(Non operation)          | ① $294\text{m/s}^2$ , 11ms<br>② X, Y, Z direction<br>③ 3 times each directions  |   |
| ESD<br>(Operation)                           | ① 150pF, $150\Omega$ , $\pm 10\text{kV}$<br>② 9 places on a panel surface Note2<br>③ 10 times each places at 1 sec interval   | No display malfunctions   |
| Dust<br>(Operation)                          | ① Sample dust: No.15 (by JIS-Z8901)<br>② 15 seconds stir<br>③ 8 times repeat at 1 hour interval   |   |
| Low pressure                                 | Non-operation   | ① 15 kPa (Equivalent to altitude 13,600m)<br>② $-20^\circ\text{C} \pm 3^\circ\text{C} \dots 24\text{ hours}$<br>③ $+60^\circ\text{C} \pm 3^\circ\text{C} \dots 24\text{ hours}$ |
|  | Operation   | ① 53.3 kPa (Equivalent to altitude 4,850m)<br>② $0^\circ\text{C} \pm 3^\circ\text{C} \dots 24\text{ hours}$<br>③ $+55^\circ\text{C} \pm 3^\circ\text{C} \dots 24\text{ hours}$  |

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points

## 6. PRECAUTIONS

### 6.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. **Be sure to read "6.2 CAUTIONS" and "6.3 ATTENTIONS", after understanding these contents!**

This sign has the meaning that customer will be injured by himself or the product will sustain a damage, if customer has wrong operations.

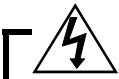

This sign has the meaning that customer will get an electrical shock, if customer has wrong operations.

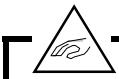

This sign has the meaning that customer will be injured by himself, if customer has wrong operations.

### 6.2 CAUTIONS

\* **Do not touch the working backlight. There is a danger of an electric shock.**

\* **Do not touch the working backlight. There is a danger of burn injury.**  
\* **Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: To be not greater  $294\text{m/s}^2$  and to be not greater 11ms, Pressure: To be not greater 19.6N ( $\phi 16\text{mm}$  jig))**

☆

### 6.3 ATTENTIONS

#### 6.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② Do not hook nor pull cables such as lamp cable, and so on, in order to avoid any damage.
- ③ When the product is put on the table temporarily, display surface must be placed downward.
- ④ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ⑤ The torque for product mounting screws must never exceed 0735 N·m. Higher torque might result in distortion of the bezel. And the length of product mounting screws must be  $\leq 5.3\text{mm}$ .
- ⑥ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ⑦ Do not press or rub on the sensitive product surface. When cleaning the product surface, use of the cloth with ethanolic liquid such as screen cleaner for LCD is recommended.

- ⑧ Do not push nor pull the interface connectors while the product is working.
- ⑨ Do not bend or unbend the lamp cable at the near part of the lamp holding rubber, to avoid the damage for high voltage side of the lamp.
- ⑩ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.

### 6.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurring by temperature difference, the product packing box should be opened after enough time being left under the environment of an unpacking room. Evaluate the leaving time sufficiently because a situation of dew condensation occurring is changed by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with packing state)
- ③ Do not operate in high magnetic field. Circuit boards may be broken down by it.
- ④ This product is not designed as radiation hardened.

### 6.3.3 Characteristics

**The following items are neither defects nor failures.**

- ① Response time, luminance and color may be changed by ambient temperature.
- ② Display mura, flicker, vertical seam or small spot may be observed depending on display patterns.
- ③ Optical characteristics (e.g. luminance, display uniformity, etc.) gradually is going to change depending on operating time, and especially low temperature, because the LCD has cold cathode fluorescent lamps.
- ④ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ⑤ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑥ Optical characteristics may be changed depending on input signal timings.
- ⑦ The interference noise between input signal frequency for this product's signal processing board and luminance control frequency of the inverter may appear on a display. Set up luminance control frequency of the inverter so that the interference noise does not appear.

