

# SLA3001M/3002M/3004M

## 3-Output Dropper/Switching Type

### ■Features

- 3 regulator ICs combined in 1 package
- Insulated single inline package
- Can be used with dropper type and switching type
- 3 independent circuits for input and output respectively. Internal dissipation can be reduced since different input voltages can be applied.
- Dropper type regulator IC is low-dropout voltage type with input/output voltage difference of 1V. Output ON/OFF control, variable output voltage (rise only) function
- Switching type: built-in separate excitation (60kHz), high efficiency of 80% or over
- Each regulator has overcurrent protection and thermal protection circuit.

### ■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

### ■Lineup

Part Number	SLA3001M			SLA3002M			SLA3004M		
	Type	Vo(V)	Io(A)	Type	Vo (V)	Io(A)	Type	Vo (V)	Io (A)
Regulator 1	Dropper	12	1.5	Switching	5	0.5	Switching	5	0.5
Regulator 2	Dropper	5	1.5	Dropper	15.7	1.0	Switching	9	0.4
Regulator 3	Dropper	9	1.5	Switching	9	0.4	Switching	9	0.4

### ■Absolute Maximum Ratings

Parameter	Symbol	Ratings									Unit
		SLA3001M			SLA3002M			SLA3004M			
		Reg1	Reg2	Reg3	Reg1	Reg2	Reg3	Reg1	Reg2	Reg3	
DC Input Voltage	V <sub>IN</sub>	35			35			35			V
Voltage of Output Control Terminal	V <sub>C</sub>	V <sub>IN</sub>			—	V <sub>IN</sub>	—	—			V
SW Terminal Applied Reverse Voltage	V <sub>SW</sub>	—			-1	—	-1	-1			V
Power Dissipation	P <sub>D</sub>	40(T <sub>C</sub> =25°C)			37.5(T <sub>C</sub> =25°C)			37.5(T <sub>C</sub> =25°C)			W
Junction Temperature	T <sub>J</sub>	+125			+150			+150			°C
Storage Temperature	T <sub>stg</sub>	-40 to +125			-40 to +150			-40 to +150			°C

\*1: I<sub>S1</sub> of Dropper Type is specified at -5(%) drop point of output voltage V<sub>O</sub>. I<sub>S1</sub> of Switching Type is specified at -10(%) drop point of output voltage V<sub>O</sub>.

\*2: Output is ON when V<sub>C</sub> terminal is open.

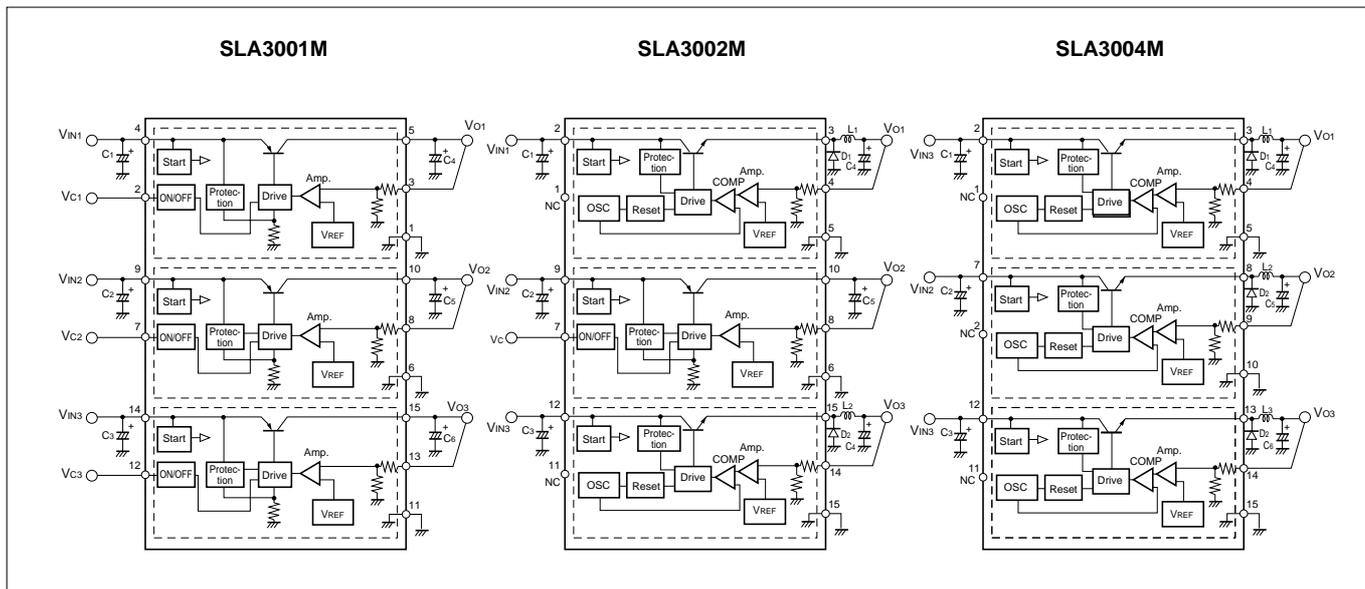

■Outline Drawing

■Block Diagram

■Standard External Circuit

**■Selecting External components for dropper type regulator**

**Input capacitor (Approx. 47 $\mu$ F)**

**Output capacitor (Approx. 47 to 100 $\mu$ F)**

- Low ESR capacitors are recommended for input and output when using them in low temperature conditions (0°C or less)

