

## FM/AM TUNER FREQUENCY & CLOCK DISPLAY DRIVER

### DESCRIPTION

The SC3610 is a frequency and clock display driver used for displaying FM/AM radio frequency or a 12 hour alarm clock. By using CMOS technology, it consumes very low power in clock display mode.

### FEATURES

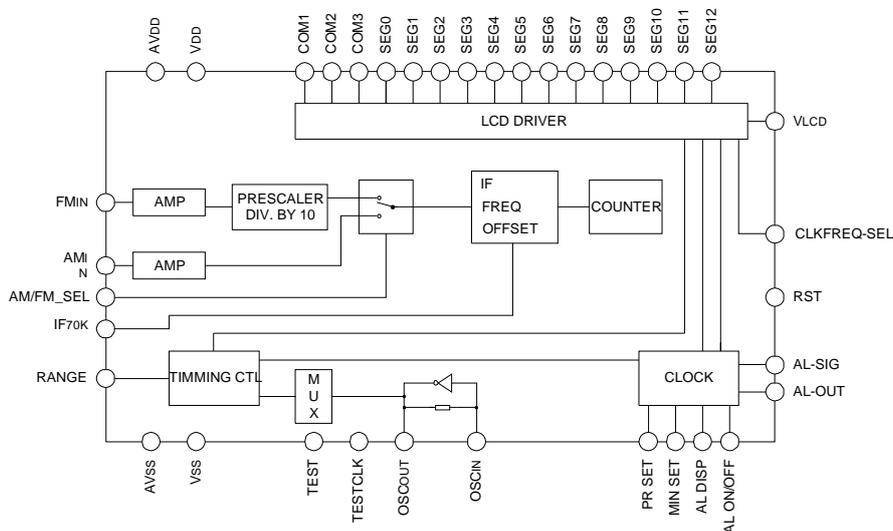

- \* FM input with pre-scaler for radio frequency up to 150 MHz
- \* AM input for radio frequency up to 30 MHz
- \* 3 common, 13 segment, 1/3 bias LCD display drivers which supports 4 digits LCD display
- \* On chip oscillator for external 32.768kHz crystal
- \* 10.7 MHz / 70 kHz I.F. frequency offset for FM signal and 455kHz I.F. frequency offset for AM signal
- \* Internal real time clock in 12 hour display mode
- \* Selectable clock or frequency display
- \* 1.8V to 3.3V supply voltage

### ORDERING INFORMATION

**PAD ASSIGNMENT**

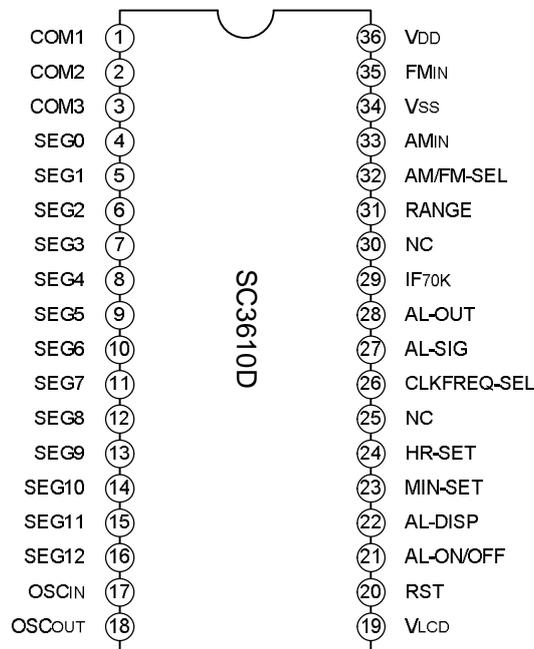

SC3610 (QFP-44-10x10-0.8 Package)

SC3610C (COB Package, QFP Type)

SC3610D (COB Package, SOP Type)

