

## 7-CHANNEL, 1:2 VIDEO SWITCH WITH INTEGRATED LEVEL SHIFTERS

Check for Samples: [TS3V713EL](#)

### FEATURES

- Supports 7-channel VGA Signals (R, G, B, H<sub>SYNC</sub>, V<sub>SYNC</sub>, DDC CLK, and DDC DAT)
- Operating Voltage
  - V<sub>DD</sub> = 3.3 V ±10%
  - V<sub>DD\_5</sub> = 5 V ±10%
- High Bandwidth of 1.3 GHz (–3 dB)
- R, G, B Switches
  - R<sub>ON</sub> = 4 Ω (Typ.)
  - C<sub>ON</sub> = 8 pF (Typ.)
- Integrated Level Shifting Buffers for H<sub>SYNC</sub> and V<sub>SYNC</sub> Channels
- Voltage Clamping NMOS Switches for SCL and SDA Channels
- ESD Performance (Pins 12–15, 17–22, 24–27)
  - ±2-kV Contact Discharge (IEC61000-4-2)
  - 8 kV Human Body Model (JESD22-A114E)
- ESD Performance (All Pins)
  - 4 kV Human Body Model (JESD22-A114E)
- 32-Pin Quad Flat Pack No-Lead (QFN) Package

The exposed center pad must be connected to GND.

### APPLICATIONS

- Notebook Computers
- Docking Stations
- KVM Switches

### DESCRIPTION/ORDERING INFORMATION

The TS3V713EL is a high bandwidth, 7-channel video multiplexer/demultiplexer for switching between a single VGA source and one of two end points. The device is designed for ensuring video signal integrity and minimizing video signal attenuation by providing high bandwidth of 1.3 GHz.

The TS3V713EL has integrated level shifting buffers for the H<sub>SYNC</sub> and V<sub>SYNC</sub> signals which provide voltage level translation between 3.3V and 5V logic. The SCL and SDA lines use NMOS switches which clamp the output voltage to 1 V below V<sub>DD</sub>.

The video signals are protected against ESD with integrated diodes to V<sub>DD</sub> and GND that support levels up to ±2 kV Contact Discharge (IEC61000-4-2) and 8 kV Human Body Model (JESD22-A114E).

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) The package thermal impedance is calculated in accordance with JESD 51-1.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

### THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).
