

# $\mu$ A101A • $\mu$ A201A • $\mu$ A301A

## General Purpose Operational Amplifiers

Linear Division Operational Amplifiers

### Description

The  $\mu$ A101A,  $\mu$ A201A, and  $\mu$ A301A are general purpose monolithic operational amplifiers constructed using the Fairchild Planar Epitaxial process. These integrated circuits are intended for applications requiring low input offset voltage or low input offset current. The accuracy of long interval integrators, timers, and sample-and-hold circuits is improved due to the low drift and low bias currents of the  $\mu$ A101A,  $\mu$ A201A, or  $\mu$ A301A. Frequency response may be matched to the individual circuit need with one external capacitor. The absence of latch up coupled with internal short circuit protection make the  $\mu$ A101A,  $\mu$ A201A and  $\mu$ A301A virtually foolproof.

- Low Offset Current And Voltage
- Low Offset Current Drift
- Low Bias Current
- Short Circuit Protected
- Low Power Consumption

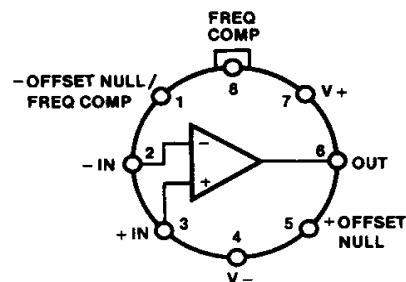

### Absolute Maximum Ratings

|                                            |                 |
|--------------------------------------------|-----------------|
| Storage Temperature Range                  |                 |
| Metal Can                                  | -65°C to +175°C |
| Molded DIP and SO-8                        | -65°C to +150°C |
| Operating Temperature Range                |                 |
| Extended ( $\mu$ A101AM)                   | -55°C to +125°C |
| Industrial ( $\mu$ A201AV)                 | -25°C to +85°C  |
| Commercial ( $\mu$ A301AC)                 | 0°C to +70°C    |
| Lead Temperature                           |                 |
| Metal Can (soldering, 60 s)                | 300°C           |
| Molded DIP and SO-8 (soldering, 10 s)      | 265°C           |
| Internal Power Dissipation <sup>1, 2</sup> |                 |
| 8L-Metal Can                               | 1.00 W          |
| 8L-Molded DIP                              | 0.93 W          |
| SO-8                                       | 0.81 W          |
| Supply Voltage                             |                 |
| $\mu$ A101A, $\mu$ A201A                   | $\pm 22$ V      |
| $\mu$ A301A                                | $\pm 18$ V      |
| Differential Input Voltage                 | $\pm 30$ V      |
| Input Voltage <sup>3</sup>                 | $\pm 15$ V      |
| Output Short Circuit Duration <sup>4</sup> | Indefinite      |

### Notes

1.  $T_J \text{ Max} = 150^\circ\text{C}$  for the Molded DIP and SO-8, and  $175^\circ\text{C}$  for the Metal Can.
2. Ratings apply to ambient temperature at  $25^\circ\text{C}$ . Above this temperature, derate the 8L-Metal Can at  $6.7 \text{ mW}/^\circ\text{C}$ , the 8L-Molded DIP at  $7.5 \text{ mW}/^\circ\text{C}$  and the SO-8 at  $6.5 \text{ mW}/^\circ\text{C}$ .
3. For supply voltage less than  $\pm 15$  V, the absolute maximum input voltage is equal to the supply voltage.
4. Short circuit may be ground or either supply.  $\mu$ A101A and  $\mu$ A201A ratings apply to  $+125^\circ\text{C}$  case temperature or  $+75^\circ\text{C}$  ambient temperature.  $\mu$ A301A ratings apply for case temperatures to  $70^\circ\text{C}$ .

