SFH202**SFH202a****PIN PHOTODIODE**

Package Dimensions in Inches (mm)

**FEATURES**

- TO-18 Hermetic Package
- Flat Glass Lens
- For Fiber Optic Communications

DESCRIPTION

SFH202 and SFH202a are planar silicon PIN-photo diodes. The case (18A2 DIN 41876 —similar to TO-18) has a flat glass lens top. The cathode is electrically connected to the case. The diode is a receiver with high operating frequency, very low reverse current, and fast switching time. Because of the flat lens, the diode is especially suitable for use with fiber optic cables, up to 560 Mbits.

DESCRIPTION

The SFH250/250F are fast silicon PIN photodiodes in a low cost plastic package for use in short distance data transmission using 1000 micron plastic fibers. Both come in a 5 mm (T1 $\frac{1}{4}$) plastic package featuring a tubular aperture which is wide enough to accommodate fiber and cladding. A microlens on the bottom of the aperture improves the light coupling efficiency of the fiber output into the photodiode.

The SFH250 has a clear plastic housing; the SFH250F has a black plastic housing.

Typical applications include automotive wiring, isolation interconnects, medical instruments, robotics, electronic games, and copy machines.
