FEATURES:

- Eutectic Die Attach
- Superior to LM117 Types
- Complimentary Use with SVR1085 Types
- Fast Switching
- Isolated Hermetically Sealed Power Package
- 150°C Operating Temperature
- Custom Lead Forming Available
- Ceramic Seal Package Available
- Class H or K (Space) Screening Available
- Radiation Tolerant Devices are Available

2/ Screening per MIL-PRF-19500.

3/ For Package Outlines and Lead Bend Options Contact Factory

4/ Devices are guaranteed to withstand transient Input Voltage up to 30V. For Input Voltages greater then the maximum operating Input Voltage some degradation of specifications will occur. For 5V and 12V devices operating at Input/Output differentials greater then 15V, a minimum external load of 5mA is required to maintain regulation.

5/ See Thermal Regulation specifications for changes in Output Voltage due to the heating effects. Line and Load Regulations are measured at a constant Junction Temperature by low duty cycle pulse testing. Load Regulation is measured at the Output Lead at approx. 1/8" from the package.

6/ Line and Load Regulation are guaranteed up to the maximum power dissipation of 15W. Power Dissipation is determined by the Input/Output differential and the Output Current. Guaranteed maximum power dissipation will not be available over the full Input/Output range.

7/ Dropout Voltage is specified over the full Output Current range of the Device.

8/ Minimum Load Current is defined as the minimum current required to maintain regulation. At 25V Input/Output differential the device is guaranteed to regulate if the Output Current is greater than 10mA.
