ABSTRACT OF THIS IC

This IC consists of (1) Input Amplifier, (2) Regulator, (3) Comparator and (4) Driver.

(1) Input Amplifier

It consists of the differential amplifier and the emitter follower. The function is the amplifier, the peak detector and the peak hold. There are two input amplifiers with parallel and the amplifier with larger input voltage operates.

(2) Regulator

It is stable to the ambient temperature drift and supply voltage variation. The reference voltage is 1.25V. It is used for the reference of the comparator.

(3) Comparator

It consists of the five comparators and ladder resistor. It drives the transistor that drives the LED in correspond to the output voltage of the amplifier.

(4) Driver

Each driver is the open collector and sinks current of 30mA.
