

μ A703

RF-IF AMPLIFIER

FAIRCHILD LINEAR INTEGRATED CIRCUITS

GENERAL DESCRIPTION — The μ A703 is a monolithic RF-IF Amplifier constructed using the Fairchild Planar* epitaxial process and is intended for use as a limiting or non-limiting amplifier, harmonic mixer, or oscillator to 150 MHz. The low internal feedback of the device insures a higher stability-limited gain than that available from conventional circuitry. Including the biasing network in the same package reduces the number of external components required, thereby increasing the reliability and versatility of the device.
