

**COMPLEMENTARY SILICON
HIGH-POWER TRANSISTORS**

General Purpose-Amplifier and Switching Application..

FEATURES:

- * Collector-Emitter Sustaining Voltage -
 $V_{CEO(sus)} = 120V$ (Min)- TIP33D,TIP34D
 140V (Min)- TIP33E,TIP34E
 160V (Min)- TIP33F,TIP34F
- * Current Gain-Bandwidth Product-
 $f_T = 3.0\text{MHz}(\text{Min}) @ I_C = 0.5 \text{ A}$

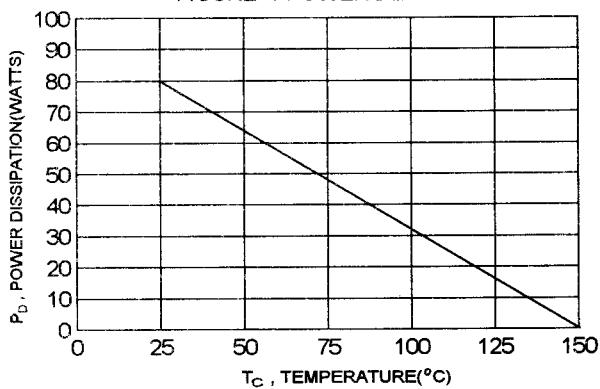

MAXIMUM RATINGS

Characteristic	Symbol	TIP33D TIP34D	TIP33E TIP34E	TIP33F TIP34F	Unit
Collector-Emitter Voltage	V_{CEO}	120	140	160	V
Collector-Base Voltage	V_{CBO}	160	180	200	V
Emitter-Base Voltage	V_{EBO}		5		V
Collector Current - Continuous - Peak	I_C		10 15		A
Base Current	I_B		3		A
Total Power Dissipation@ $T_c = 25^\circ\text{C}$ Derate above 25°C	P_D		80 0.64		W $\text{W}/^\circ\text{C}$
Operating and Storage Junction Temperature Range	T_J, T_{STG}		-65 to +150		$^\circ\text{C}$

THERMAL CHARACTERISTICS

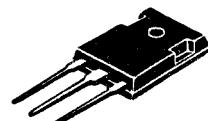

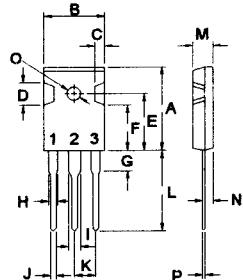

Characteristic	Symbol	Max	Unit
Thermal Resistance Junction to Case	$R_{\theta jc}$	1.56	$^\circ\text{C}/\text{W}$

FIG-2 ACTIVE- REGION SAFE OPERATING AREA

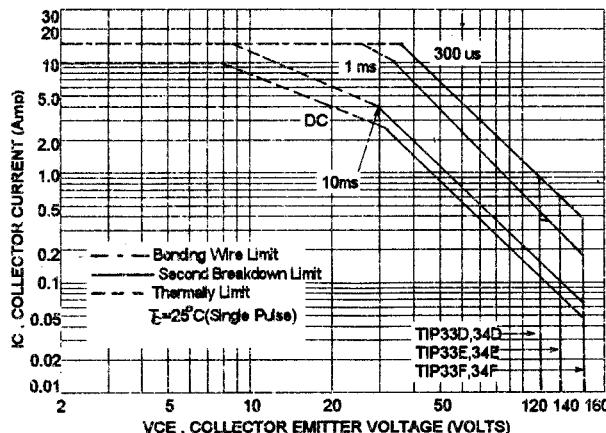

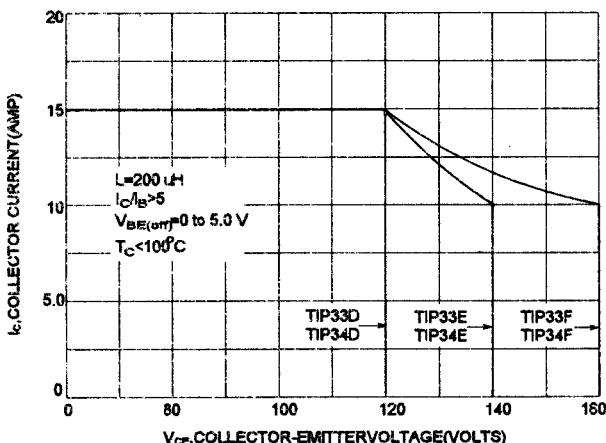

FIG-3 REVERSE BIAS SAFE OPERATING AREA

FORWARD BIAS

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate I_c - V_{ce} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of FIG-2 is base on $T_c=25^{\circ}\text{C}$; $T_{J(\text{PK})}$ is variable depending on power level. Second breakdown pulse limit t_s are valid for duty cycles to 10% but must be derated when $T_c \geq 25^{\circ}\text{C}$, second breakdown limitations do not derate the same as thermal limitations.

REVERSE BIAS

For inductive loads, high voltage and high current must be sustained simultaneously during turn-off, in most cases with the base-to-emitter junction reverse biased under these conditions the collector voltage must be held to a safe level at or below a specific value of collector current. This can be accomplished by several mean such as active clamping, RC snubbing, load line shaping, etc. the safe level for these devices is specified as Reverse Bias Safe Operating Area and represents the voltage-current condition allowable during reverse biased turn-off. This rating is verified under clamped conditions so that the device is never subjected to an avalanche mode. FIG-3 gives the RBSOA characteristics.

FIG-4 DC CURRENT GAIN