## Compensation Circuits (Note 2)

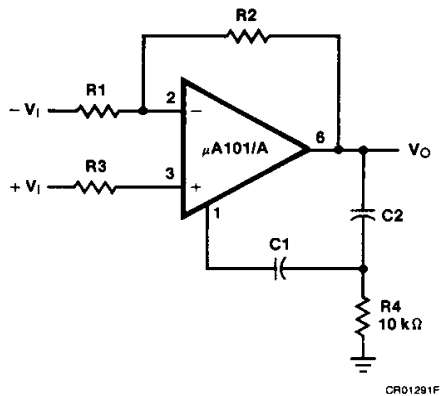

### Single Pole Compensation

$$C_1 \geq \frac{R_1 C_s}{R_1 + R_2}$$

$$C_s = 30 \text{ pF}$$

### Two Pole Compensation

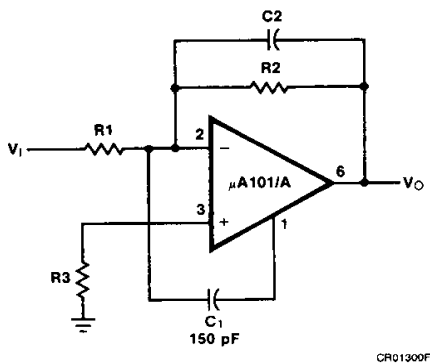

$$C_1 \geq \frac{R_1 C_s}{R_1 + R_2}$$

$$C_s = 30 \text{ pF}$$

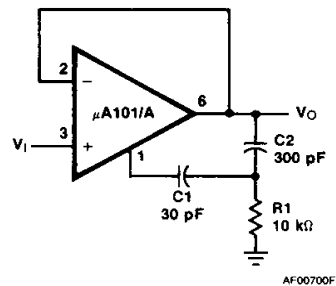

$$C_2 = 10 C_1$$

### Feed Forward Compensation

## Typical Applications (Note 2)

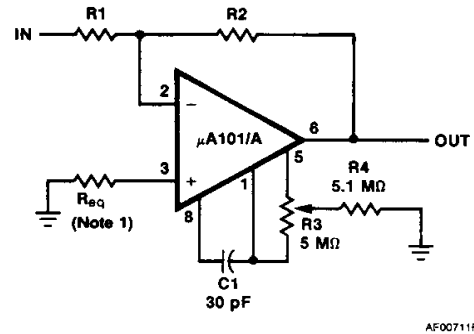

### Fast Voltage Follower

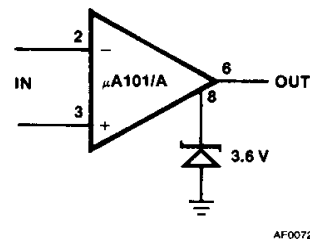

Power Bandwidth: 15 kHz

Slew Rate: 1 V/μs

### Inverting Amplifier With Balancing Circuit

### Voltage Comparator For Driving Or DTL Integrated Circuits

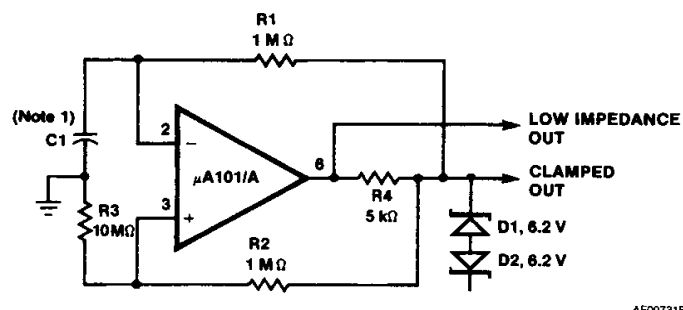

#### Notes

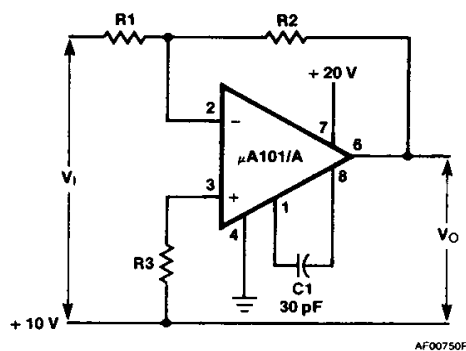

1. May be zero or equal to parallel combination of R1 and R2 for minimum offset.
2. All lead numbers shown refer to 8-lead metal package.

## Typical Applications (Cont.) (Note 2)

### Low Frequency Square Wave Generator

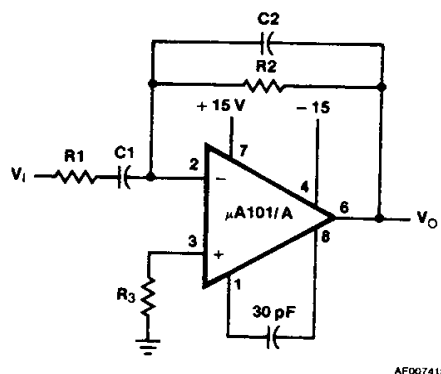

### Circuit For Operating Without A Negative Supply

#### Notes

1. Adjust C<sub>1</sub> for frequency
2. All lead numbers shown refer to 8-lead metal package

### Practical Differentiator

$$f_c = \frac{1}{2\pi R_2 C_1}$$

$$f_h = \frac{1}{2\pi R_1 C_1} = \frac{1}{2\pi R_2 C_2}$$

$$f_c < f_h < f_{\text{unity gain}}$$
