

Signal Isolated RS-485 Transceiver With Integrated DC to DC Converter

Datasheet (EN) 0.1

Product Overview

NSiP83086C is a high reliability isolated full duplex RS-485 transceiver with integrated DC to DC converter. The NSiP83086C isolated DC-DC converter use on chip transformer. The feedback PWM signal is sent to primary side by a digital isolator based on Novosense capacity isolation technology. Both devices are safety certified by UL1577 support 5kVrms insulation withstand voltages, while the high integrated solution can help to simplify system design and improve reliability.

The Bus pins of NSiP83086C are protected from $\pm 10\text{kV}$ system level ESD to GND2 on Bus side. The device feature fail-safe circuitry, which guarantee a logic-high receiver output when the receiver inputs are open or shorted. The device have a 1/8-unit-load receiver input impedance that allows up to 256 transceivers on the bus.

Key Features

- Up to 5000Vrms Insulation voltage
- ISO-Power integrated isolated dc-to-dc converter
- I/O voltage range supports 1.8~5.5V MCU
- Power supply voltage:
VDD: 3.0V to 5.5V
VDDL: 1.8V to 5.5V
- Over current and over temperature protection
- High CMTI: $\pm 150\text{kV}/\mu\text{s}$
- Data rate: 16Mbps
- Up to 256 transceivers on the bus
- High system level EMC performance:
Bus Pins meet IEC61000-4-2 $\pm 10\text{kV}$ ESD
- Isolation Barrier Life: >60 years
- Operation temperature: $-40^\circ\text{C} \sim 105^\circ\text{C}$
- RoHS-compliant packages:
SOW20

Safety Regulatory Approvals

- UL recognition: up to 5000Vrms for 1 minute per UL1577
- CQC certification per GB4943.1-2011
- CSA component notice 5A
- DIN VDE V 0884-11:2017-01

Applications

- Industrial automation system
- Isolated RS-485 communication
- Smart electric meter and water meter
- Security and protection monitoring

1. Pin Configuration and Functions

Figure 1.1 NSiP83086C Package

Table1.1 NSiP83086C Pin Configuration and Description

NSiP83086C PIN NO.	SYMBOL	FUNCTION
1	GND1	Ground 1, the ground reference for Isolator Side 1
2	VDD	Power Supply for Isolator Side 1 ,It is recommended this pin have a 10 μ F capacitor to GND1 (Pin1,pin3)
3	GND1	Ground 1, the ground reference for Isolator Side 1
4	R	Receive output
5	/RE	Receive enable input. This is an active low input.
6	DE	Driver enable input. This is an active high input
7	D	Driver transmit data input.
8	VDDL	I/O Power Supply input. Side1 I/O logic level.
9	GND1	Ground 1, the ground reference for Isolator Side 1
10	GND1	Ground 1, the ground reference for Isolator Side 1
11	GND2	Ground 2, the ground reference for Isolator Side 2
12	VISOIN	Isolated power supply input. This pin must be connected externally to VISOOUT. It is recommended this pin have a 0.1 μ F capacitor to GND2 (Pin12). Connect this pin through a ferrite bead and short trace length to VISOIN for operation.
13	Y	Noninverting Driver Output. When the driver is disabled, or when VDD is powered down, Pin Y is put into a high impedance state to avoid overloading the bus.
14	GND2	Ground 2, the ground reference for Isolator Side 2
15	Z	Inverting Driver Output. When the driver is disabled, or when VDD is powered down, Pin Z is put into a high impedance state to avoid overloading the bus.

16	GND2	Ground 2, the ground reference for Isolator Side 2
17	B	Inverting Receiver Input.
18	A	Noninverting Receiver Input.
19	VISOOUT	Isolated Power Supply Output. This pin must be connected externally to VISOIN. It is recommended that a ferrite bead reservoir capacitor of 10 μ F and a decoupling capacitor of 0.1 μ F be fitted between Pin 19 and Pin 20.
20	GND2	Ground 2, the ground reference for Isolator Side 2

2. Absolute Maximum Ratings

Parameters	Symbol	Min	Typ	Max	Unit	Comments
Power Supply Voltage	VDD, VDDL	-0.5		6	V	
Maximum Input Voltage	/RE, DE, D	-0.4		VDDL+0.4	V	
Driver Output/Receiver Input Voltage	V _A , V _B , V _Y , V _Z	-7		12	V	
R output current	I _o	-15		15	mA	
Maximum Surge Isolation Voltage	V _{IOSM}			4.6	kV	
Operating Temperature	Topr	-40		105	°C	
Storage Temperature	Tstg	-40		150	°C	
Electrostatic discharge	HBM			±6000	V	
	CDM			±2000	V	

3. Recommended Operating Conditions

Parameters	Symbol	min	typ	max	unit
Power Supply Voltage	VDD	3.0		5.5	V
Operating Temperature	Topr	-40		105	°C
Logic High Level Input Voltage	V _{IH}	0.7*VDDL		VCC	V
Logic Low Level Input Voltage	V _{IL}	0		0.3*VDDL	V
Data rate	DR			16	Mbps

4. Thermal Information

Parameters	Symbol	Value	Unit
------------	--------	-------	------

IC Junction-to-Air Thermal Resistance	θ_{JA}	56.8	° C/W
Junction-to-case (top) thermal resistance	$\theta_{jc(top)}$	15.6	° C/W
Junction-to-board thermal resistance	θ_{JB}	28.5	° C/W

5. Specifications

5.1. DC Electrical Characteristics

(VDD=3.0V~5.5V, VDDL=1.8~5.5V, Ta=-40°C to 105°C. Unless otherwise noted, Typical values are at VDD=VDDL = 5V, Ta = 25°C)

6.3. Regulatory Information

The NSiP83086C are approved or pending approval by the organizations listed in table.

