

DATA SHEET

SKY77182 Power Amplifier Module for WCDMA / HSDPA (1920–1980 MHz)

Applications

- WCDMA Handsets
- HSDPA Handsets
- Personal Communications Services (PCS)
- Wireless local loop (WLL)

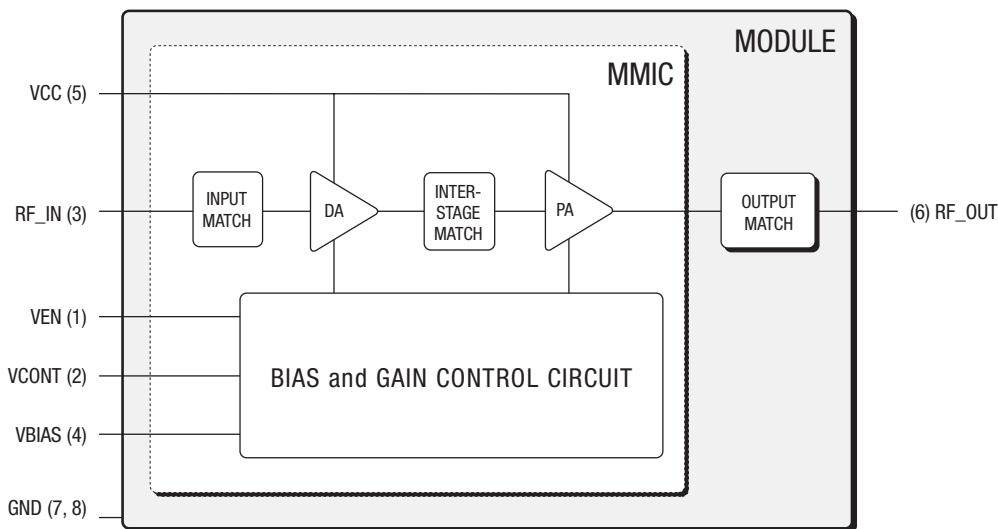

Features

- No V_{REF} required
- Low voltage positive bias
- 3.1 V to 4.6 V
- Supports low collector voltage operation
- Good linearity
- High efficiency at all power levels (17% at 15 dBm)
- Large dynamic range
- Low Profile package
- 3 mm x 3 mm x 0.9 mm
- 8-pad configuration
- Power down control
- InGaP
- Digital V_{ENABLE}
- Digital or Analog $V_{CONTROL}$

**Description**

The SKY77182 Power Amplifier module is a fully matched 8-pad surface mount module developed for Wideband Code Division Multiple Access (WCDMA) applications. This small and efficient power amplifier packs full coverage of the 1920–1980 MHz bandwidth into a single compact package. The SKY77182 meets the stringent spectral linearity requirements of HSDPA (High Speed Downlink Packet Access) data transmission with high power added efficiency for power output of up to 28 dBm. Because of high efficiencies attained throughout the entire power range, the SKY77182 delivers unsurpassed talk-time advantages.

The single Gallium Arsenide (GaAs) Microwave Monolithic Integrated Circuit (MMIC) contains all active circuitry in the module. The MMIC includes on-board bias circuitry, as well as input and interstage matching circuits. The output match is realized off-chip within the module package to optimize efficiency and power performance into a 50 Ω load. This device is manufactured with Skyworks' InGaP GaAs Heterojunction Bipolar Transistor (HBT) process that provides for all positive voltage DC supply operation while maintaining high efficiency and good linearity. Primary bias to the SKY77182 is supplied directly from a three-cell Ni-Cd, a single-cell Li-Ion, or other suitable battery with an output in the 3.1 to 4.6 volt range. No V_{REF} voltage is required. Power down is accomplished by setting the voltage on V_{ENABLE} to zero volts. Digital bias control can be used to optimize efficiency at high and low power or analog bias control can be used to optimize efficiency over the entire power range. No external supply side switch is needed as typical "off" leakage is a few microamperes with full primary voltage supplied from the battery.

Figure 1. SKY77182 Functional Block Diagram

Electrical Specifications

The following tables list the electrical characteristics of the SKY77182 Power Amplifier. Table 1 lists the absolute maximum ratings, while Table 2 shows the recommended operating conditions to achieve the performance characteristics for WCDMA and HSDPA listed, respectively, in Table 3 and

Table 5. Standard test configurations for WCDMA and HSDPA are shown in Table 4 and Table 6, respectively. Table 7 specifies the recommended control and collector voltages vs. output power for low collector voltage operation.

Table 1. Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Unit
RF Input Power	P _{IN}	—	8.0	dBm
Supply Voltage	V _{CC} , V _{BIAS}	—	6.0	Volts
Control Voltage	V _{CONT}	0	1.5	Volts
Enable Voltage	V _{EN}	—	3.0	Volts
Case Temperature	Operating	T _{CASE}	110	°C
	Storage	T _{STG}	125	
Ruggedness – no damage ²	R _u	—	10:1	VSWR

¹ No damage assuming only one parameter is set at limit at a time with all other parameters set at nominal value.

² P_{O_MAX}, all phases, time = 10 sec, continuous modulated signal.