**■Selecting External components for switching type regulator**

**Input capacitor (Approx. 100 $\mu$ F)**

**Output smoothing capacitor (Approx. 330 $\mu$ F)**

- Input capacitor and output capacitor must satisfy allowable ripple current.
- Low ESR capacitors are recommended for reducing output ripple voltage.
- Low ESR capacitors are recommended for input and output when using them in low temperature conditions (0°C or less)

**Choke coil (200 $\mu$ H when  $V_o$  is 3.3V or 5V, 300 $\mu$ H when  $V_o$  is not 3.3V or 5V)**

- When its winding resistance is high, its efficiency may decrease and the rated value may not be achieved.
- Pay attention to heat from the choke coil due to magnetic saturation caused by overload, short circuit of load, etc. because the overcurrent protection starting current is approx. 1A.

**Flywheel diode (Sanken AK04 recommended)**

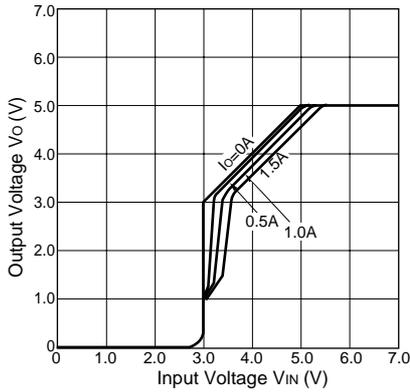

- Use a Schottky barrier diode for D<sub>1</sub>, D<sub>2</sub> and D<sub>3</sub> and make sure that the reverse voltage applied to SW output terminal does not exceed the value (–1V) given in the maximum ratings.
- If you use a fast recovery diode or any other diode, application of a reverse voltage generated from the recovery or ON voltage of the diode may damage the IC.

■Typical Characteristics

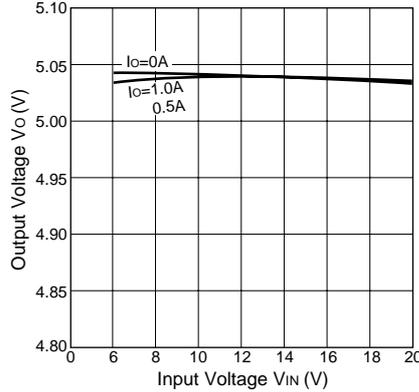

( $T_a=25^\circ\text{C}$ )

SLA3001M (Regulator 2,  $V_o=5\text{V}$ )

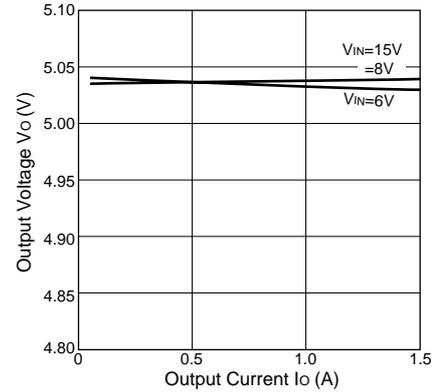

Rise Characteristics

ON/OFF Control Characteristics

Thermal Protection Characteristics

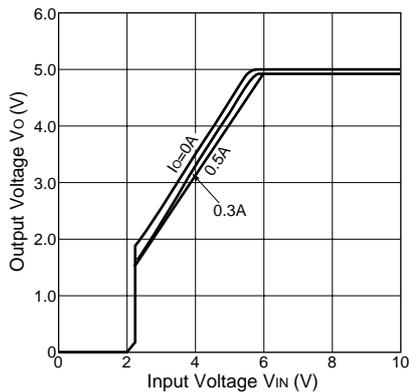

Note on Thermal Protection:

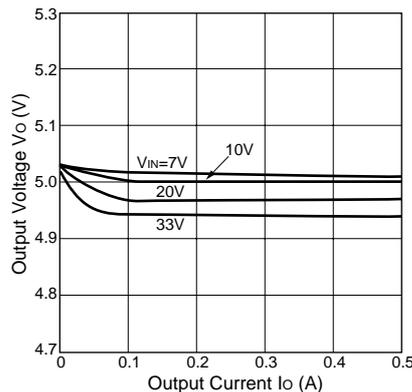

The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation is not guaranteed for short-circuiting over extended periods of time.
