

TPS22920x 3.6-V, 4-A, 5.3-mΩ On-Resistance, Integrated Load Switch with Controlled Turn-on

1 Features

- Input Voltage Range: 0.75 V to 3.6 V
- Integrated Load Switch
- Integrated Pass-FET $r_{DS(ON)} = 2\text{ m}\Omega$ (Typ) at 3.6 V
- Typical ON-Resistance
 - $r_{ON} = 5.3\text{ m}\Omega$ at $V_{IN} = 3.6\text{ V}$
 - $r_{ON} = 5.4\text{ m}\Omega$ at $V_{IN} = 2.5\text{ V}$
 - $r_{ON} = 5.5\text{ m}\Omega$ at $V_{IN} = 1.8\text{ V}$
 - $r_{ON} = 5.8\text{ m}\Omega$ at $V_{IN} = 1.2\text{ V}$
 - $r_{ON} = 6.1\text{ m}\Omega$ at $V_{IN} = 1.05\text{ V}$
 - $r_{ON} = 7.3\text{ m}\Omega$ at $V_{IN} = 0.75\text{ V}$
- CSP-8 Package 0.9 mm × 1.9 mm, 0.5 mm Pitch
- 4-A Maximum Continuous Switch Current
- Shutdown Current 5.5-μA Max
- ON-Logic Available in Both Active High/Low:
 - TPS22920 is Active High
 - TPS22920L is Active Low
- Low Threshold Control Input
- Controlled Slew-Rate to Avoid Inrush Current
- Quick Output Discharge Resistor
- ESD Performance Tested Per JESD 22
 - 4000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)

2 Applications

- Notebook / Netbook Computer
- Tablet PC
- PDAs / Smartphones
- GPS Navigation Devices
- MP3 Players

3 Description

The TPS22920x is a small, space-saving load switch with controlled turn on to reduce inrush current. The device contains a N-channel MOSFET that can operate over an input voltage range of 0.75 V to 3.6 V and switch currents up to 4 A. An integrated charge pump biases the NMOS switch in order to achieve a minimum switch ON resistance (r_{ON}). The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals.

The TPS22920x has a 1250-Ω on-chip resistor for quick output discharge when the switch is turned off which insures that the output is not left floating.

The TPS22920x has an internally controlled rise time in order to reduce inrush current.

The TPS22920x is available in an ultra-small, space-saving 8-pin CSP package and is characterized for operation over the free-air temperature range of –40°C to 85°C.

Device Information⁽¹⁾

• Updated swapped image issue.	7

5 Device Comparison Table

ORDERABLE PART NUMBER	R _{ON} (TYP) AT 3.6 V	RISE TIME (TYP) at 3.6V	QUICK OUTPUT DISCHARGE ⁽¹⁾	BACKSIDE COATING ⁽²⁾	ENABLE
TPS22920YZPR	5.3 mΩ	880 μS	Yes	No	Active High
TPS22920YZPRB	5.3 mΩ	880 μS	Yes	Yes	Active High
TPS22920LYZPR	5.3 mΩ	627 μS	Yes	Yes	Active Low

- (1) This feature discharges the output of the switch to ground through a 1250-Ω resistor, preventing the output from floating. See [Output Pull-Down](#).
- (2) CSP (DSBGA) devices manufactured with backside coating have an increased resistance to cracking due to the increased physical strength of the package. Devices with backside coating are highly encouraged for new designs.

6 Pin Configuration and Functions

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
GND	D1	-	Ground
ON	D2	I	Switch control input. Do not leave floating
V _{OUT}	A1, B1, C1	O	Switch output
V _{IN}	A2, B2, C2	I	Switch input, bypass this input with a ceramic capacitor to ground

Table 1. Bump Assignments (YZP Package)

D	GND	ON
C	V _{OUT}	V _{IN}
B	V _{OUT}	V _{IN}
A	V _{OUT}	V _{IN}
	1	2

7 Specifications

7.1 Absolute Maximum Ratings⁽¹⁾

		MIN	MAX	UNIT
V _{IN}	Input voltage range	–0.3	4	V
V _{OUT}	Output voltage range		V _{IN} + 0.3	V
V _{ON}	Input voltage range	–0.3	4	V
I _{MAX}	Maximum Continuous Switch Current		4	A
I _{PLS}	Maximum Pulsed Switch Current, pulse <300 μs, 2% duty cycle		6	A
T _J	Maximum junction temperature		125	°C
T _{stg}	Storage temperature range	–65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress only, and functional operation of the device at these or any other conditions beyond those indicated under [Recommended Operating Conditions](#) is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±4000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

7.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V _{IN}	Input voltage range	0.75	3.6	V
V _{OUT}	Output voltage range		V _{IN}	V
V _{IH}	High-level input voltage, ON	V _{IN} = 2.5 V to 3.6 V	1.2	3.6
		V _{IN} = 0.75 V to 2.49 V	0.9	3.6
V _{IL}	Low-level input voltage, ON	V _{IN} = 2.5 V to 3.6 V		0.6
		V _{IN} = 0.75 V to 2.49 V		0.4
T _A	Operating free-air temperature range	–40	85	°C

9 Detailed Description

9.1 Overview

The TPS22920x is a single channel, 4-A load switch in a small, space-saving CSP-8 package. This device implements a low resistance N-channel MOSFET with a controlled rise time for applications that need to limit the inrush current.