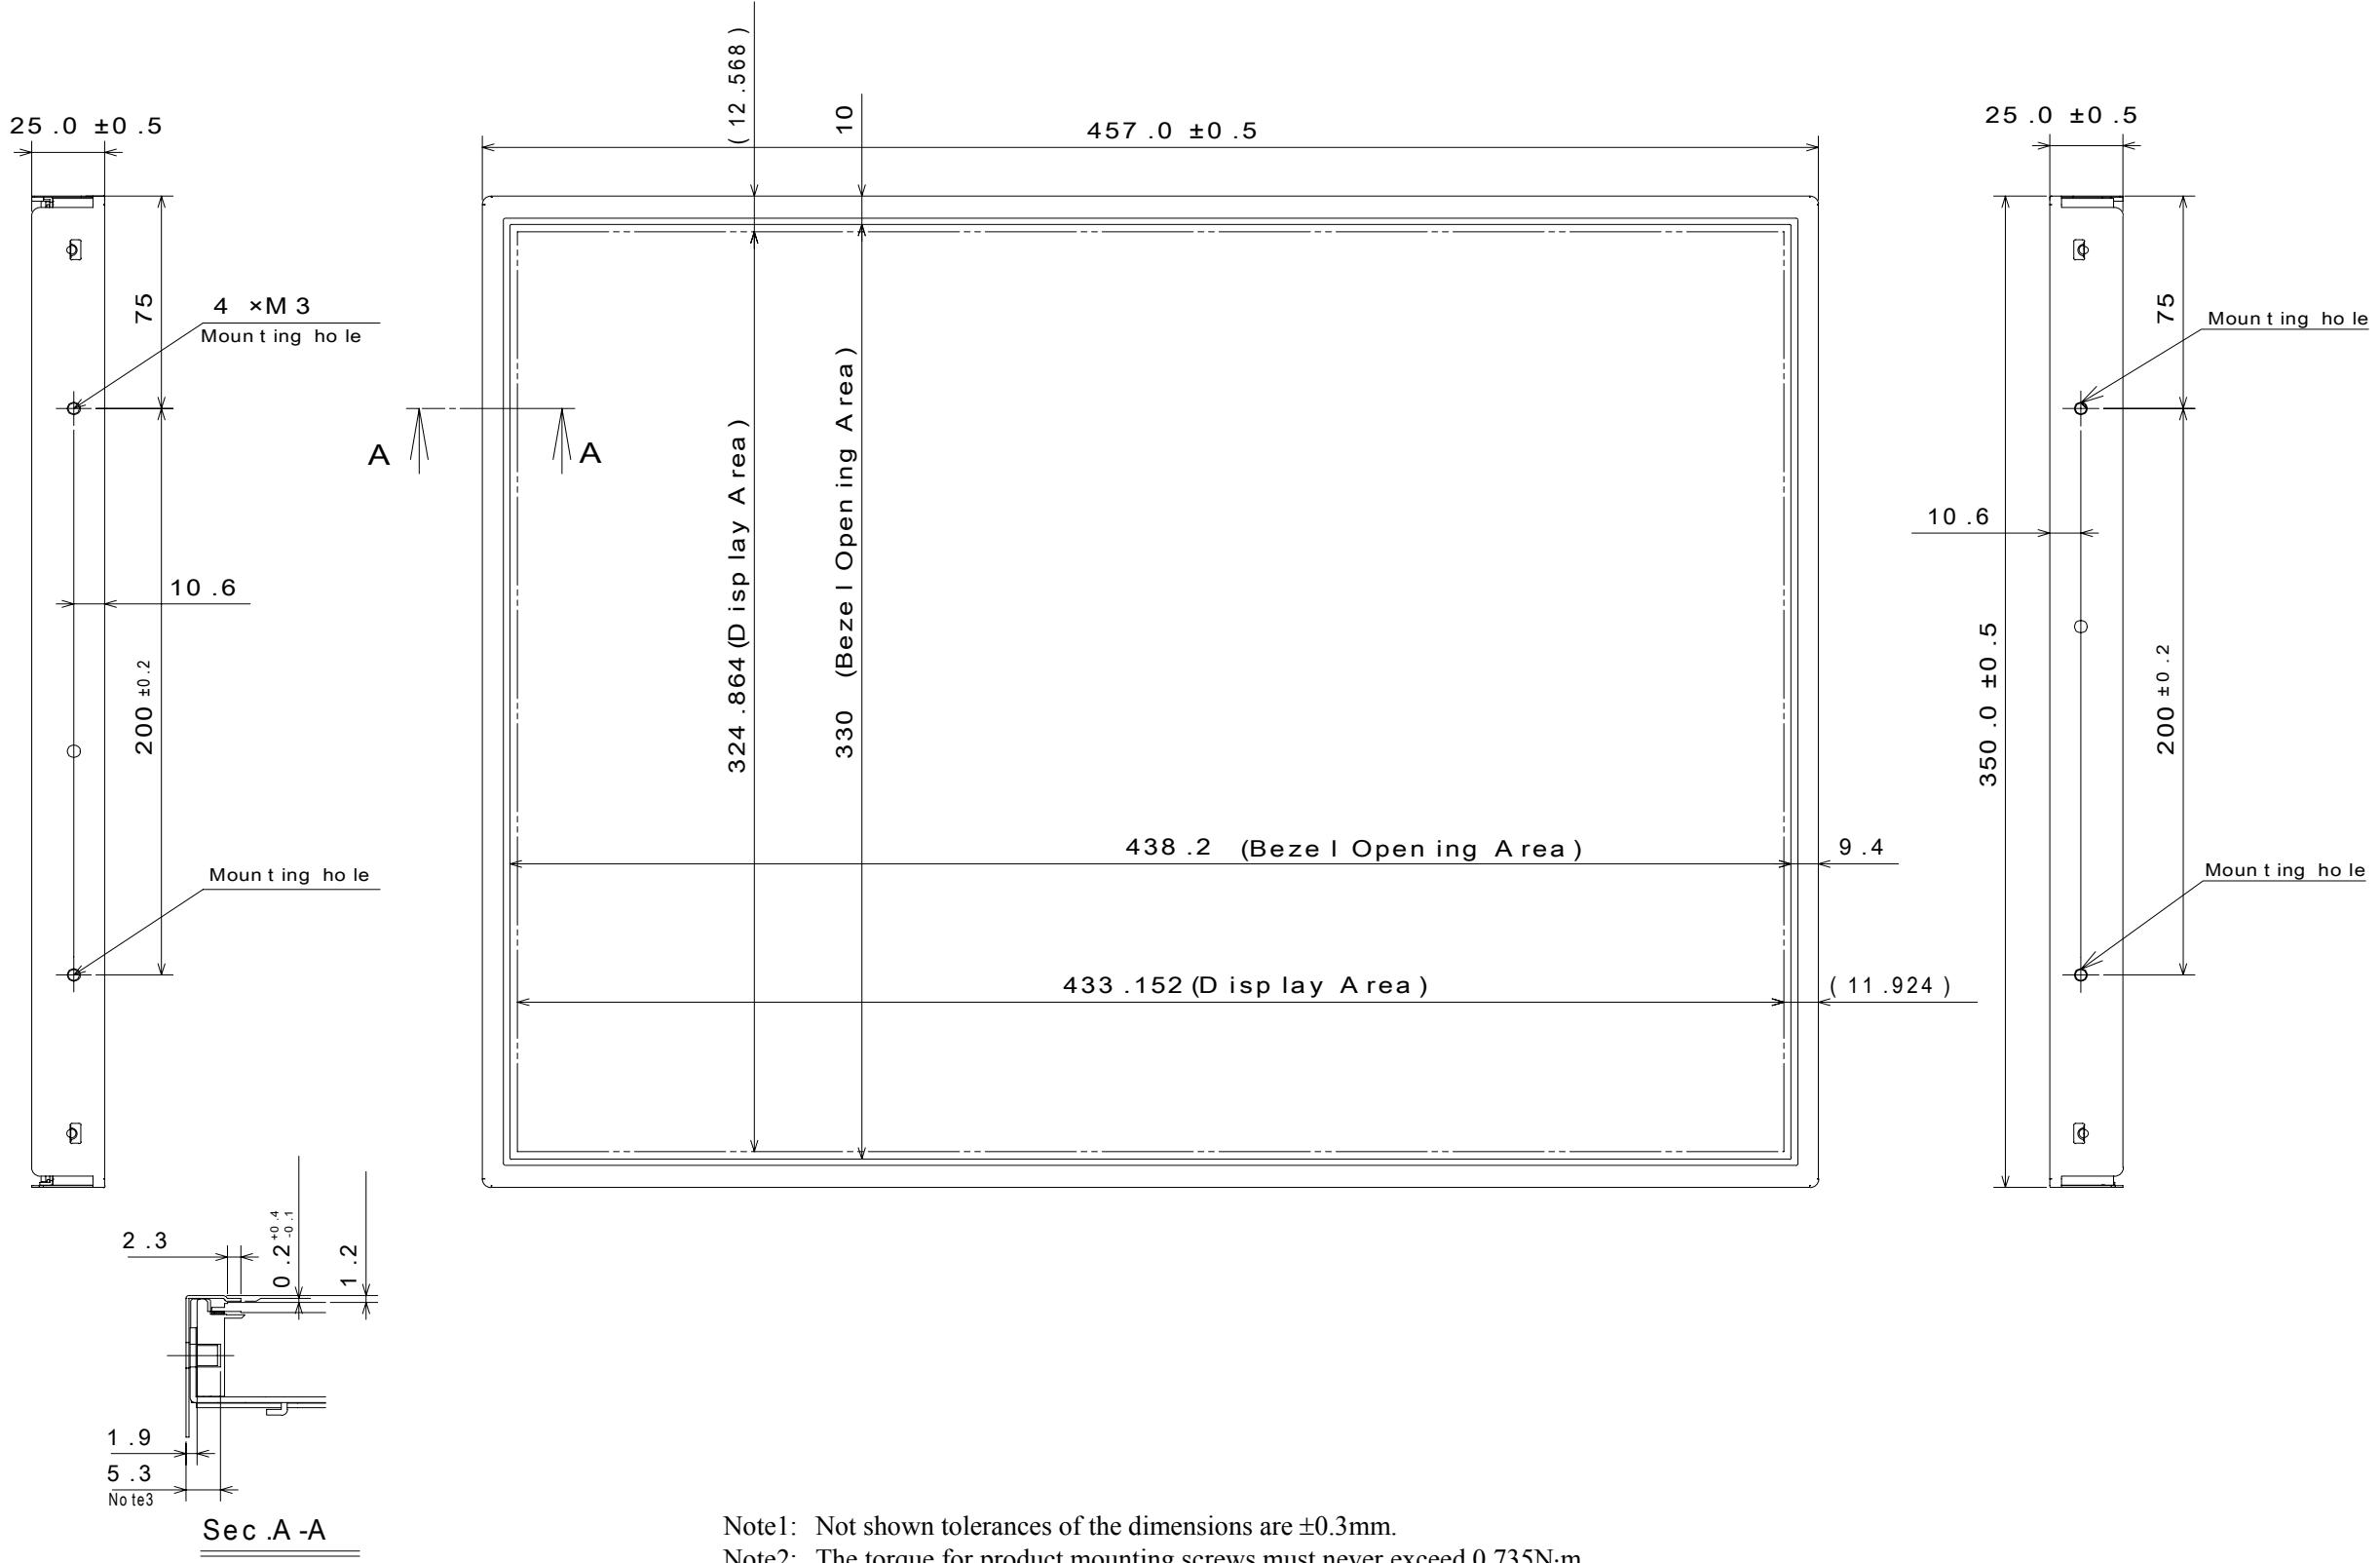

### 6.3.4 Other

- ① All VDD and GND terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR BACKLIGHT UNIT", when replacing backlight lamps.
- ④ Pack the product with original shipping package, in order to avoid any damages during transportation, when returning the product to NEC for repair and so on.
- ⑤ The LCD module by itself or integrated into end product should be packed and transported with display in the vertical position. Otherwise the display characteristics may be degraded.

