# **VOLTAGE REGULATOR**

## **R×5RL SERIES**

**APPLICATION MANUAL**

### R×5RL SERIES

#### OUTLINE

The R×5RL Series are voltage regulator ICs with high accuracy output voltage and ultra-low quiescent current by CMOS process. Each of these ICs consists of a voltage reference unit, an error amplifier, a driver transistor, and resistors for setting output voltage. The output voltage is fixed with high accuracy.

Three types of packages, TO-92, SOT-89 (Mini-power Mold), SOT-23-5 (Mini-mold), are available.

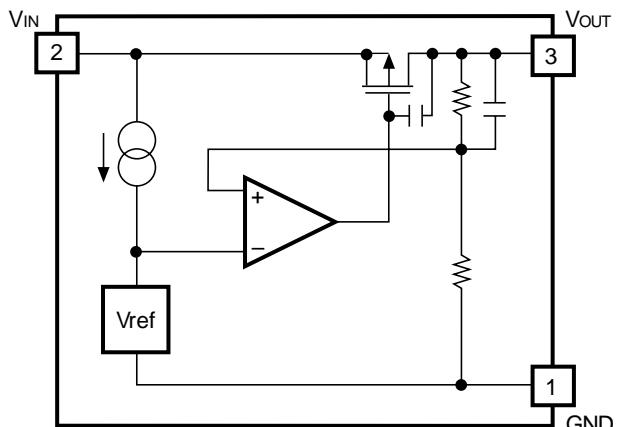

#### FEATURES

- Ultra-low Quiescent Current .....TYP. 1.1 $\mu$ A (R×5RL30A, VIN=5.0V)
- Small Dropout Voltage .....TYP. 30mV (R×5RL50A, I<sub>OUT</sub>=1mA)
- Low Temperature-Drift Coefficient of Output Voltage .....TYP.  $\pm$ 100 ppm/ $^{\circ}$ C
- Excellent Line Regulation .....TYP. 0.1%/V
- Output Voltage .....Stepwise setting with a step of 0.1V in the range of 2.0V to 6.0V is possible (refer to Selection Guide).
- High Accuracy Output Voltage ..... $\pm$ 2.5%
- Three Types of Packages .....TO-92, SOT-89 (Mini-power Mold), SOT-23-5 (Mini-mold)

#### APPLICATIONS

- Power source for battery-powered equipment.
- Power source for cameras, video instruments such as camcorders, VCRs, and hand-held communication equipment.
- Precision voltage references.

#### BLOCK DIAGRAM

## SELECTION GUIDE

The package type, the output voltage, the packing type, and the taping type of RX5RL Series can be designated at the user's request by specifying the part number as follows:

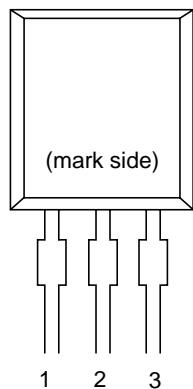

R×5RLXXXX - XX ← Part Number  
 ↑      ↑↑↑    ↑  
 a      b c d    e

Code	Contents
a	Designation of Package Type: E: TO-92 H: SOT-89 (Mini-power Mold) N: SOT-23-5 (Mini-mold)
b	Setting Output Voltage (VOUT): Stepwise setting with a step of 0.1V in the range of 2.0V to 6.0V is possible.
c	A
d	Designation of Packing Type: A: Taping C: Antistatic bag for TO-92 and samples
e	Designation of Taping Type: Ex. TO-92 : RF, RR, TZ SOT-89 : T1, T2 SOT-23-5 : TR, TL (refer to Taping Specifications) “TZ”, “T1”, and “TR” are prescribed as standard directions.

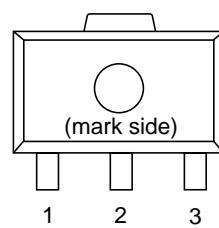

For example, the product with Package Type SOT-89, Output Voltage 5.0V, Version A, and Taping Type T1 are designated by Part Number RH5RL50AA-T1.

## PIN CONFIGURATION

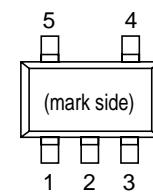

• TO-92

• SOT-89

• SOT-23-5

## PIN DESCRIPTION

• TO-92

Pin No.	Symbol
1	GND
2	VIN
3	VOUT

• SOT-89

Pin No.	Symbol
1	GND
2	VIN
3	VOUT

• SOT-23-5

Pin No.	Symbol

5	NC

## ABSOLUTE MAXIMUM RATINGS

Topt=25°C

Symbol	Item	Rating	Unit
VIN	Input Voltage	+12	V
VOUT	Output Voltage	-0.3 to VIN +0.3	V
IOUT	Output Current	150	mA
PD1	Power Dissipation 1 (NOTE1)	300	mW
PD2	Power Dissipation 2 (NOTE2)	150	mW
Topt	Operating Temperature	-40 to +85	°C
Tstg	Storage Temperature	-55 to +125	°C
Tsolder	Lead Temperature (Soldering)	260°C,10s	

(NOTE 1) applied to SOT-89 and TO-92

(NOTE 2) applied to SOT-23-5

### ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded even for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

## OPERATION

Output Voltage  $V_{OUT}$  divided at the node between Registers  $R_1$  and  $R_2$  is compared with Reference Voltage by Error Amplifier, so that a constant voltage is output.