This device is also designed to have very low leakage current during off state, which prevents downstream circuits from pulling high standby current from the supply. Integrated control logic, driver, power supply, and output discharge FET eliminates the need for additional external components, which reduces solution size and bill of materials (BOM) count.

9.2 Functional Block Diagram

9.3 Feature Description

9.3.1 ON/OFF Control

The ON pin controls the state of the switch. For TPS22920, asserting ON high enables the switch. For TPS22920L, asserting ON low enables the switch. ON has a low threshold, making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2-V, 1.8-V, 2.5-V or 3.3-V GPIOs.

9.3.2 Output Pull-Down

The output pull-down is active when the user is turning off the main pass FET. The pull-down discharges the output rail to approximately 10% of the rail, and then the output pull-down is automatically disconnected to optimize the shutdown current.

9.4 Device Functional Modes

ON	TPS22920		TPS22920L	
	V_{IN} to V_{OUT}	V_{OUT} to GND ⁽¹⁾	V_{IN} to V_{OUT}	V_{OUT} to GND ⁽¹⁾
Logic Low	OFF	ON	ON	OFF
Logic High	ON	OFF	OFF	ON

(1) See [Output Pull-Down](#).

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

10.1.1 Input Capacitor

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor or short-circuit, a capacitor needs to be placed between V_{IN} and GND. A 1- μ F ceramic capacitor, C_{IN} , placed close to the pins is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop.

10.1.2 Output Capacitor

A C_{IN} greater than C_L is highly recommended due to the integral body diode in the NMOS switch. A C_L greater than C_{IN} can cause V_{OUT} to exceed V_{IN} when the system supply is removed. This could result in current flow through the body diode from V_{OUT} to V_{IN} . A C_{IN} to C_L ratio of 10 to 1 is recommended for minimizing V_{IN} dip caused by inrush currents during startup.

10.2 Typical Application

Figure 43. Typical Application Circuit

10.2.1 Design Requirements

DESIGN PARAMETER	EXAMPLE VALUE
V_{IN}	3.3 V
C_L	4.7 μ F
Maximum Acceptable Inrush Current	40 mA

10.2.2 Detailed Design Procedure

10.2.2.1 VIN to VOUT Voltage Drop

The VIN to VOUT voltage drop in the device is determined by the R_{ON} of the device and the load current. The R_{ON} of the device depends upon the VIN condition of the device. Refer to the R_{ON} specification of the device in the [Electrical Characteristics](#) table of this datasheet. Once the R_{ON} of the device is determined based upon the VIN conditions, use [Equation 1](#) to calculate the VIN to VOUT voltage drop:

$$\Delta V = I_{LOAD} \times R_{ON}$$

where

- ΔV = Voltage drop from VIN to VOUT
- I_{LOAD} = Load current
- R_{ON} = On-resistance of the device for a specific V_{IN}
- An appropriate I_{LOAD} must be chosen such that the I_{MAX} specification of the device is not violated. (1)

10.2.2.2 Managing Inrush Current

The output capacitors must be charged up from 0-V to V_{IN} when the switch is enabled. This charge arrives in the form of inrush current. Inrush current may be calculated using the following equation:

$$\text{Inrush Current} = C \times \frac{dv}{dt}$$

where

- C = Output capacitance
- $\frac{dv}{dt}$ = Output slew rate (2)

The TPS22920x offers a very slow controlled rise time for minimizing inrush current. This device can be selected based upon the maximum acceptable slew rate which can be calculated using the design requirements and the inrush current equation. An output capacitance of 4.7 μF will be used since the amount of inrush increases with output capacitance:

$$40\text{mA} = 4.7\mu\text{F} \times \frac{dv}{dt} \quad (3)$$

$$\frac{dv}{dt} = 8.5\text{V/ms} \quad (4)$$

A device with a slew rate less than 8.5 V/ms must be used to ensure an inrush current of less than 40 mA.

The TPS22920 has a typical rise time of 880 μs at 3.3 V. This results in a slew rate of 3.75 V/ms which meets the [Design Requirements](#).

10.2.3 Application Curves

11 Power Supply Recommendations

The device is designed to operate from a V_{IN} range of 0.75 V to 3.6 V. The V_{IN} power supply must be well regulated and placed as close to the V_{IN} terminal as possible. The power supply must be able to withstand all transient load current steps. In most situations, using the minimum recommended input capacitance of 1 μ F is sufficient to prevent the supply voltage from dipping when the switch is turned on. In cases where the power supply is slow to respond to a large transient current or large load current step, additional bulk capacitance may be required on the input.

12 Layout

12.1 Layout Guidelines

All traces should be as short as possible for best performance. The input and output capacitors must be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for V_{IN} , V_{OUT} , and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

YZP0008

PACKAGE OUTLINE

DSBGA - 0.5 mm max height

DIE SIZE BALL GRID ARRAY

4223082/A 07/2016

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

EXAMPLE BOARD LAYOUT

YZP0008

DSBGA - 0.5 mm max height

DIE SIZE BALL GRID ARRAY

LAND PATTERN EXAMPLE
SCALE:40X

SOLDER MASK DETAILS
NOT TO SCALE

4223082/A 07/2016

NOTES: (continued)

3. Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints.
For more information, see Texas Instruments literature number SNVA009 (www.ti.com/lit/snva009).

EXAMPLE STENCIL DESIGN

YZP0008

DSBGA - 0.5 mm max height

DIE SIZE BALL GRID ARRAY

SOLDER PASTE EXAMPLE
BASED ON 0.1 mm THICK STENCIL
SCALE:40X

4223082/A 07/2016

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.
