Note 1 : Ambient temperature=25℃.

Note 2 : To be measured in dark room.

Note 3 : To be measured with a viewing cone of 1° by Topcon luminance meter BM-7.

Note 4 : Definition of response time :

The output signals of photodetector are measured when the input signals are changed from "Black" to "White" (falling-time) and from "White" to "Black" (rising time), respectively.

The response time is defined as the time interval between the 10% and 90% of amplitudes.

Refer to Figure as below.

Note 5 : Definition of contrast ratio :

Contrast ratio is calculated with the following formula.

$$\text{Contrast Ratio (CR)} = \frac{\text{Photodetector output when LCD is at "White" state}}{\text{Photodetector output when LCD is at "Black" state}}$$

Note 6 : White $V_i = V_{150} \pm 1.5V$

Black $V_i = V_{150} \pm 2.0V$

V_{150} : The analog input voltage when transmission is 50%.

The 100% transmission is defined as the transmission of LCD panel when all the input terminals of module are electrically opened.

Note 7 : Measured on the center area of the panel.

Note 8 : Driving conditions for CCFT : $L_{rms} = 6.5mA$, $V_{rms} = 700V$.

Note 9 : Definition of viewing angle.

Refer to figure as below.