**PAD DESCRIPTION (The pad no. is according to SC3610C)**

| Pad No. | Symbol       | Description   |
|---------|--------------|---|
| 1       | VDD          | Supply voltage  |
| 2 ~ 4   | COM1 ~ COM3  | LCD common drive signal for driving LCD display   |
| 5 ~ 17  | SEG0 ~ SEG12 | LCD segment drive signal for driving LCD display  |
| 18      | OSCI         | 32.768 kHz crystal oscillator input pin   |
| 19      | OSCO         | 32.768 kHz crystal oscillator output pin  |
| 20      | VLCD         | LCD Supply voltage. Connects a 0.1 $\mu$ F capacitor between this pin and VSS   |
| 21      | RST          | Active low power-on reset with pull-up resistor of approx.750k $\Omega$   |
| 22      | TESTCLK      | For testing use only with internal pull-down  |
| 23      | TEST         | When high, the chip will enter test mode  |
| 24      | AL-ON/OFF    | Alarm function on or off in toggle mode. Internal pull up input   |
| 25      | AL-DISP      | When pressed, will display the alarm time. Internal pull up input   |
| 26      | MIN-SET      | Minute setting for time and alarm(together with AL-DISP). Internal pull up.   |
| 27      | HR-SET       | Hour setting for time and alarm(together with AL-DISP). Internal pull up.   |
| 28      | NC           | No connection   |
| 29      | CLKFREQ-SEL  | Clock or frequency display mode. Internal pull-down input. When low, clock will be displayed. When high, radio frequency will be displayed. |
| 30      | Vss          | Ground pin  |
| 31      | AL-SIG       | Open drain alarm signal output, active low.   |
| 32      | AL-OUT       | Alarm output at 1kHz with 0.2 sec on and 0.2 sec off, push-pull output.   |
| 33      | IF70k        | Select IF offset in FM mode. H:70kHz, L:10.7kHz   |
| 34      | NC           | No connection   |
| 35      | RANGE        | For frequency counting mode only, Range = H or L, gate time = 0.1S  |
| 36      | AM/FM-SEL    | AM/FM mode selection. High for AM and low for FM, internal pull-up.   |
| 37      | AVDD         | Analog Supply voltage   |
| 38      | AMIN         | AM signal input, 0.3V peak to peak, 500kHz to 30MHz.  |
| 39      | AVSS         | Analog Ground pin.  |
| 40      | FMIN         | FM signal input, 0.3V peak to peak, 11-150MHz.  |

**FUNCTIONAL DESCRIPTION**
**1. RADIO FREQUENCY DISPLAY OPERATION (DTS MODE):**

The FM and AM local oscillator output generated from the external RF receiver enters a high gain input comparator through the FMIN and the AMIN pins respectively. The FM signal then routes through a divide-by-10 dynamic pre-scalar. Depending on the state of the AM/FM-SEL pin, the FM and AM signal will be selected and enters the IF frequency offset block. Depending on the FM/AM selection, 10.7MHz/70kHz or 455kHz I.F. frequency will be subtracted or added from the input signal.

LCD Display Range:

| Mode | Range | Display range (on LCD) | Step   | Resolution |
|------|-------|------------------------|--------|------------|
| FM   | H     | 11.00 MHz to 99.99 MHz | 10kHz  | 1kHz       |
|      | L     | 11.00 MHz to 149.9 kHz | 100kHz | 10kHz      |
| AM   | H     | 500 kHz to 9999 kHz    | 1kHz   | 100kHz     |
|      | L     | 0.5 MHz to 29.99 MHz   | 10kHz  | 1kHz       |

Note: 1 When counter frequency overflow, MSB will not be displayed.

IF Offset for different application:

| IF70K | AMFM-SEL | IF OFFSET | OPERATION                          |
|-------|----------|-----------|------------------------------------|
| 0     | 0        | +10.7MHz  | Display FM input frequency 10.7MHz |
| 0     | 1        | +455kHz   | Display AM input frequency 455kHz  |
| 1     | 0        | -70 kHz*  | Display FM input frequency +70kHz  |
| 1     | 1        | +455 kHz  | Display AM input frequency 455kHz  |

\* Suitable to use with Silan SC1088.

## 2. CLOCK FUNCTION:

1) The clock will be advanced in the following flow:

PM 12:00 → PM 11:59 → AM 12:00 → 11:59

2) The [:] sign is the second indicator and will blink at a rate of 2Hz

3) TIME SETTING:

-- Pressing the keys combination of [TIME SET] [HR SET] or [TIME SET] [MIN SET] will enter the time setting mode.

-- One digit will be incremented after entering the alarm setting mode. Keep pressing the keys combination for more than 0.5 seconds will make the digit to be advanced at a rate of 2Hz.

4) ALARM TIME SETTING:

-- Pressing the keys combination of [AL DISP] [HR SET] or [AL DISP] [MIN SET] will enter the alarm time setting mode. The [AL] indicator will turn on and the [:] sign will stop blinking.

-- One digit will be incremented after entering the alarm setting mode. Keep pressing the keys combination for more than 0.5 seconds will make the digit to be advanced at a rate of 2Hz.

5) ALARM FUNTION:

-- AL OUT output pin will output an alarm frequency of 1024Hz at 0.2 sec on and 0.2 sec off.

-- AL OUT pin can be used to direct drive a piezo buzzer.

-- When alarm is active, AL OUT output can be disabled by pressing the [AL-ON/OFF] key or it will turn off automatically after 3 minutes lapse.

-- AL-SIG pin is an open drain output (active low). Once alarm is activated, AL-SIG can be disabled by pressing [AL-ON/OFF] key or it will turn off automatically after one hour time lapse.

