

TC7MH595FK

8 - Bit Shift Register / Latch (3 - State)

The TC7MH595 is an advanced high speed 8 - BIT SHIFT REGISTER/LATCH fabricated with silicon gate C²MOS technology.

It achieves the high speed operation similar to equivalent Bipolar Schttky TTL while maintaining the CMOS low power dissipation.

The TC7MH595 contains an 8 - bit static shift register which feeds an 8 - bit storage register.

Shift operation is accomplished on the positive going transition of the SCK input. The output register is loaded with the contents of the shift register on the positive going transition of the RCK input. Since RCK and SCK signal are independent, parallel outputs can be held stable during the shift operation. And, since the parallel outputs are 3 - state, it can be directly connected to 8 - bit bus. This register can be used in serial - to - parallel conversion, data receivers, etc.

An input protection circuit ensures that 0 to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

Features:

- High Speed..... $f_{MAX} = 185\text{MHz}(\text{typ.})$
at $V_{CC} = 5\text{V}$
- Low Power Dissipation..... $I_{CC} = 4\mu\text{A}(\text{max})$ at $T_a = 25^\circ\text{C}$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\% V_{CC} (\text{min})$
- Power Down Protection is provided on all inputs.
- Balanced Propagation Delays..... $t_{PLH} \approx t_{PHL}$
- Wide Operating Voltage Range..... $V_{CC} (\text{opr.}) = 2\text{V} \sim 5.5\text{V}$
- Low Noise..... $V_{OLP} = 1.0\text{V}(\text{max})$
- Pin and Function Compatible with 74ALS595

VSSOP16-P-0030-0.50

Weight: 0.02g (Typ.)

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

Truth Table

INPUTS					FUNCTION
SI	SCK	SCLR	RCK	$\overline{G}$	
X	X	X	X	H	QA thru QH outputs disable
X	X	X	X	L	QA thru QH outputs enable
X	X	L	X	X	Shift register is cleared.
L		H	X	X	First stage of S. R. becomes "L". Other stages store the data of previous stage, respectively.
H		H	X	X	First stage of S. R. becomes "H". Other stages store the data of previous stage, respectively.
X		H	X	X	State of S. R. is not changed.
X	X	X		X	S.R. data is stored into storage register.
X	X	X		X	Storage register stage is not changed.

X: Don't Care
