

SINGLE SUPPLY QUAD PECL/TTL-TO-PECL

Precision Edge®
SY100S815

FEATURES

- Quad PECL version of popular ECLinPS E111
- Low skew
- Guaranteed skew spec
- TTL enable input
- Selectable TTL or PECL clock input
- Single +5V supply
- Differential internal design
- PECL I/O fully compatible with industry standard
- Internal 75kΩ PECL input pull-down resistors
- Available in 16-pin SOIC package

Precision Edge®

DESCRIPTION

The SY100S815 is a low skew 1-to-4 PECL differential driver designed for clock distribution in new, high-performance PECL systems. It accepts either a PECL clock input or a TTL input by using the TTL enable pin TEN. When the TTL enable pin is HIGH, the TTL input is enabled and the PECL input is disabled. When the enable pin is set LOW, the TTL input is disabled and the PECL input is enabled.

The device is specifically designed and produced for low skew. The interconnect scheme and metal layout are carefully optimized for minimal gate-to-gate skew within the device. Wafer characterization and process control ensure consistent distribution of propagation delay from lot to lot. Since the S815 shares a common set of "basic" processing with the other members of the ECLinPS family, wafer characterization at the point of device personalization allows for tighter control of parameters, including propagation delay.

To ensure that the skew specification is met, it is necessary that both sides of the differential output are terminated into 50Ω, even if only one side is being used. In most applications, all nine differential pairs will be used and, therefore, terminated. In the case where fewer than nine pairs are used, it is necessary to terminate at least the output pairs on the same package side (i.e. sharing the same Vcc as the pair(s) being used on that side) in order to maintain minimum skew.

BLOCK DIAGRAM

PIN NAMES

Pin	Function
EIN, $\bar{E}IN$	Differential PECL Input Pair
TIN	TTL Input
TEN	TTL Input Enable
Q0, $\bar{Q}0 - Q3, \bar{Q}3$	Differential PECL Outputs
VCC	PECL Vcc (+5.0V)
VEE	PECL Ground (0V)

PACKAGE/ORDERING INFORMATION**16-Pin SOIC (Z16-1)****Ordering Information**

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY100S815ZC	Z16-1	Commercial	SY100S815ZC	Sn-Pb
SY100S815ZCTR ⁽¹⁾	Z16-1	Commercial	SY100S815ZC	Sn-Pb
SY100S815ZG ⁽²⁾	Z16-1	Industrial	SY100S815ZG with Pb-Free bar-line indicator	NiPdAu Pb-Free
SY100S815ZGTR ^(1, 2)	Z16-1	Industrial	SY100S815ZG with Pb-Free bar-line indicator	NiPdAu Pb-Free

Notes:

1. Tape and Reel.
2. Pb-Free package is recommended for new designs.

Notes:

1. Part-to-part skew is defined as Max. — Min. value at the given temperature.
2. The differential propagation delay is defined as the delay from the crossing points of the differential input signals to the crossing point of the differential output signals.
3. The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.
4. The within-device skew is defined as the worst case difference between any two similar delay paths within a single device.
5. V_{PP} (min.) is defined as the minimum input differential voltage which will cause no increase in the propagation delay. The V_{PP} (min.) is AC limited for the S815, as a differential input as low as 50mV will still produce full PECL levels at the output.
6. V_{CMR} is defined as the range within which the V_{IH} level may vary, with the device still meeting the propagation delay specification. The V_{IL} level must be such that the peak-to-peak voltage is less than 1.0V and greater than or equal to V_{PP} (min.).
