

1.5/3.0/6.0 Gbps SATA/SAS Redriver

Check for Samples: [SN75LVCP600S](#)

FEATURES

- Single 3.3 V supply
- Suitable to receive 6.0 Gbps data over up to >40 inches (1.0 meter) of FR4 PC board
- Two-level RX and TX Equalization
 - RX→ 7, 15dB
 - TX→ 0, –1.3dB
- Pin-selectable SATA/SAS signaling
- Programmable squelch threshold for long channels

- Low active power and partial/slumber state support
 - 106mW TYP (Active Mode @6Gbps)
 - <11mW (when link in partial/slumber state)
- Ultra-small package for optimal placement
 - • 10-pad 2.5mm x 2.5mm QFN
- High ESD-transient protection
 - HBM: 9,000V
 - CDM: 1,500V
 - MM: 200V

APPLICATIONS

- Notebook and desktop PCs, docking stations, active cable, servers, workstations

DESCRIPTION

The SN75LVCP600S is a single channel SATA/SAS signal conditioner supporting data rates up to 6.0Gbps. The device complies with SATA physical spec rev 3.0 and SAS electrical spec 2.0 SN75LVCP600S operates from a single 3.3V supply and has 100Ω line termination with self-biasing feature, making the device suitable for AC coupling. The inputs incorporate an OOB (out-of-band) detector, which automatically squelch the output while maintaining a stable common mode voltage compliant to SATA/SAS link.

The SN75LVCP600S handles interconnect losses at its input with selectable equalization settings that can be programmed to match loss in the channel. For data rates of 3Gbps and lower the LVCP600S equalizes signals for a span of up to 50 inches of FR4 board material. For data rates of 6Gbps, the device compensates > 40 inches of FR4 material. Rx/Tx equalization level is controlled by the setting of signal control pins EQ and DE.

The device is hot-plug capable⁽¹⁾ preventing device damage during device *hot*-insertion such as async signal plug/removal, unpowered plug/removal, powered plug/removal, or surprise plug/removal.

Table 1. ORDERING INFORMATION⁽¹⁾

PART NUMBER	PART MARKING	PACKAGE
SN75LVCP600SDSKR	600S	10-pin DSK Reel (large)
SN75LVCP600SDSKT	600S	10-pin DSK Reel (small)

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

EQ = LVCP600S

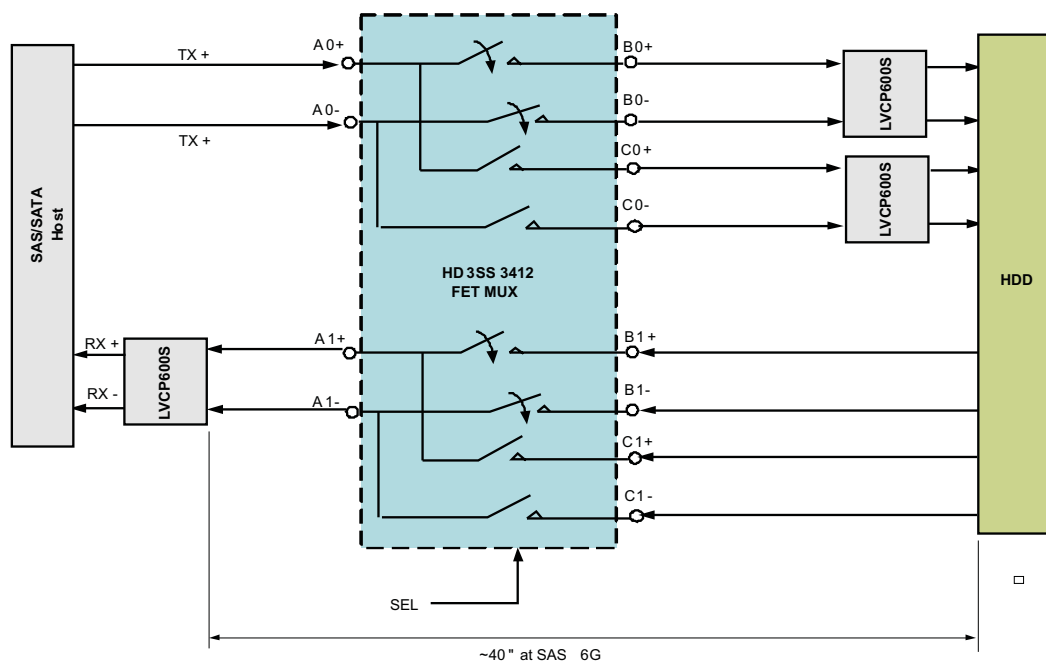

Figure 2. Typical Application

PIN ASSIGNMENTS

It is recommended to solder the package thermal pad to the ground plane for maximum thermal performance.

PIN FUNCTIONS

PIN		I/O TYPE	DESCRIPTION
NO.	NAME		
HIGH SPEED DIFFERENTIAL I/O			
3	RX+	I, CML	Non-inverting and inverting CML differential inputs. These pins are tied to an internal voltage bias by dual termination-resistor circuit.
4	RX–	I, CML	
8	TX+	I, CML	Non-inverting and inverting CML differential outputs. These pins are tied to an internal voltage bias by dual termination-resistor circuit.
7	TX–	I, CML	
CONTROL PINS			
5	EQ	I, LVCMOS	Selects equalization settings per Table 2 . Internally tied to GND.
9	DE	I, LVCMOS	Selects de-emphasis settings per Table 2 . Internally tied to GND.
1	MODE	I, LVCMOS	Selects SATA or SAS output levels per Table 2 . Internally tied to GND
10	SQ_TH	I, LVCMOS	Selects squelch threshold settings per Table 2 . Internally tied to GND
POWER			
2	V _{CC}	Power	Positive supply should be 3.3V ±10%
6	GND	Power	Supply ground