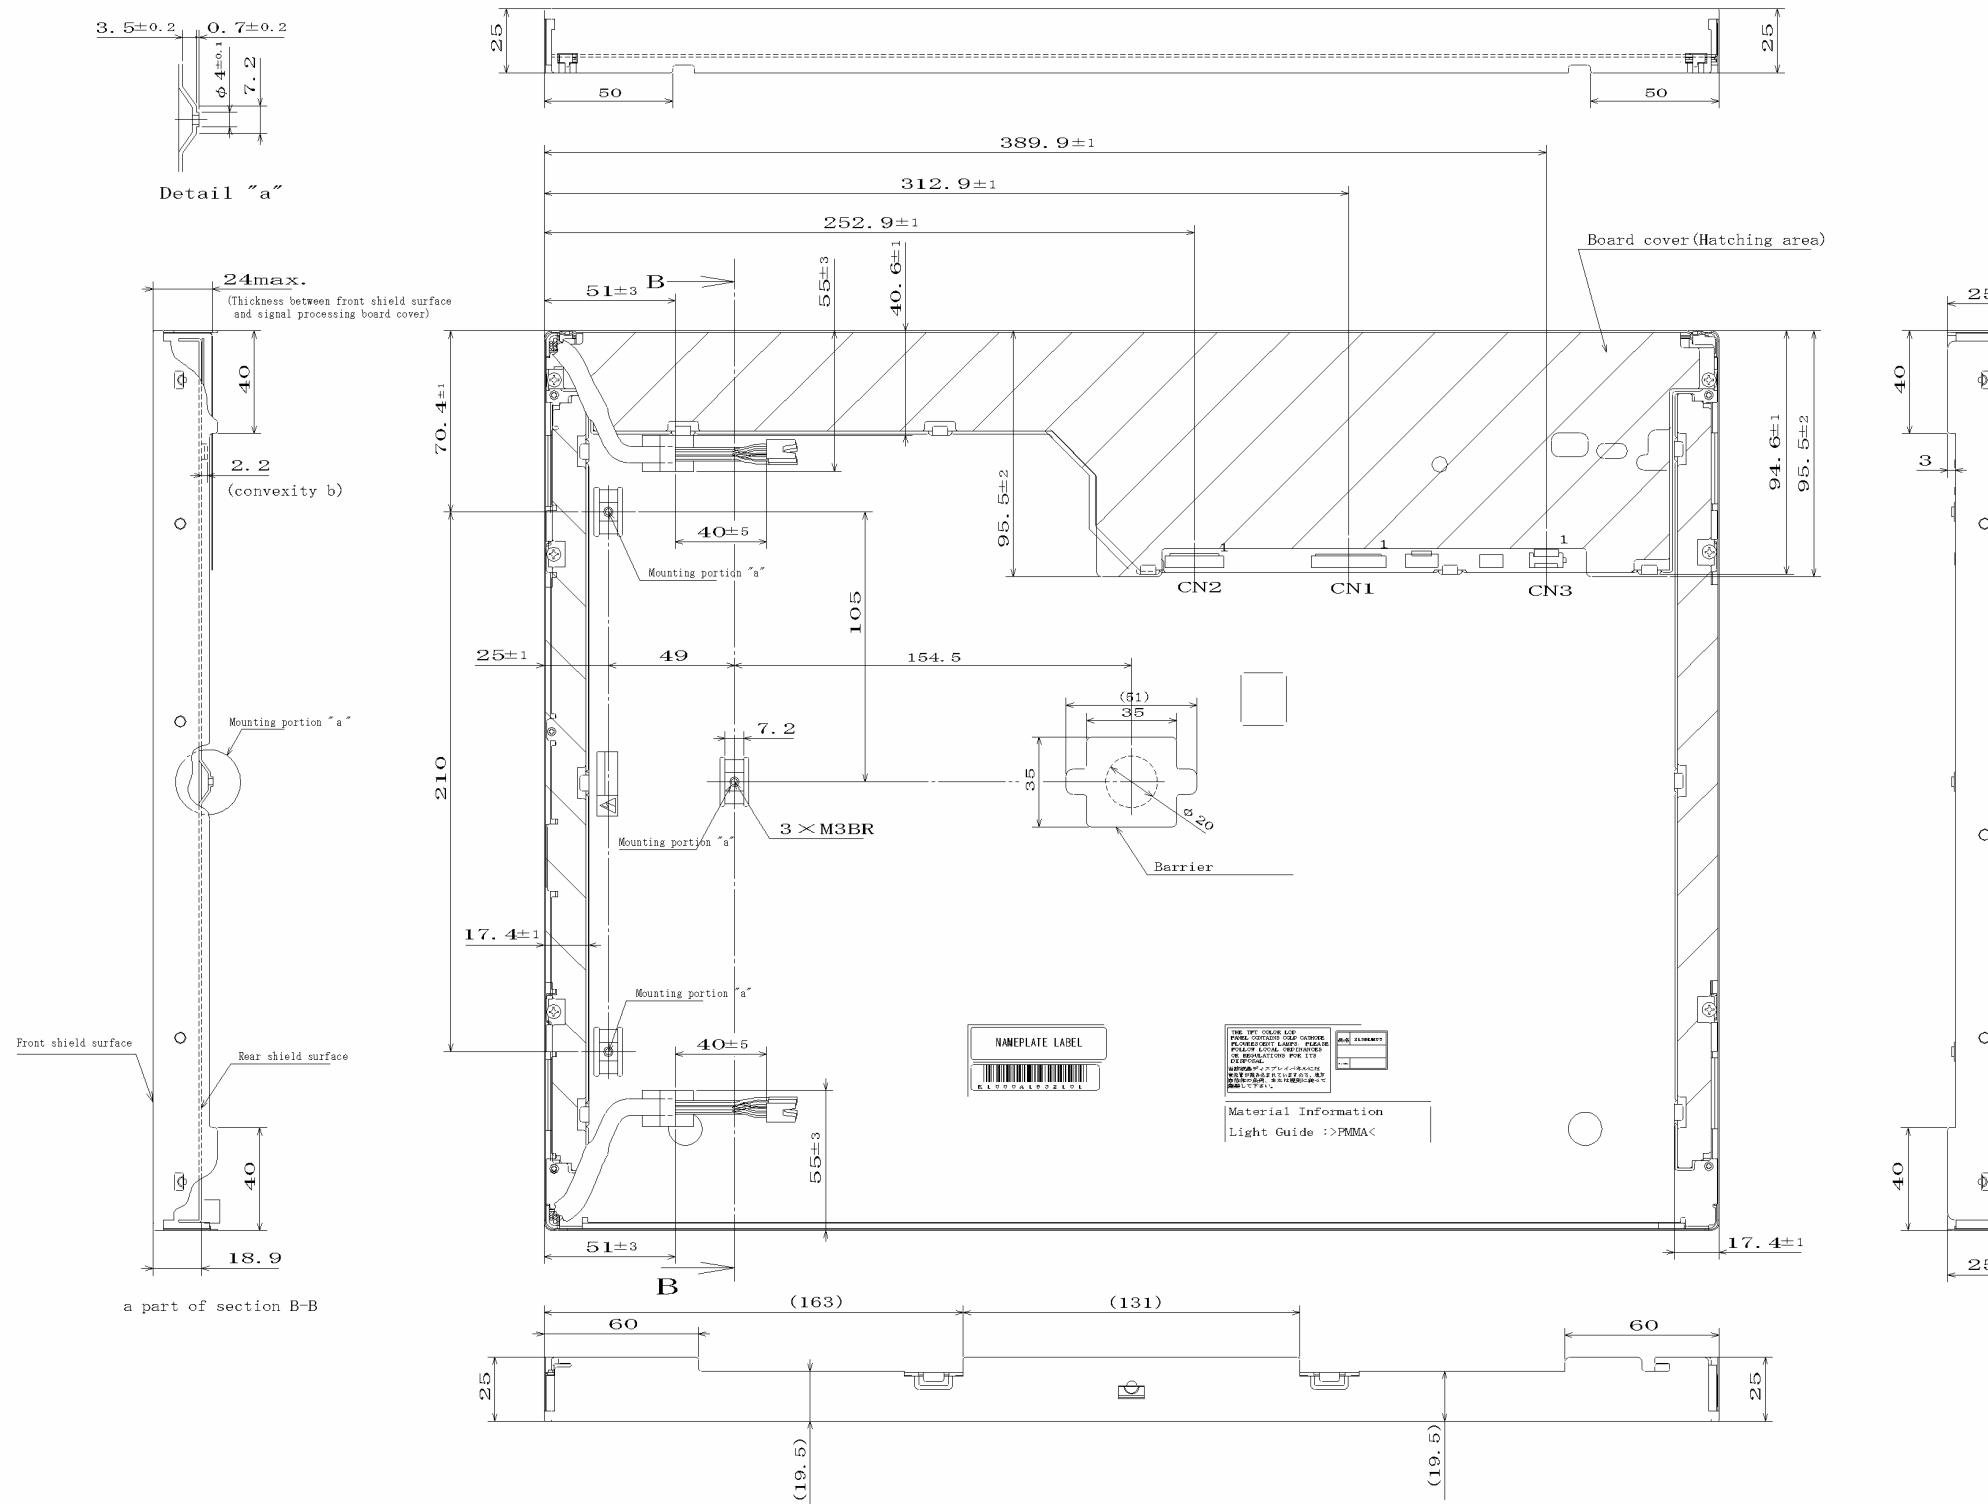

★

**7. OUTLINE DRAWINGS**

## 7.1 FRONT VIEW

## 7.2 REAR VIEW

Note1: Not shown tolerances of the dimensions are  $\pm 0.3\text{mm}$ .

Note2: The torque for product mounting screws must never exceed  $0.735\text{N}\cdot\text{m}$ .

Note3: The values in parentheses are for reference.
