DESCRIPTION

The UT54ACTS245E is a non-inverting octal bus transceiver designed for asynchronous two-way communication between data buses. The control function implementation minimizes external timing requirements.

The device allows data transmission from the A bus to the B bus or from the B bus to the A bus depending upon the logic level at the direction control (DIR) input. The enable input (\overline{G}) disables the device so that the buses are effectively isolated.

The device is characterized over full HiRel temperature range of -55°C to +125°C.