## TYPICAL APPLICATION

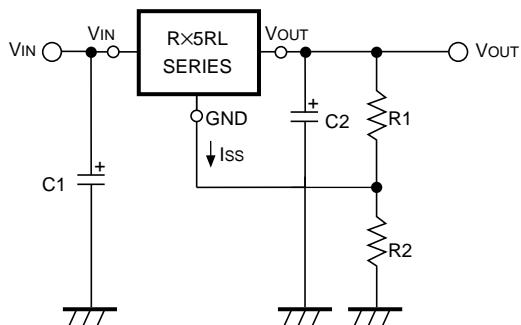

In RX5RL Series, a constant voltage can be obtained without using Capacitors C1 and C2. However, when the wire connected to Vin is long, use Capacitor C1. Output noise can be reduced by using Capacitor C2.

Insert Capacitors C1 and C2 with the capacitance of 0.1μF to 2.0μF between Input/Output Pins and GND Pin with minimum wiring.

## APPLICATION CIRCUITS

### • VOLTAGE BOOST CIRCUIT

The output voltage can be obtained by the following formula :

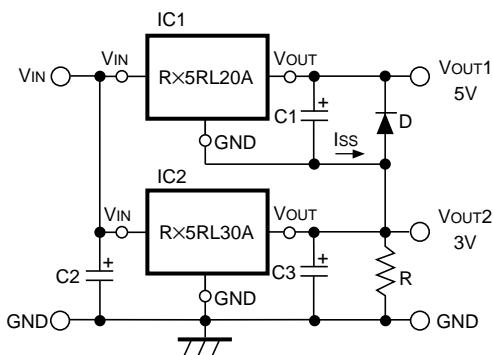

$$VOUT = Vreg \cdot (1 + R2/R1) + Iss \cdot R \cdot 2$$

Since the quiescent current of RX5RE Series is so small that the resistances of R1 and R2 can be set as large as several hundreds kΩ and therefore the supply current of "Voltage Boost Circuit" itself can be reduced.

Furthermore, since RX5RL Series are operated by a constant voltage, the supply current of "Voltage Boost Circuit" is not substantially affected by the input voltage.

\*) 1) Vreg : Set Output Voltage of RX5RL Series.

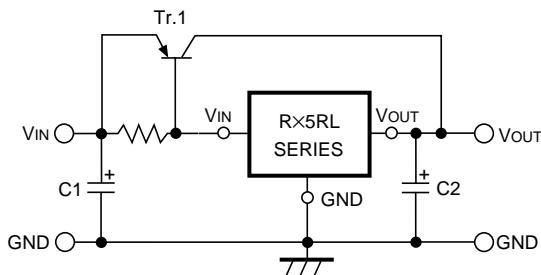

### • DUAL POWER SUPPLY CIRCUIT

As shown in the circuit diagram, a dual power supply circuit can be constructed by using two RX5RL Series.

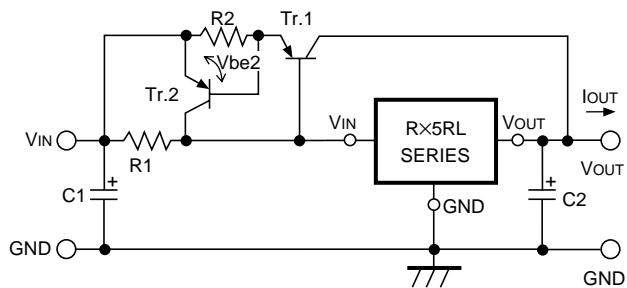

This circuit diagram shows a dual power supply circuit with an output of 3V and an output of 5V. When the minimum output current of IC2 is larger than Iss of IC1, Resistor R is unnecessary. Diode D is a protection diode for the case where VOUT2 becomes larger than VOUT1.

### • CURRENT BOOST CIRCUIT

Output current of 60mA or more can be obtained by the current boost circuit constructed as shown in this circuit diagram.

### • CURRENT BOOST CIRCUIT WITH OVERCURRENT LIMIT CIRCUIT

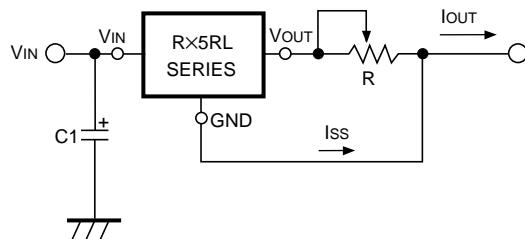

A circuit for protecting Tr.1 from the destruction caused by output short-circuit or overcurrent is shown in this circuit diagram.

When the voltage reduction caused by the current ( $\equiv$   $I_{OUT}$ ) which flows through  $R_2$  reaches  $V_{be2}$  of Tr.2 by additionally providing the current boost circuit with Tr.2 and  $R_2$ , Tr.2 is turned ON and the base current of Tr.1 is increased, so that the output current is limited.

Current limit of Overcurrent Limit Circuit is obtained as follows :

$$I_{OUT} \equiv V_{be2}/R_2$$

### • CURRENT SOURCE

A current source with the structure as shown in this circuit diagram can be used. Output Current  $I_{OUT}$  is obtained as follows :

$$I_{OUT} = V_{reg}^{*1}/R + I_{SS}$$

Take care that Output Current  $I_{OUT}$  does not exceed its allowable current.

\*1)  $V_{reg}$  : Set Output Voltage of RX5RL Series.
