

Product Description

Sirenza Microdevices' SGB-2433 is a high performance SiGe HBT MMIC amplifier utilizing a Darlington configuration with an active bias network. The active bias network provides stable current over temperature and process Beta variations. Designed to run directly from a 3V to 5V supply the SGB-2433 does not require a drop resistor as compared to typical Darlington amplifiers. This robust amplifier features a Class 1C ESD rating, low thermal resistance, and unconditional stability. The SGB-2433 product is designed for high linearity 3V gain block applications that require small size and minimal external components. It is on chip matched to 50 ohm and an external bias inductor choke is required for the application band.

Pin Out Description

Pin #	Function	Description
1,2,4,6,7,8,11,12,14	NC	These are no connect pins. Leave them unconnected on the PC board.
3	RFIN	RF input pin. A DC voltage should not be connected externally to this pin
5	GND	An extra ground pin that is connected to the backside exposed paddle. Connection is optional.
10	RFOUT	RF Output pin. Bias is applied to the Darlington stage thru this pin.
13	VBIAS	This pin sources the current from the active bias circuit. Connect to pin 10 thru an inductor choke.
16	VCC	This is Vcc for the active bias circuit.
Back-side	GND	The backside exposed paddle is the main electrical GND and requires multiple vias in the PC board to GND. It is also the main thermal path.

Simplified Device Schematic

Absolute Maximum Ratings

Parameters	Value	Unit
Current (Ic total)	60	mA
Device Voltage (V _D)	5	V
Power Dissipation	0.2	W
Operating Lead Temperature (T _L)	-40 to +85	°C
RF Input Power	20	dBm
Storage Temperature Range	-40 to +150	°C
Operating Junction Temperature (T _J)	+150	°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_L) / R_{TH, J-I}$$