CUL		VDE		CQC
UL 1577 Component Recognition Program ¹	Approved under CSA Component Acceptance Notice 5A	DIN VDE V 0884-11(VDE V 0884-11):2017-01 ²		Certified by CQC11-471543-2012 GB4943.1-2011
Single Protection, 5000Vrms Isolation voltage	Single Protection, 5000Vrms Isolation voltage	Basic Insulation 1166Vpeak, $V_{IOSM}=4615\text{Vpeak}$		Basic insulation at 800V _{RMS} (1166Vpeak) Reinforced insulation at 400V _{RMS} (565Vpeak)
File (pending)	File (pending)	File (pending)		File (pending)

¹ In accordance with UL 1577, each NSiP83086C is proof tested by applying an insulation test voltage $\geq 6000\text{ V rms}$ for 1 sec.

² In accordance with DIN VDE V 0884-11, each NSi8100W/NSi8101W is proof tested by applying an insulation test voltage $\geq 1273\text{ V peak}$ for 1 sec (partial discharge detection limit = 5 pC). The * marking branded on the component designates DIN VDE V 0884-11 approval.

7. Function Description

NSiP83086C is a high reliability isolated full duplex RS-485 transceiver. Data isolation is achieved using Novosense integrated capacitive isolation that allows data transmission between the logic side and the Bus side. Both devices are safety certified by UL1577 support 5kV_{RMS} insulation withstand voltages.

7.1. True Fail-Safe Receiver Inputs

The devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. The receiver threshold is fixed between -10mV and -200mV, which meets EIA/TIA-485 standard. If the differential input voltage ($V_A - V_B$) is greater than or equal to -10mV, receiver output R is logic high. In the case of a terminated bus with all transmitters disabled, the differential input voltage is pulled to zero by the termination resistors. Due to the receiver threshold, the receiver output R is logic high.

7.2. Truth Tables¹

Table 7.1 Driver Function Table

VDD status	Input (D)	Enable Input (DE)	Outputs	
			Y	Z
PU	H	H	H	L
PU	L	H	L	H
PU	X	L	Z	Z
PU	X	OPEN	Z	Z
PU	OPEN	H	H	L
PD	X	X	Z	Z

Table 7.2 Receiver Function Table¹

VDD status	Differential Input ($V_A - V_B$)	Enable Input (/RE)	Output (R)
PU	$\geq -10\text{mV}$	L/Open	H
PU	$\leq -200\text{mV}$	L/Open	L
PU	Open/Short	L/Open	H
PU	X	H	Z
PU	Idle	L	H
PD	X	X	Z

¹ PD= Powered down; PU= Powered up; H= Logic High; L= Logic Low; X= Irrelevant; Z= High Impedance;

7.3. EMI Considerations

The NSiP83086C devices are using on chip transformer, so the power transfer must operate at high frequency allow higher efficiency transfer using the small transformer. This will cause emissions which need to pay attention to PCB layout if the application allow low emission. Please see the application note if needed.

7.4. Output Short And Over Temperature Protection

The NSiP83086C devices are protected against output short. When the devices detect the output is short, the device will be in Hiccup mode and the transfer power will be limited. So the temperature of the device will be low, and the device is protected.

The NSiP83086C devices are also protected against over temperature. When the devices detect the chip is over 165°C, the device will be shut down until the temperature of the device is below 145°C.

8. Application Note

8.1. 256 Transceivers on the Bus

The devices have a 1/8-unit-load receiver input impedance (96k Ω) that allows up to 256 transceivers on the bus. Connect any combination of these devices, and/or other RS-485 devices, for a maximum of 32 unit-loads to the line.

8.2. ESD Protection

ESD protection structures are enhanced on all pins to protect against electrostatic discharge encountered during handling and assembly. The Bus pins have extra protection against static electricity to both the logic side (VDD1 side) and bus side (VDD2 side).

ESD protection can be tested in various ways. Below is the ESD spec of the devices.

Bus pins:

- $\pm 8\text{kV}$ HBM.
- $\pm 10\text{kV}$ using the Contact Discharge method specified in IEC 61000-4-2

Other pins except bus pins:

- $\pm 6\text{kV}$ HBM.
- $\pm 7\text{kV}$ using the Contact Discharge method specified in IEC 61000-4-2

8.3. Layout Considerations

The NSiP83086C requires a 10 μF bypass capacitor between VDD1 and GND1, 10 μF bypass capacitor between VDD2 and GND2. The capacitor should be placed as close as possible to the package. To eliminate line reflections, each cable end is terminated with a resistor, whose value matches the characteristic impedance of the cable. It's good practice to have the bus connectors and termination resistor as close as possible to the A and B, Y and Z pins.

8.4. Typical Application
