

BIPOLAR ANALOG INTEGRATED CIRCUITS

μ PC2757T, μ PC2758T

SILICON MMIC 1st FREQUENCY DOWN-CONVERTER FOR MOBILE COMMUNICATIONS

DESCRIPTION

The μ PC2757T and μ PC2758T are silicon monolithic integrated circuits designed as 1st down-converters for L band mobile communications. The ICs consist of mixer and local amplifier. The μ PC2757T features low current consumption and the μ PC2758T features improved intermodulation. From these two version, you can chose either IC corresponding to your system design.

The μ PC2757T and μ PC2758T are manufactured using NEC's 20 GHz fr NESAT™ III silicon bipolar process. This process uses silicon nitride passivation film and gold electrodes. These materials can protect chip surface from external pollution and prevent corrosion and migration. Thus, these products have excellent performance, uniformity and reliability.

FEATURES

- Wide band operation : $f_{RFin} = 0.1 \text{ GHz to } 2.0 \text{ GHz}$
- High-density surface mounting : 6-pin minimold
- Low voltage operation : Supply voltage 3.0 V TYP.
- Low power consumption 15 mW: μ PC2757T
- Power-save function : μ PC2757T, μ PC2758T

ORDERING INFORMATION

Part Number	Markings	Product Type	Package	Supplying Form
μ PC2757T-E3	C1X	Low power consumption	6-pin minimold	Embossed tape 8-mm wide. Pin 1, 2, 3 face to perforation side of the tape. QTY 3 kp/Reel.
μ PC2758T-E3	C1Y	High output IP_3		

Note To order evaluation samples, please contact local NEC sales office. (Part number for sample order: μ PC2757T, μ PC2758T)

Caution Electro-static sensitive devices

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

PIN EXPLANATION (BOTH μ PC2757T, 2758T)

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V) ^{Note}	Function and Application	Equivalent Circuit								
1	RF input	–	1.2	This pin is RF input for mixer designed as double balance type. This circuit contributes to suppress spurious signal with minimum LO and bias power consumption. Also this symmetrical circuit can keep specified performance insensitive to process-condition distribution.									
2	GND	GND	–	This pin is ground of IC. Must be connected to the system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible. (Track length should be kept as short as possible.)	–								
3	LO input	–	1.3	This pin is LO input for local buffer designed as differential amplifier. Recommendable input level is –15 to –0 dBm. Also this symmetrical circuit can keep specified performance insensitive to process-condition distribution.									
4	PS	V _{cc} /GND	–	<p>This pin is for power-save function. This pin can control ON/OFF operation with bias as follows;</p> <table border="1"><thead><tr><th></th><th>Bias: V</th><th>Operation</th></tr></thead><tbody><tr><td rowspan="2">V_{PS}</td><td>≥ 2.5</td><td>ON</td></tr><tr><td>0 to 0.5</td><td>OFF</td></tr></tbody></table> <p>Rise time/fall time using this pin are approximately 10 μs.</p>		Bias: V	Operation	V _{PS}	≥ 2.5	ON	0 to 0.5	OFF	
	Bias: V	Operation											
V _{PS}	≥ 2.5	ON											
	0 to 0.5	OFF											
5	V _{cc}	2.7 to 3.3	–	Supply voltage 3.0 ±0.3 V for operation. Must be connected bypass capacitor. (example: 1 000 pF) to minimize ground impedance.	–								
6	IF output	–	1.7	This pin is output from IF buffer amplifier designed as single-ended push-pull type. This pin is assigned for emitter follower output with low-impedance. In the case of connecting to high-impedance stage, please attach external matching circuit.									

Note Each pin voltage is measured with V_{cc} = 3.0 V

ABSOLUTE MAXIMUM RATINGS

APPLICATION

This IC is guaranteed on the test circuit constructed with 50 Ω equipment and transmission line.

This IC, however, does not have 50 Ω input/output impedance, but electrical characteristics such as conversion gain and intermodulation distortion are described herein on these conditions without impedance matching. So, you should understand that conversion gain and intermodulation distortion at input level will vary when you improve VS of RF input with external circuit (50 Ω termination or impedance matching).

External circuits of the IC can be referred to following application notes.

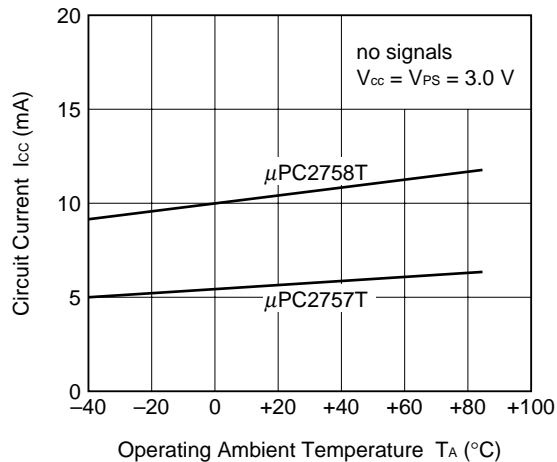

- To RF and IF port: μ PC2757, μ PC2758, μ PC8112 application note (Document No. P11997E)

PACKAGE DIMENSIONS

6 PIN MINIMOLD (Unit: mm)

NOTE ON CORRECT USE

- (1) Observe precautions for handling because of electrostatic sensitive devices.
- (2) Form a ground pattern as wide as possible to minimize ground impedance (to prevent undesired oscillation).
- (3) Keep the track length of the ground pins as short as possible.
- (4) Connect a bypass capacitor (example: 1 000 pF) to the V_{CC} pin.

RECOMMENDED SOLDERING CONDITIONS

This product should be soldered under the following recommended conditions. For soldering methods and conditions other than those recommended below, contact your NEC sales representative.

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared Reflow	Package peak temperature: 235 °C or below Time: 30 seconds or less (at 210 °C) Count: 3, Exposure limit: None ^{Note}	IR35-00-3
VPS	Package peak temperature: 215 °C or below Time: 40 seconds or less (at 200 °C) Count: 3, Exposure limit: None ^{Note}	VP15-00-3
Wave Soldering	Soldering bath temperature: 260 °C or below Time: 10 seconds or less Count: 1, Exposure limit: None ^{Note}	WS60-00-1
Partial Heating	Pin temperature: 300 °C Time: 3 seconds or less (per side of device) Exposure limit: None ^{Note}	—

Note After opening the dry pack, keep it in a place below 25 °C and 65 % RH for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

For details of recommended soldering conditions for surface mounting, refer to information document SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL (C10535E).

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
- NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
- Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
- While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
- NEC devices are classified into the following three quality grades:
"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.