Table 2. Recommended Operating Conditions

Parameter	Symbol	Minimum	Nominal	Maximum	Unit
RF Output Power	WCDMA	—	—	28	dBm
	HSDPA	—	—	27	
Operating Frequency	F ₀	1920	1950	1980	MHz
Supply Voltage ¹	V _{BATT}	3.1	3.4	4.6	Volts
	DC/DC	1.5	3.4	3.4	
Bias Voltage	V _{BIAS}	3.4	3.4	4.6	Volts
Enable Voltage	PA On	0.8	1.1	2.0	Volts
	PA Off	0.0	—	0.5	
V _{CONTROL} Range	High Power Range	0.5	1.0	1.0	Volts
Load Mismatch (all angles)	VSWR	—	1.0	—	VSWR
Case Operating Temperature	T _{CASE}	–20	25	85	°C

¹ When V_{CC} supply is ≤ 3.4 V, P_{O_MAX} must be backed off 0.5 dB.

Evaluation Board Description

The evaluation board is a platform for testing and interfacing design circuitry. To accommodate the interface testing of the SKY77182, the evaluation board schematic and diagrams are

included for preliminary analysis and design. Figure 2 shows the basic schematic of the board for the 1920 MHz to 1980 MHz range.

Package Dimensions and Pad Descriptions

The SKY77182 is a multi-layer laminate base, overmold encapsulated modular package designed for surface mount solder attachment to a printed circuit board. Figure 4 is a mechanical drawing of the pad layout for this package. Figure 5 provides a recommended phone board layout footprint for the PAM to help the designer attain optimum thermal conductivity, good grounding,

and minimum RF discontinuity for the 50-ohm terminals. Figure 6 shows the pad names and the pad numbering convention, which starts with pad 1 at the upper left, and increments counter-clockwise around the package. Figure 7 illustrates typical case markings.

NOTES: Unless otherwise specified

1. DIMENSIONING AND TOLERANCES IN ACCORDANCE WITH ASME Y14.5M–1994.
2. SEE APPLICABLE BONDING DIAGRAM AND DEVICE ASSEMBLY DRAWING FOR DIE AND COMPONENT PLACEMENT.
3. PADS ARE SOLDER MASK DEFINED ON ALL INSIDE EDGES.
4. ALL DIMENSIONS ARE IN MILLIMETERS.

Package and Handling Information

Because of its sensitivity to moisture absorption, this device package is baked and vacuum-packed prior to shipment. Instructions on the shipping container label must be followed regarding exposure to moisture after the container seal is broken, otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY77182 is capable of withstanding an MSL3/260 °C solder reflow. Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. If the part is attached in a reflow oven, the temperature ramp rate should not exceed 3 °C per second;

maximum temperature should not exceed 260 °C. If the part is manually attached, precaution should be taken to insure that the part is not subjected to temperatures exceeding 260 °C for more than 10 seconds. For details on attachment techniques, precautions, and handling procedures recommended by Skyworks, please refer to Skyworks Application Note: *PCB Design and SMT Assembly/Rework*, Document Number 101752. Additional information on standard SMT reflow profiles can also be found in the *JEDEC Standard J-STD-020*.

Production quantities of this product are shipped in the standard tape-and-reel format. For packaging details, refer to Skyworks Application Note: *Tape and Reel Information – RF Modules*, Document Number 101568.

Electrostatic Discharge Sensitivity

The SKY77182 is a Class 1 device. Figure 8 lists the Electrostatic Discharge (ESD) immunity level for each non-ground pad of the SKY77182 product. The numbers in Figure 8 specify the ESD threshold level for each pad where the I-V curve between the pad and ground starts to show degradation. ESD testing was performed in compliance with MIL-STD-883E Method 3015.7 using the Human Body Model. If ESD damage threshold magnitude is found to consistently exceed 2000 volts on a given pad, this so is indicated. If ESD damage threshold below 2000 volts is measured for either polarity, numbers are indicated that represent worst case values observed in product characterization.

Pad layout as seen from top view looking through package.

200850_008

Figure 8. SKY77182 ESD Sensitivity Areas

Various failure criteria can be utilized when performing ESD testing. Many vendors employ relaxed ESD failure standards, which fail devices only after “the pad fails the electrical specification limits” or “the pad becomes completely non-functional”. Skyworks employs most stringent criteria, fails devices as soon as the pad begins to show any degradation on a curve tracer.

To avoid ESD damage, both latent and visible, it is very important that the product assembly and test areas follow the Class 1 ESD

handling precautions listed below.

- Personnel Grounding
 - Wrist Straps
 - Conductive Smocks, Gloves and Finger Cots
 - Antistatic ID Badges
- Protective Workstation
 - Dissipative Table Top
 - Protective Test Equipment (Properly Grounded)
 - Grounded Tip Soldering Irons
 - Solder Conductive Suckers
 - Static Sensors
- Facility
 - Relative Humidity Control and Air Ionizers
 - Dissipative Floors (less than $10^9 \Omega$ to GND)
- Protective Packaging and Transportation
 - Bags and Pouches (Faraday Shield)
 - Protective Tote Boxes (Conductive Static Shielding)
 - Protective Trays
 - Grounded Carts
 - Protective Work Order Holders