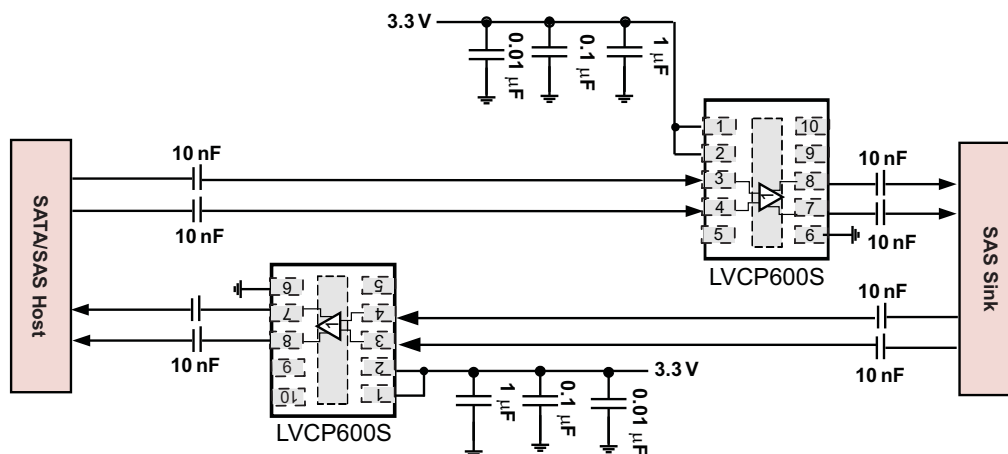

Table 2. EQ and DE Settings

Level	CONTROL PINS			
	EQ (typ) dB at 6Gbps	DE (typ) dB at 6Gbps	SQ_TH (see V _{OOB} spec)	MODE
0 (<i>default</i>)	7	0	Full Level (normal)	SATA
1	14	–1.3	Reduced Level (long channel)	SAS

Trace lengths are suggested values based on TI spice simulations (done over programmable limits of input EQ) to meet SATA/SAS loss and jitter spec.

Actual trace length supported by the LVCP600S may be more or less than suggested values and will depend on board layout, trace widths and number of connectors used in the high speed signal path. See eye diagrams at end of datasheet for more placement guidance.

Figure 3. Trace Length Example

- Place supply capacitors close to device pin
- EQ selection is set at 7db, device is set in SAS mode, DE and SQ_TH at default settings
- Actual EQ settings depend on device placement relative to host and SATA/SAS device

Figure 4. Typical Device Implementation

OPERATION DESCRIPTION

INPUT EQUALIZATION

The SN75LVCP600S supports programmable equalization in its front stage; the equalization settings are shown in [Table 2](#). The input equalizer is designed to recover a signal even when no eye is present at the receiver and will affectively support FR4 trace at the input anywhere from 4" to 40" at SATA 6G speed. In SAS mode, the device meets compliance point IR in a TXRX connection.

Figure 5. Compliance Point In SAS Mode

AUTO LOW POWER (ALP) MODE (see Figure 10)

As a redriver, the SN75LVCP600S does not participate in SATA or SAS link power management (PM) states. However, the redriver tracks link-power management mode (Partial and Slumber) by relying on the link differential voltage, V_{IDP-p} . The SATA/SAS link is continuously sending and receiving data even in long periods of disk inactivity by sending SYNC primitives (logical idle), except when the link enters Partial or Slumber mode. In these modes the link is in an electrical-idle state (EID). The device input squelch detector tracks EID status. When the input signal is in the electrical idle state, i.e. $V_{IDP-p} < V_{OOB_SATA}/V_{OOB_SAS}$ and stays in this state for $> 10\mu S$, the device automatically enters the low power state. In this state, the output is driven to V_{CM} and the device selectively shuts off internal circuitry to lower power consumption by ~90% of its normal operating power. While in ALP mode, the device continues to actively monitor input signal levels; when the input signal exceeds the SATA/SAS OOB upper threshold level, the device reverts to active state. Exit time from auto low power mode is $< 50ns$ (MAX).

OUT-OF-BAND (OOB) SUPPORT

The squelch detector circuit within the device enables full detection of OOB signaling as specified in the SATA and SAS specifications. Selection of squelch threshold level is made automatically based on the state of MODE pin, SATA or SAS. Squelch circuit ON/OFF time is 8ns max. While in squelch mode, outputs are held to V_{CM} .

DEVICE POWER

The SN75LVCP600S is designed to operate from a single 3.3V supply. Always practice proper power supply sequencing procedure. Apply V_{CC} first before any input signals are applied to the device. The power down sequence is in reverse order.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		VALUE	UNIT
Supply voltage range ⁽²⁾	V_{CC}	-0.5 to 4	V
Voltage range	Differential I/O	-0.5 to 4	V
	Control I/O	-0.5 to $V_{CC} + 0.5$	V
Electrostatic discharge	Human body model ⁽³⁾	± 9000	V
	Charged-device model ⁽⁴⁾	± 1500	V
	Machine model ⁽⁵⁾	± 200	V
Continuous power dissipation		See Dissipation Rating Table	

- (1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to network ground terminal.
- (3) Tested in accordance with JEDEC Standard 22, Test Method A114-B.
- (4) Tested in accordance with JEDEC Standard 22, Test Method C101-A.
- (5) Tested in accordance with JEDEC Standard 22, Test Method A115-A.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/ Ball Finish	MSL Peak Temp ⁽³⁾	Samples (Requires Login)
SN75LVCP600SDSKR	ACTIVE	SON	DSK	10	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	
SN75LVCP600SDSKT	ACTIVE	SON	DSK	10	250	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTE: A. All linear dimensions are in millimeters

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
