Infrared receiver module

Data Sheet

● Description

The OS-1838B is miniaturized infrared receivers for remote control and other applications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single leadframe.

The epoxy package contains a special IR filter.

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

● Features

- Photo detector and preamplifier in one package .
- Internal filter for PCM frequency.
- Inner shield, good anti-interference ability.
- High immunity against ambient light.
- Improved shielding against electric field disturbance
- 3.0V or 5.0V supply voltage; low power consumption.
- TTL and CMOS compatibility.
- Suitable transmission code: NEC code, RC5 code.

● Applications:

1. Optical switch
2. Light detecting proton of remote control
 - AV instruments such as Audio, TV, VCR, CD, MD, DVD, etc.
 - Home appliances such as Air-conditioner, Fan, etc.
 - CATV set top boxes
 - Multi-media Equipment
