Description

The SKY13306-313LF is an IC FET SPDT switch in a low-cost miniature QFN- 6 plastic package. The SKY13306-313LF features low insertion loss, excellent linearity and positive voltage operation with very low DC power consumption. This general purpose switch can be used in a variety of telecommunications applications, and was designed for use as a transmit-receive switch for WLAN applications such as 802-11a/b/g. The QFN-6 package is lead (Pb)-free and meets all current requirements for RoHS.

NEW

Skyworks offers lead (Pb)-free, RoHS (Restriction of Hazardous Substances)-compliant packaging.

Product is in development stages, performance is based on simulation, and pin out and package are advanced and may change.

Performance is guaranteed only under the conditions listed in the specifications table and is not guaranteed under the full range(s) described by the Absolute Maximum specifications. Exceeding any of the absolute maximum/minimum specifications may result in permanent damage to the device and will void the warranty.

CAUTION: Although this device is designed to be as robust as possible, ESD (Electrostatic Discharge) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions must be employed at all times.

Truth Table

0	V_{HIGH}	Isolation	Insertion loss
V_{HIGH}	0	Insertion loss	Isolation

All other conditions not recommended. No damage to the switch will occur if a non-recommended combination of control voltages is present. The switch will not provide full isolation or minimum insertion loss under such conditions.
