

# High Isolation Power Transformers

Toroid Platform SMD

-  Push Pull Converter Transformer
-  4KVrms Isolation (550Vrms Continuous)
-  Reinforced insulation, 8.5mm Creepage
-  Sidecar Package
-  **Patented:** US Pat 9,646,755

## Electrical Specifications @ 25°C - Operating Temperature -40°C to +125°C

Part Number	Inductance (1-3) (μH ±35%)	Leakage Inductance (1-3) with (4-6) shorted (μH MAX)	Capacitance (1, 2, 3) to (4, 5, 6) (pF MAX)	DCR (1-3) (Ω MAX)	DCR (4-6) (Ω MAX)	MAX (1-3) <sup>1</sup> (V-μsec Max)	Turns Ratio (1:3) (6:4)	Isolated Voltage (Vrms)
PH9384.011NL	538	0.8	20	0.30	0.40	24	1CT : 1CT	4000
PH9384.012NL	538	0.6	30	0.33	0.65	24	1CT : 2CT	
PH9384.021NL	538	1.6	15	0.30	0.25	24	2CT : 1CT

PH9384.038NL	538	0.7	30	0.40	0.90	27	3CT : 8CT	
PH9384.043NL	538	0.8	20	0.30	0.30	24	4CT : 3CT	
PH9384.083NL	538	2.0	15	0.30	0.22	24	8CT : 3CT	
PH9384.089NL	538	0.6	30	0.30	0.42	24	8CT : 9CT	

### Notes:

- The ET Max is calculated to limit the core loss and temperature rise at 200KHz based on a bipolar flux swing of 130mT Peak.
- For Push-Pull topology, where the voltage is applied across half the primary winding turns, the ET needs to be derated by 50% for the same flux swing.
- The applied ET may need to be further derated for higher frequencies based on the temperature rise which results from the core and copper losses
  - To calculate total copper loss (W), use the following formula:  

$$\text{Copper Loss (W)} = \text{Irms\_Primary}^2 * \text{DCR\_Primary} + \text{Irms\_Secondary}^2 * \text{DCR\_Secondary}$$
  - To calculate total core loss (W), use the following formula:  

$$\text{Core Loss (W)} = 2.72E-12 * (\text{Frequency in kHz})^{2.45} * (130 * [\text{ET/ET Max}])^{2.5}$$
- Where ET is the applied Volt Second, ET Max is the rated Volt Second for 130mT flux swing
- To calculate temperature rise, use the following formula:  

$$\text{Temperature Rise (°C)} = 154 * (\text{Core Loss (W)} + \text{Copper Loss (W)})$$
- The AEC-Q200 temperature and humidity operational life testing was completed using a dielectric strength test of 4000Vdc.
- Optional Tape & Reel packing can be ordered by adding a "T" suffix to the part number (i.e. PH9384.012NL becomes PH9384.012NLT). Pulse complies to industry standard tape and reel specification EIA481.
- The "NL" suffix indicates an RoHS-compliant part number.

FINAL OUTLINE

SUGGESTED LAND PATTERN

Weight .....0.85grams  
 Tape & Reel .....400/reel  
 Tray .....55/tray

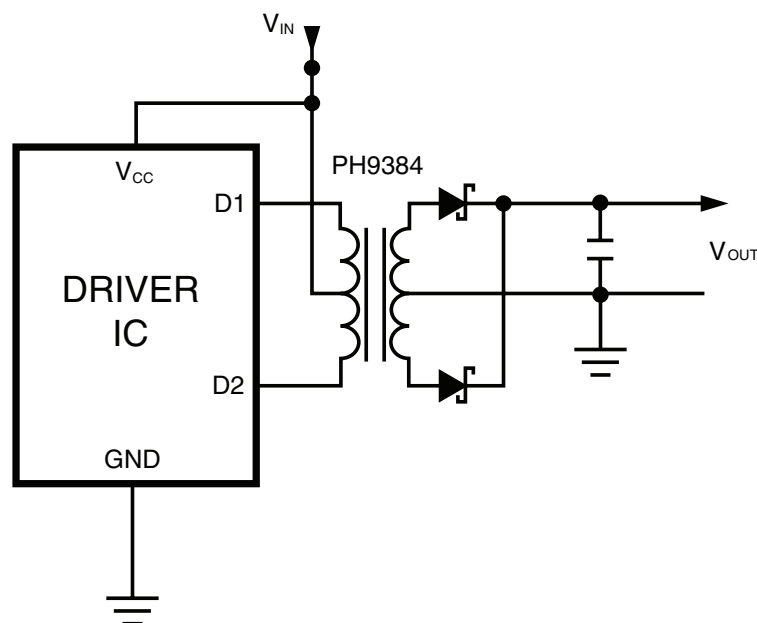

### Dimensions: mm

Unless otherwise specified,  
 all tolerances are ±0.25

## Application

PH9384NL is a series of high isolation power supply transformer drivers. Intended to operate in a fixed duty cycle Push Pull topology, it is a part of a low cost solution for delivering lower power (up to 3W) from a low voltage source. A typical implementation would be an isolated RS-485/RS-232 power supply driver circuit, the design is compatible with the MAXIM™ MAX253 IC.

A schematic diagram for the Push Pull converter topology is given below.

For a fixed 50% duty cycle mode of operation, the output voltage is simply determined by the input voltage and turns ratio. So, with the available turns ratios, a variety of output voltages can be selected. PH9384.034NL has been certified by UL to comply with UL60950-1 2 edition with reinforced insulation for a working voltage up to 300Vac. 7mm creepage and 3000Vrms isolation voltage is guaranteed to meet this requirement. The actual isolation voltage (550Vrms) and creepage (8.5mm) capability of the design exceeds these UL ratings.

The remainder of the PH9384.XXXNL series was not included in the UL certification but are fully compliant with the requirements for reinforced insulation.

MAXIM is a registered trademark of Maxim Integrated Products.
