Series PVY116

Microelectronic Power IC HEXFET® Power MOSFET Photovoltaic Relay Single-Pole, Normally-Open, 0-40V AC/DC, 250mA

General Description

The PVY116 Series Photovoltaic Relay is a singlepole, normally-open solid-state relay that can replace dry and Mercury-wetted reed relays in many applications. It utilizes International Rectifier's proprietary HEXFET power MOSFET as the output switch, driven by an integrated circuit photovoltaic generator of novel construction. The output switch is controlled by radiation from a GaAlAs light emitting diode (LED), which is optically isolated from the photovoltaic generator.

The PVY116 is ideally suited for use as matrix relay in low voltage ATE applications and general instrumentation applications involving high frequency test signals. This can be accomplished thanks to the extremely low Figure Of Merit (FOM = Coff * Ron), which is the product of the relay's off-state output capacitance and on-state resistance.

The PVY116 is packaged in a 4-pin, molded small outline package (SOP-4) with surface mount (gull wing) terminals. It is available in plastic shipping tubes or on tape-and-reel. Please refer to Part Identification information.

Applications

- **Automated Test Equipment**
- Instrumentation
- **Data Acquisition**

Features

- Low signal distortion at high frequencies
- Low Coff * Ron Figure Of Merit
- High off-state resistance
- Bounce-free operation
- 1,500 V_{RMS} I/O isolation
 Long operational life
- Solid-State Reliability
- ESD Tolerance 2000V Human Body Model
