

OPTIREG™ linear TLE4476D

Dual low-drop voltage regulator

RoHS

Features

- Output 1: 350 mA, 3.3 V \pm 4%
- Output 2: 430 mA, 5.0 V \pm 4%
- Enable input for output 2
- Low quiescent current in OFF state
- Wide operation range: up to 42 V
- Reverse battery protection: up to 42 V
- Output protected against short-circuit
- Wide temperature range: -40°C to +170°C
- Ovvoltage protection up to 65 V (< 400 ms)
- Overtemperature protection
- Overload protection
- Green Product (RoHS compliant)

Potential applications

General automotive applications.

Product validation

Qualified for automotive applications. Product validation according to AEC-Q100.

Description

The TLE4476D is a monolithic integrated voltage regulator providing two output voltages, Q1 is a 3.3 V output for loads up to 350 mA and Q2 is a 5 V output providing 430 mA. Output 2 can be switched ON/OFF via the enable input EN. The device is available in the PG-T0252-5 (DPAK) package.

The TLE4476D is designed to supply microprocessor systems under the severe conditions of automotive applications and is therefore equipped with additional protection functions against overload, short-circuit and overtemperature.

- 1) Input voltage V_i required for operation of output Q1.
- 2) Input voltage V_i required for operation of output Q2.
- 3) The overtemperature protection is set to $> 170^\circ\text{C}$. The voltage regulator may not be operated continuously at 170°C as device reliability will be reduced to 500 h statistical lifetime.
- 4) Worst case regarding peak temperature, zero airflow; mounted on a PCB $80 \times 80 \times 1.5 \text{ mm}^3$, 35 μm Cu, 5 μm Sn, heat sink area 300 mm^2 .

Note: In the operating range the functions given in the circuit description are fulfilled.

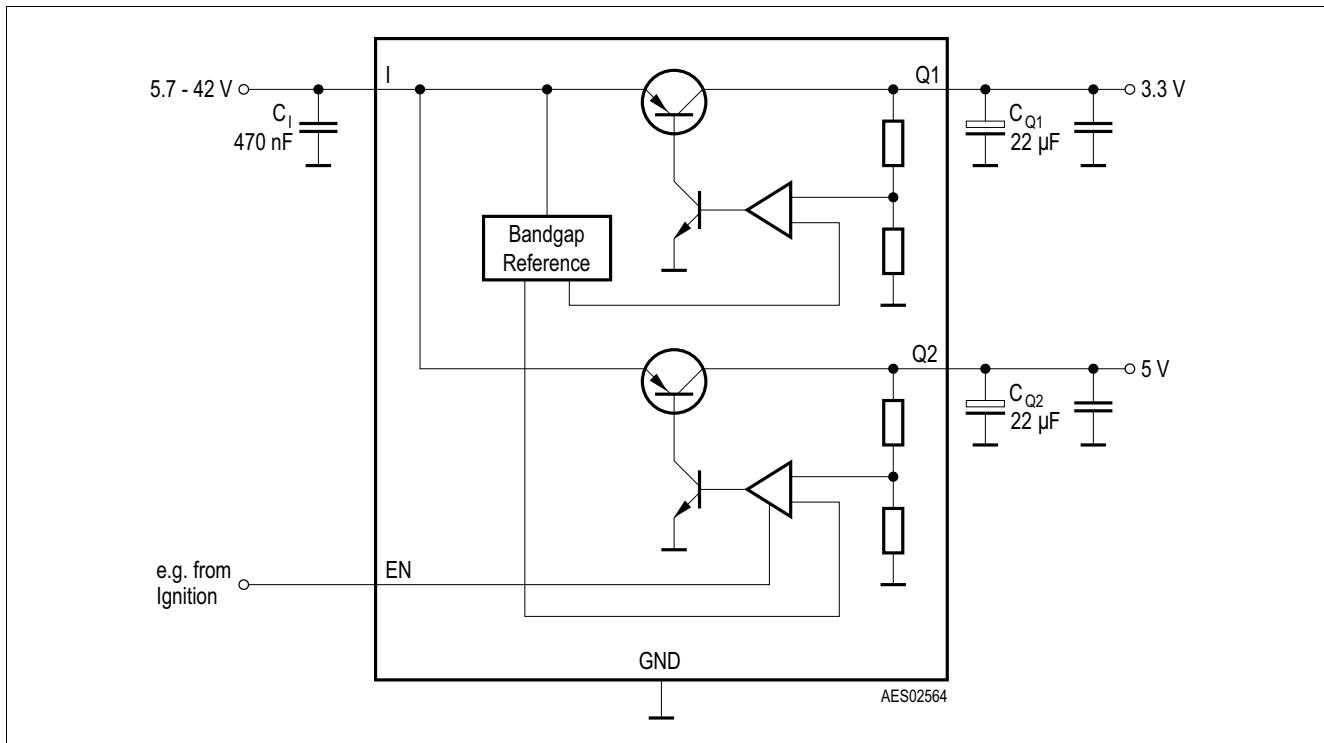

Figure 3 Application diagram

5.2 Selection of external components

5.2.1 Input, output

The input capacitor C_1 is necessary for compensating line influences. Using a resistor of approx. $1\ \Omega$ in series with C_1 , the LC circuit of input inductivity and input capacitance can be damped. To stabilize the regulation circuits of the stand-by and main regulator, output capacitors C_{Q1} and C_{Q2} are necessary. Stability is guaranteed at values, $C_{Q1} \geq 10\ \mu\text{F}$ ($\text{ESR} \leq 2\ \Omega$) and $C_{Q2} \geq 10\ \mu\text{F}$ ($\text{ESR} \leq 3\ \Omega$) within the operating temperature range.

5.2.2 Enable

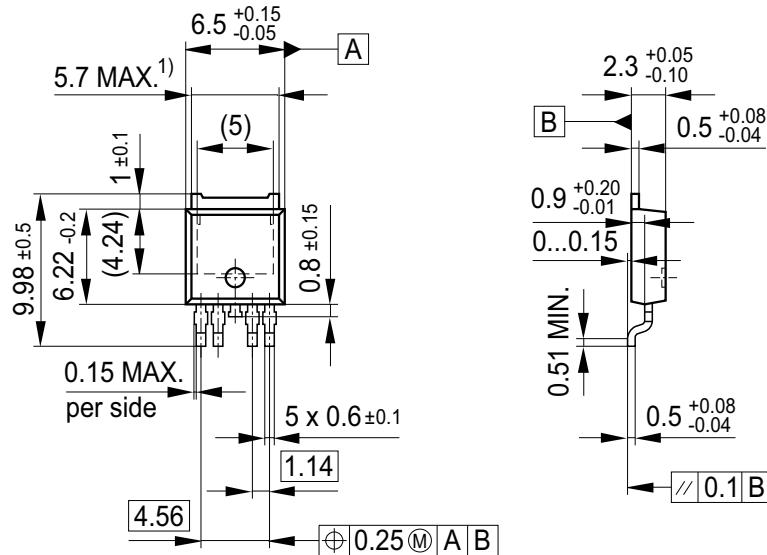

Using the enable feature output 2 (5 V output) can be switched ON or OFF. The enable input can be connected directly to terminal 30 (battery line) or 15 (ignition line). It is also possible to control the output 2 via the microcontroller.

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations, the device is available as a Green Product. Green Products are RoHS compliant (Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