-- When [AL DISP] is pressed, alarm setting time will be displayed on the LCD and the [AL] indicator will be on.

-- The [AL-ON/OFF] pin will toggle the [🔔] indicator to turn on of off the alarm function. When the indicator is on, alarm function is on.

6) 32.768kHz crystal is used for the reference frequency.

7) After Power-on-reset (RST):

-- [HR SET] and [MIN SET] keys will be disabled.

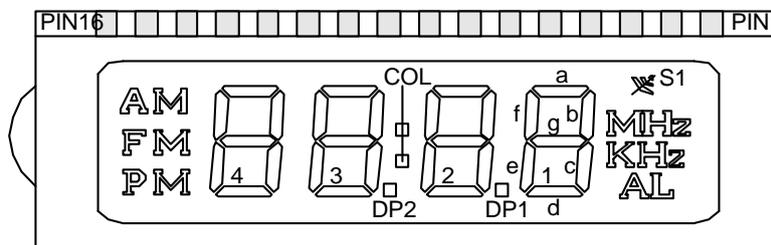

-- [AL-DISP] KEY,[AL-ON/OFF] KEY AND AL-SIG output will be enabled.

3. AFTER POWER-ON-SET (RST):

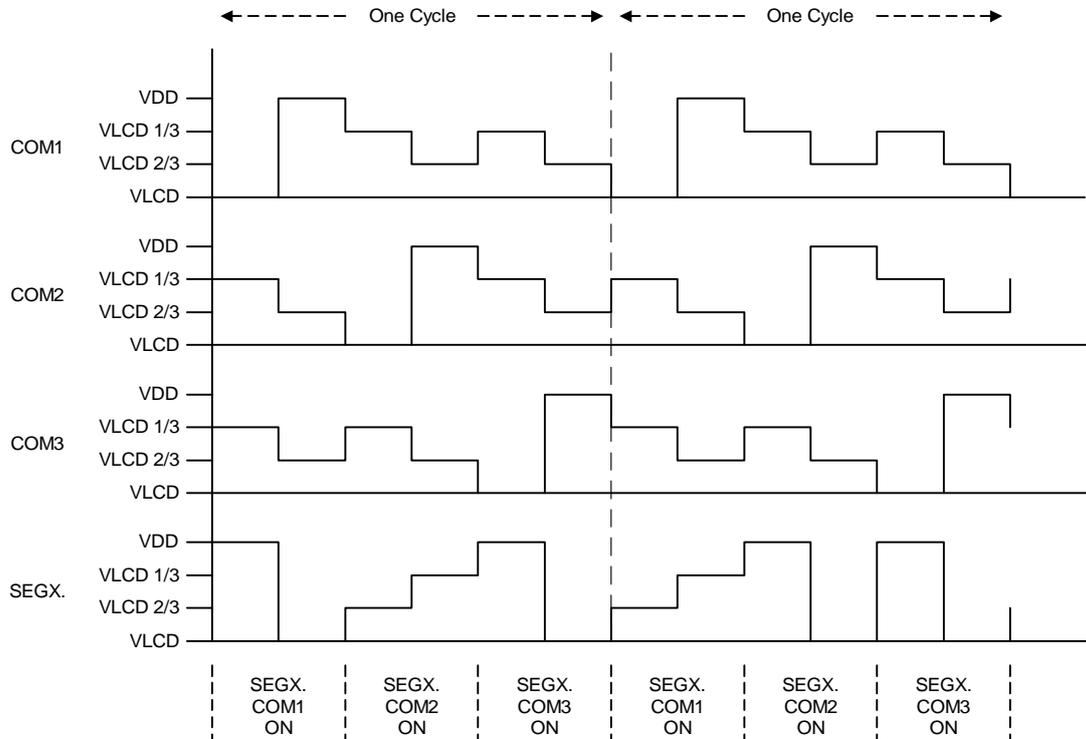

- When in clock mode, it will display and start at AM 7:00.
- When in DTS frequency mode, if CLKFREQ-SEL = High, and FMIN & AMIN pins are grounded, all LCD segments will be turned on(LCD test mode).

4. LCD PIN CONFIGURATION AND 0 TO 9 DIGITS SEGMENTS DISPLAY CONFIGURATION.

HANDLING MOS DEVICES:

Electrostatic charges can exist in many things. All of our MOS devices are internally protected against electrostatic discharge but they can be damaged if the following precautions are not taken:

- Persons at a work bench should be earthed via a wrist strap.
- Equipment cases should be earthed.
- All tools used during assembly, including soldering tools and solder baths, must be earthed.
- MOS devices should be packed for dispatch in antistatic/conductive containers.
