

DESCRIPTION

The PW-2410RU is a regulated, universal input power pack capable of powering a 24-volt Crestron product from standard AC receptacle (rated at 100V - 240V, 50 - 60 Hz).

CAUTION:

Only connect this power pack to a Crestron device that is rated at 24 volts and no more than 1 amp. Plugging this power pack into a Crestron device that has different ratings could damage the device or the pack.

Indoor use only.

SPECIFICATIONS

Crestron suggests that only this power pack be used with designated Crestron products. In the event another compatible power pack (not supplied by Crestron) is required, the specifications are as follows.

Input: 100-240V~, 50-60Hz, 1A
Output: 24V ===, 1A

SPECIFICATIONS (Continued)

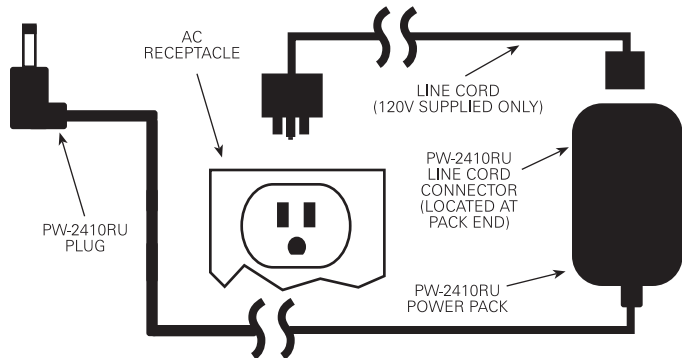

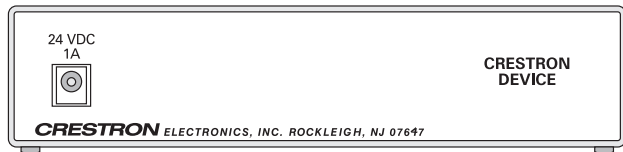

The polarity of the PW-2410RU plug is illustrated below.

**CONNECTING THE PW-2410RU**

1. Attach appropriate line cord (120V line cord supplied only) to the PW-2410RU line cord connector.
2. Insert other end of line cord into an active AC receptacle.
3. Insert the PW-2410RU plug into the DC power socket connector of a Crestron device.

NOTE:

Refer to illustration on back cover.
