DESCRIPTION

The FCT2X245T and FCT2X2245T are 16-bit non-inverting transceivers with three-state outputs that are useful for bus-oriented applications. The Transmit/Receive (T/ $\overline{R}$) inputs determine the direction of data flow, whether from A-to-B or B-to-A, and the Output Enable ($\overline{OE}$) inputs enable the selected port for output. The FCT2X2245T is a 25 Ω resistor output version useful for driving transmission lines and reducing system noise. All inputs have clamp diodes for undershoot noise suppression. All outputs have ground bounce suppression (see QSI Application Note AN-001), and outputs will not load an active bus when Vcc is removed from the device.
